

Top 1Z0-1072-25 Sample Test Online Help You Clear Your Oracle 1Z0-1072-25: Oracle Cloud Infrastructure 2025 Architect Associate Exam Certainly

DOWNLOAD the newest Pass4guide 1Z0-1072-25 PDF dumps from Cloud Storage for free: <https://drive.google.com/open?id=11vYA6XGSSOqRkTD4EVNcHu7P74xnZxTp>

The development of science and technology makes our life more comfortable and convenient, which also brings us more challenges. Many company requests candidates not only have work experiences, but also some professional certifications. Therefore it is necessary to get a professional Oracle certification to pave the way for a better future. The 1Z0-1072-25 question and answers produced by our company, is helpful for our customers to pass their 1Z0-1072-25 exams and get the 1Z0-1072-25 certification within several days. Our 1Z0-1072-25 exam questions are your best choice.

Oracle 1Z0-1072-25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Identity and Access Management (IAM): This domain validates skills of security architects implementing granular access controls, emphasizing IAM policy creation, compartment organization, and dynamic group configuration. It covers identity domain management, network source restrictions, and tag-based access mechanisms to enforce least-privilege principles across OCI resources
Topic 2	<ul style="list-style-type: none">Compute: This section measures skills of cloud architects responsible for designing scalable and resilient infrastructure, covering compute instance configuration, autoscaling policies, and OS management. It evaluates understanding of OCI compute image options, infrastructure maintenance processes, and strategies for optimizing instance performance across availability domains.

Topic 3	<ul style="list-style-type: none"> • Storage: Designed for storage administrators managing enterprise data solutions, this section tests proficiency in deploying Block • File • Object Storage with lifecycle management, cross-region replication, and tiered storage strategies. It includes configuring volume groups, snapshots, versioning, and security controls while analyzing storage performance metrics and cost optimization techniques.
Topic 4	<ul style="list-style-type: none"> • Networking: Targeting network architects designing secure cloud architectures, this domain focuses on Virtual Cloud Network (VCN) implementation, including subnet design, IP address management, and routing through gateways (NAT, service, internet). It assesses expertise in VPN • FastConnect deployment, DNS configuration, load balancer setup, and advanced tools like Network Path Analyzer for troubleshooting latency or connectivity issues.

Valid 1Z0-1072-25 vce files, 1Z0-1072-25 dumps latest

We learned that a majority of the candidates for the 1Z0-1072-25 exam are office workers or students who are occupied with a lot of things, and do not have plenty of time to prepare for the 1Z0-1072-25 exam. Taking this into consideration, we have tried to improve the quality of our 1Z0-1072-25 training materials for all our worth. Now, I am proud to tell you that our 1Z0-1072-25 Training Materials are definitely the best choice for those who have been yearning for success but without enough time to put into it. There are only key points in our 1Z0-1072-25 training materials.

Oracle Cloud Infrastructure 2025 Architect Associate Sample Questions (Q30-Q35):

NEW QUESTION # 30

Which statement is NOT correct regarding the Oracle Cloud Infrastructure (OCI) File System snapshots?

- A. Snapshots are a consistent, point-in-time view of your file systems.
- B. Before you can clone a file system, at least one snapshot must exist for the file system.
- C. Even if nothing has changed within the file system since the last snapshot was taken, a new snapshot consumes more storage.
- D. Snapshots are accessible under the root directory of the file system at .snapshot/name.

Answer: C

Explanation:

In OCI File Storage, snapshots are point-in-time, read-only copies of a file system that do not immediately consume additional storage beyond the space needed to track changes.

Incorrect Statement: The statement that a new snapshot consumes more storage even if nothing has changed is incorrect. Snapshots are space-efficient; they only consume additional storage as changes are made to the file system after the snapshot is taken. If no changes are made between snapshots, the storage consumption remains minimal.

Correct Statements:

- B . Before cloning a file system, at least one snapshot must exist, as the clone operation relies on this snapshot to create a copy.
- C . Snapshots are accessible under the .snapshot directory, allowing users to view and restore files from specific snapshots.
- D . Snapshots provide a consistent, point-in-time view of the file system, ensuring data integrity.

Reference:

Oracle Cloud Infrastructure Documentation: Managing File System Snapshots

NEW QUESTION # 31

Why is the OCI Inter-Region Latency dashboard useful for optimizing data transfer and backup strategies?

- A. It provides real-time data specific to your tenancy's workloads.
- B. It's designed for troubleshooting latency issues within your specific applications.
- C. It focuses solely on latency within your own tenancy.

- **D. It offers a current and historical view of latency snapshots.**

Answer: D

Explanation:

The OCI Inter-Region Latency dashboard is useful for optimizing data transfer and backup strategies because it provides both current and historical views of latency snapshots between OCI regions. This information helps you understand the network performance between regions over time, allowing you to optimize the placement of resources and data transfer operations.

Optimization Use: By analyzing latency data, you can make informed decisions on where to store backups and how to efficiently transfer data across regions, potentially reducing costs and improving performance.

Reference:

Oracle Cloud Infrastructure Documentation: Inter-Region Latency Dashboard

NEW QUESTION # 32

How can OCI IAM be configured to facilitate cross-region access?

- A. Identity domain replication must be enabled.
- B. The identity domain automatically replicates to the other region.
- C. Users can access resources in all regions by default.
- **D. The administrator can grant users permissions to access specific resources in the other region.**

Answer: D

Explanation:

In Oracle Cloud Infrastructure (OCI), cross-region access is facilitated by configuring IAM policies that grant users or groups permissions to access resources in other regions. IAM policies in OCI are global, meaning they apply across all regions by default. However, an administrator can specifically configure these policies to allow or restrict access to resources in different regions.

Example: An administrator can write a policy that allows a user to manage compute instances in a specific region by including the region's name in the policy statement.

Reference:

Oracle Cloud Infrastructure Documentation: IAM Policies

NEW QUESTION # 33

You enabled Cross Region Replication for the volume and selected US West (San Jose) as the destination region. What should you do to create a new volume from the volume replica?

- **A. No action required. By default, the replica is available as a block volume.**
- B. Trigger the replica.
- C. Initiate the replica.
- D. Activate the replica.

Answer: A

Explanation:

When Cross-Region Replication is enabled for a block volume in Oracle Cloud Infrastructure (OCI), the replication process automatically creates and maintains a synchronized copy of the block volume in the selected destination region (in this case, US West (San Jose)).

Replica Availability: The replicated volume is immediately available as a block volume in the destination region. You do not need to take any additional action to activate or trigger the replica.

Creating New Volumes: Since the replica is automatically available as a block volume, you can directly use it to create a new volume in the destination region without any manual intervention.

Relevant OCI Documentation:

Cross-Region Block Volume Replication

This documentation outlines how cross-region replication works and confirms that no additional steps are needed to create a new volume from a replica

NEW QUESTION # 34

Which TWO statements about the Oracle Cloud Infrastructure (OCI) File Storage Service are accurate?

- A. File systems use Oracle-managed keys by default.
- B. Customers can encrypt the communication to a mount target via export options.
- C. Communication with file systems in a mount target is encrypted via HTTPS.
- D. Customers can encrypt data in their file system using their own Vault encryption key.

Answer: A,D

Explanation:

Oracle Cloud Infrastructure (OCI) File Storage Service offers robust encryption capabilities to ensure data security.

B . Customer-Managed Encryption: Customers can choose to encrypt their data using their own keys stored in the OCI Vault service. This gives customers control over their encryption keys and enhances data security.

D . Oracle-Managed Encryption: By default, all data stored in OCI File Storage is encrypted using Oracle-managed keys. This ensures that data is encrypted at rest without requiring any action from the customer.

Incorrect Statements:

A . Communication is not encrypted via HTTPS when accessing file systems; instead, encryption in transit is typically managed via NFS over TLS.

C . Encryption of communication to a mount target is handled via network configurations, not through export options.
