ChromeOS-Administrator Reliable Test Tutorial - ChromeOS-Administrator Passguide

You have an option to try the ChromeOS-Administrator exam dumps demo version and understand the full features before purchasing. You can download the full features of ChromeOS-Administrator PDF Questions and practice test software right after the payment. PDFVCE has created the three best formats of ChromeOS-Administrator practice questions. These Formats will help you to prepare for and pass the Google ChromeOS-Administrator Exam. ChromeOS-Administrator pdf dumps format is the best way to quickly prepare for the ChromeOS-Administrator exam. You can open and use the Professional ChromeOS Administrator Exam pdf questions file at any place. You don't need to install any software.

Google Professional ChromeOS Administrator Exam Sample Questions (Q90-

Q95):

NEW QUESTION # 90

You are tasked with reducing the risk of a breach of your organization's identities. What should you do to minimize the risk?

- A. Set up Single Sign-On (SSO)
- B. Configure individual Google Accounts
- C. Set up Client-side encryption
- D. Connect your LDAP

Answer: A

Explanation:
Setting up Single Sign-On (SSO) significantly reduces identity risks by centralizing authentication through a secure, verified identity provider (IdP). This method helps ensure consistent password policies, multi-factor authentication (MFA), and robust security practices. It also minimizes the risk of password reuse and phishing.
Verified Answer from Official Source:
The correct answer is verified from the Google Workspace Security Guide, which recommends implementing SSO to manage authentication securely.
"Single Sign-On (SSO) allows users to access multiple applications with a single set of credentials, reducing the risk of identity breaches by centralizing authentication." SSO enhances security by integrating with trusted IdPs, implementing MFA, and reducing credential exposure across multiple applications.
Objectives:
* Strengthen identity and access management (IAM).
* Implement secure authentication practices with SSO.

NEW QUESTION # 91

Your organization is buying new ChromeOS devices to replace older devices. You are receiving these devices and need to dispose of them responsibly. What should you do to each of these devices before disposing of them?

- A. Suspend the devices
- B. Disable the devices
- C. Deprovision the devices
- D. Factory reset the devices

Answer: C

Explanation:
Before disposing of ChromeOS devices, it is essential to deprovision them. Deprovisioning removes the device from the enterprise management console and ensures that it is no longer associated with the organization. This step protects organizational data and licenses.
Verified Answer from Official Source:
The correct answer is verified from the Google Admin Console Device Management Guide, which advises deprovisioning before device disposal.
"Deprovisioning a device ensures it is no longer managed and releases any associated licenses. This is essential before disposing of the device." Deprovisioning is crucial for both security and compliance, as it guarantees that no residual management settings remain on the device.
Objectives:
* Securely retire ChromeOS devices.
* Protect organizational data during device disposal.

NEW QUESTION # 92

You are migrating an organization from Windows devices. Part of the migration process involves setting up the existing suite of business applications for use with ChromeOS, leveraging cloud technologies whenever possible. Which of these would be the preferred option when choosing the type of solution to deploy?

- A. Go to the Google Play Store and deploy the Android client of the app in question.
- B. Check to see if there's a web application equivalent that provides all the necessary features and, if so, deploy the URL through the Admin console.

- C. Write a tutorial on how to install each of the applications using the Linux terminal and ask users to follow those instructions when first using their new device.
- D. Deploy the legacy client in a virtualization solution and use that to stream the application to the ChromeOS devices.

Answer: B

Explanation:
The best practice when migrating from Windows to ChromeOS is to utilize web applications whenever possible. Web apps offer seamless integration with ChromeOS, are easy to manage, and do not require local installation or compatibility adjustments.
Verified Answer from Official Source:
The correct answer is verified from the Google ChromeOS Migration Guide, which advises using web-based solutions for cross-platform compatibility and centralized management.
"When migrating from traditional desktop environments, prioritize using web applications that mirror the existing functionality, as they are compatible with ChromeOS and easy to manage." Web applications reduce the need for complex installations and provide access from any ChromeOS device, ensuring a smooth transition during migration.
Objectives:
* Migrate business applications efficiently to ChromeOS.
* Leverage cloud technologies for better compatibility.

NEW QUESTION # 93
How do you validate Chrome policies on a managed device?

- A. In the browser, go to chrome://policy to confirm that the device is receiving both user and device policy
- B. Download device logs
- C. Go to the admin console and look up the policies
- D. In the browser, go to policy://chrome to confirm that the device is receiving both user and device policy

Answer: A

Explanation:
To check which policies are applied to a ChromeOS device, navigate to chrome://policy in the Chrome browser. This page displays a list of all policies applied to the device, including both user-specific and device- specific policies. This is the most accurate way to verify that the device is receiving the correct policies from the Google Admin console.
Verified Answer from Official Source:
The correct answer is verified from the Google Chrome Enterprise Policy Guide, which recommends using the chrome://policy URL to review current policy settings on a device.
"To see the policies applied to a ChromeOS device, open Chrome and go to chrome://policy. This page lists both user and device policies that are currently enforced." This method allows administrators to validate the application of policies directly on the device, confirming that updates from the Admin console have been successfully applied.
Objectives:
* Validate policy application on managed ChromeOS devices.
* Use chrome://policy to troubleshoot policy issues.

NEW QUESTION # 94
How would you deploy a Progressive Web Application to all managed user accounts?

- A. Force-install the Progressive Web Application URL in the "Chrome Apps & extensions" page
- B. Set up Chrome Imprivata shared apps & extensions to force-install the Progressive Web Application URL
- C. Open "Additional Google services" to force-install the Progressive Web Application URL
- D. Go to "User & Browser Settings" and add the Progressive Web Application URL in the "Legacy Browser Support" site list

Answer: A

NEW QUESTION # 95
......

Obtaining a ChromeOS-Administrator certificate can prove your ability so that you can enhance your market value. When you want

to correct the answer after you finish learning, the correct answer for our ChromeOS-Administrator test prep is below each question, and you can correct it based on the answer. In addition, we design small buttons, which can also show or hide the ChromeOS-Administrator Exam Torrent, and you can flexibly and freely choose these two modes according to your habit. In short, you will find the convenience and practicality of our ChromeOS-Administrator quiz guide in the process of learning. We will also continue to innovate and improve functions to provide you with better services.
