### CMT Association CMT Level 1 Exam Sample Questions (Q108-Q113):

#### NEW QUESTION # 108

The resistance level of a price trend refers to:

- **A. The level over the market where selling pressure is sufficiently strong to overcome buying pressure and a price advance is expected to be turned back**
- B. The boundaries of the trading range of the trend
- C. The target price indicated by the count
- D. The level under the market where buying interest is sufficiently strong to overcome selling pressure

**Answer: A**

Explanation:

Detailed Explanation:

Resistance is defined as a price level above the current market price where selling interest is strong enough to overcome buying

pressure, causing the price advance to halt or reverse. Option A describes support.89

#### NEW QUESTION # 109

Which type of gap is LEAST likely to be filled when it occurs with high volume?

- A. Common
- B. Exhaustion
- C. Runaway
- D. Breakaway

**Answer: D**

Explanation:

Detailed Explanation:

A Breakaway Gap signals the start of a new major trend (breaking out of a consolidation). Because it represents a significant shift in supply/demand and the start of a new momentum phase, it is the least likely to be filled in the near term. Common gaps fill almost immediately.

#### NEW QUESTION # 110

Jessy found that the volume shown by the indicator 'On-balance Volume' was negative. What can she conclude from this observation?

- A. The calculation of indicator is wrong. There cannot be negative volume
- B. On-balance volume is always negative. Nothing can be concluded from this
- C. When shares change hand, the volume is negative for the seller, so it is from seller's account
- D. It indicates the bearishness in the underlying

**Answer: D**

Explanation:

Detailed Explanation:

OBV is a cumulative total. It adds volume on up days and subtracts volume on down days. If the cumulative value is negative, it implies that over the measurement period, the volume on down days has exceeded volume on up days, indicating net distribution or bearishness.

#### NEW QUESTION # 111

As per the theory of contrary opinion, a high degree of consensus normally precedes a:

- A. Trend reversal
- B. Trend continuation
- C. Short-term consolidation
- D. Pause within an existing trend

**Answer: A**

Explanation:

Detailed Explanation:

When consensus is high (e.g., 90% bullish), the market is saturated. The trend cannot continue because there are no new buyers. This extreme sentiment typically marks a market top (or bottom), preceding a major trend reversal.

#### NEW QUESTION # 112

The Kondratieff cycle extends for a period of about:

- A. 60 years
- B. 50 years
- C. 54 years
