If you want to buy our CS0-002 study guide in a preferential price, that's completely possible. In order to give back to the society, our company will prepare a number of coupons on our official website. Once you enter into our websites, the coupons will be very conspicuous. Remember to write down your accounts and click the coupon. When you pay for our CS0-002 Training Material, the coupon will save you lots of money. The number of our free coupon is limited. So you should click our website frequently. What's more, our coupon has an expiry date. You must use it before the deadline day. What are you waiting for? Come to buy our CS0-002 practice test in a cheap price.

CompTIA CySA+ certification is a valuable certification for IT professionals who want to advance their career in the field of cybersecurity. The new version of the certification exam, CS0-002, is designed to test the candidate's knowledge and skills in various areas of cybersecurity, making it a comprehensive certification. Candidates who are looking to prepare for the exam can take advantage of various training resources and study materials available online or in-person.

CompTIA CySA+ certification exam (CS0-002) is a performance-based exam that tests the skills required to perform the tasks of a cybersecurity analyst. CS0-002 Exam consists of a maximum of 85 multiple-choice and performance-based questions that must be completed within 165 minutes. CS0-002 exam covers a variety of topics, including threat management, vulnerability management, cyber incident response, and security architecture and toolsets.

CompTIA Cybersecurity Analyst (CySA+) Certification Exam Sample Questions (Q304-Q309):

NEW QUESTION # 304

A company's domain has been spoofed in numerous phishing campaigns. An analyst needs to determine the company is a victim of domain spoofing, despite having a DMARC record that should tell mailbox providers to ignore any email that fails DMARC upon

review of the record, the analyst finds the following:

Which of the following BEST explains the reason why the company's requirements are not being processed correctly by mailbox providers?

- A. The DMARC record does not have an SPF alignment tag.
- B. The DMARC record's DKIM alignment tag is incorrectly configured.
- C. The DMARC record's version tag is set to DMARC1 instead of the current version, which is DMARC3.
- D. The DMARC record's policy tag is incorrectly configured.

Answer: A

NEW QUESTION # 305

A suite of three production servers that were originally configured identically underwent the same vulnerability scans. However, recent results revealed the three servers has different critical vulnerabilities. The servers are not accessible by the Internet, and AV programs have not detected any malware. The servers' syslog files do not show any unusual traffic since they were installed and are physically isolated in an off-site datacenter. Checksum testing of random executables does not reveal tampering. Which of the following scenarios is MOST likely?

- A. Servers have been attacked by outsiders using zero-day vulnerabilities
- B. Servers have received different levels of attention during previous patch management events
- C. Servers have not been scanned with the latest vulnerability signature
- D. Servers were made by different manufacturers

Answer: B

NEW QUESTION # 306

A security analyst is running a routine vulnerability scan against a web farm. The farm consists of a single server acting as a load-balancing reverse proxy and offloads cryptographic processes to the backend servers. The backend servers consist of four servers that process the inquiries for the front end.

Vulnerability	Risk	Time	Host
SSL Expiration Less Than 90 days	Low	12:45	farm.company.com
SSL Certificate Hostname Mismatch	Medium	12:58	backend1.local
SSL Certificate Hostname Mismatch	Medium	13:11	backend2.local
SSL Certificate Hostname Mismatch	Medium	13:24	backend3.local
SSL Certificate Hostname Mismatch	Medium	13:37	backend4.local

A web service SSL query of each server responds with the same output:

Connected (0x000003)

depth=0 /0=farm.company.com/CN=farm.company.com/OU=Domain Control Validated Which of the following results BEST addresses these findings?

- A. Create an exception in the vulnerability scanner, as the results and false positives and can be ignored safely
- B. Require that the application development team renews the farm certificate and includes a wildcard for the 'local' domain in the certificate SAN field
- C. Notify the application development team of the findings and advise management of the results
- D. Advise the application development team that the SSL certificates on the backend servers should be revoked and reissued to match their hostnames

Answer: A

NEW QUESTION # 307

Given the Nmap request below:

```

Can't find nmap -p 22,110,135,143 www.scannable.org -u --packet-size
Starting Nmap (http://nmap.org)
map scan report for www.scannable.org
ENT(0.0149s) ICMP SCANNER > SCANNABLE
cho request (type=8/code=0) TTL=52 ID=1929
ENT(0.0112s) TCP SCANNER:63541 > SCANNABLE:80 iplen=40 seq=99850910
CVC(0.0179s) ICMP SCANNABLE > SCANNER echo reply(type=0/code=0 iplen=28 seq=99850910)
e got a ping back for SCANNABLE: ID=48822 seq=713 checksum=16000
assping done: num_host:1 num_response:1
initiating SYN STEALTH Scan against www.scannable.org (SCANNABLE) 3 ports at 00:47
ENT(0.0134s) TCP SCANNER:63517 > SCANNABLE:113 iplen=40 seq=1048634
ENT(0.0148s) TCP SCANNER:63517 > SCANNABLE:139 iplen=40 seq=1048634
ENT(0.0092s) TCP SCANNER:63517 > SCANNABLE:22 iplen=40 seq=1048634
CVD(0.0151s) TCP SCANNABLE:113 > SCANNER:63517 iplen=40 seq=1048634
CVD(0.0151s) TCP SCANNABLE:22 > SCANNER:63517 iplen=40 seq=1048634
ENT(0.0097s) TCP SCANNER:63517 > SCANNABLE:139 iplen=40 seq=1048634
the SYN STEALTH Scan took 1.25s to scan 3 total ports
map Report for www.scannable.org (SCANNABLE)

```

PORT	STATE	SERVICE
22/tcp	open	ssh
139/tcp	closed	auth
39/tcp	filtered	netbios-ssh
433/tcp	closed	ms-sql

map done:1 10.155.187.1 (1 host)

Which of the following actions will an attacker be able to initiate directly against this host?

- A. ARP spoofing
- **B. A brute-force attack**
- C. Password sniffing
- D. An SQL injection

Answer: B

NEW QUESTION # 308

Which of the following roles is ultimately responsible for determining the classification levels assigned to specific data sets?

- **A. Data owner**
- B. Senior management
- C. Data processor
- D. Data custodian

Answer: A
