## Fortinet NSE 7 - Public Cloud Security 7.6 Architect Sample Questions (Q14-Q19):

### NEW QUESTION # 14

Refer to the exhibit.

You have deployed a Linux EC2 instance in Amazon Web Services (AWS) with the settings shown on the exhibit. What next step must the administrator take to access this instance from the internet?

- A. Create a VIP on FortiGate to allow access.
- B. Enable SSH and allocate it to the device.
- C. Allocate an Elastic IP address and assign it to the instance.
- D. Configure the user name and password.

Answer: C

### NEW QUESTION # 15

While working with Terraform files, an administrator notices that some of the variables do not have their type explicitly declared.

```
variable "FortiGateSKU" {  
  type = map(any)  
  default = {  
    byol = "fortinet_fg-vm"  
    payg = "fortinet_fg-vm_payg_2023"  
  }  
}  
variable "vpccidr" {  
  description = "VPC address space"  
  default = "172.16.0.0/16"  
}
```

What type of variable is vpccidr in the exhibit?

- A. Set
- B. Number
- C. Map
- D. String

Answer: D

### NEW QUESTION # 16

An administrator would like to use FortiCNP to keep track of sensitive data files located in the Amazon Web Services (AWS) S3 bucket and protect it from malware. Which FortiCNP feature should the administrator use?

- A. FortiCNP Threat Detection policies
- B. FortiCNP Risk Management policies
- **C. FortiCNP Data Scan policies**
- D. FortiCNP Compliance policies

**Answer: C**

Explanation:

#### NEW QUESTION # 17

Your administrator instructed you to deploy an Azure vWAN solution to create a connection between the main company site and branch sites to the other company VNETs.

What is the best connection solution available between your company headquarters, branch sites, and the Azure vWAN hub?

- A. GRE tunnels
- **B. ExpressRoute**
- C. SSL VPN connections
- D. An L2TP connection

**Answer: B**

Explanation:

The best solution for connecting headquarters, branch sites, and Azure vWAN hubs is ExpressRoute, as it provides a private, reliable, and high-bandwidth connection directly into Azure, unlike VPN-based solutions such as L2TP, GRE, or SSL VPN.

#### NEW QUESTION # 18

Refer to the exhibit.

```
{
  "AWSTemplateFormatVersion" : "2010-09-09"
  "Resources" : {
    "FGT-HQ-1" : {
      "Type" : "AWS::EC2::Instance",
      "Properties" : {
        "ImageId" : "ami-01bd410bcaa617f44",
        "InstanceType" : "t2.xlarge",
      }
    }
  }
}
```

A senior administrator in a multinational organization needs to include a comment in the template shown in the exhibit to ensure that administrators from other regions change the Amazon Machine Image (AMI) ID to one that is valid in their location.

How can the administrator add the required comment in that section of the file?

- A. The administrator can add the comment starting with the # character next to the "Resources" section.
- B. The administrator can include the comment with the aws cloudformation update-stack command.
- **C. The administrator must convert the template file to YAML format to add a comment.**
- D. The administrator must update the AWSTemplateFormatVersion to the latest version.

**Answer: C**

Explanation:

According to the FortiOS 7.6 AWS Administration Guide and the Fortinet 7.4 Public Cloud Security study materials regarding infrastructure as code (IaC) for cloud deployments:

\* JSON Format Limitations (Option B): The exhibit shows an AWS CloudFormation template in JSON (JavaScript Object Notation) format. JSON, by its official specification, does not support comments. There is no native syntax (like // or /\* \*/) to include remarks that are ignored by the CloudFormation parser.

\* YAML Support: To add descriptive comments-such as instructing other regional administrators to update the AMI ID-the administrator must convert the template into YAML format. YAML is a superset of JSON and specifically supports comments using

the # character.

\* Best Practice for Multinational Deployments: For organizations operating across multiple AWS regions, using YAML is the recommended standard because it allows for inline documentation, making templates more maintainable and easier for different teams to understand regional requirements.

Why other options are incorrect:

\* Option A: Comments are part of the template file itself, not a parameter or flag within the aws cloudformation update-stack CLI command.

\* Option C: While # is the correct character for comments in YAML, it is invalid syntax in JSON and would cause the CloudFormation stack creation to fail with a parsing error.

\* Option D: The AWSTemplateFormatVersion "2010-09-09" is currently the only valid version for CloudFormation templates; updating it does not add JSON comment support.
