AB-900 Exam Practice - Certification AB-900 Test Answers

What companies need most now is the talents with comprehensive strength. How to prove your strength? It's time to get an internationally certified AB-900 certificate! Our AB-900 exam questions are definitely the leader in this industry. In many ways, our AB-900 Real Exam has their own unique advantages. The first and the most important aspect is the pass rate which is concerned by the most customers, we have a high pass rate as 98% to 100%, which is unique in the market!

Microsoft 365 Copilot & Agent Administration Fundamentals Sample Questions (Q39-Q44):

NEW QUESTION # 39

Select the answer that correctly completes the sentence.

Answer:

Explanation:

Explanation:

provide control over how users can access cloud apps.

The correct answer is provide control over how users can access cloud apps . Microsoft Learn defines Microsoft Entra Conditional Access as the Zero Trust policy engine that uses if-then logic to make access decisions. Microsoft states that Conditional Access policies determine who can access resources, what resources they can access, and under what conditions . These policies can require actions such as multifactor authentication, compliant devices, or other controls before allowing access to applications and services like Microsoft 365. That means Conditional Access is specifically used to control how users access cloud apps .

The other options are incorrect. Conditional Access policies are not configured by using the Microsoft Defender portal ; they are managed in the Microsoft Entra admin center . They are also not applied only to on-premises resources , because Microsoft documents Conditional Access primarily for cloud identities, cloud apps, and cloud-connected resources. Finally, Conditional Access does not require a Microsoft Exchange mailbox. It can be applied broadly across many Microsoft and third-party cloud applications integrated with Microsoft Entra.

NEW QUESTION # 40

For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Statements	Yes	No
Administrators can block specific websites from being used by Microsoft 365 Copilot.	☐	☐
Administrators can block Microsoft 365 Copilot from using web search when responding to user prompts.	☐	☐
Administrators can block access to the Researcher agent in Microsoft 365 Copilot, while allowing access to the Analyst agent.	☐	☐

Answer:

Explanation:

Statements	Yes	No
Administrators can block specific websites from being used by Microsoft 365 Copilot.	☐	☒
Administrators can block Microsoft 365 Copilot from using web search when responding to user prompts.	☒	☐
Administrators can block access to the Researcher agent in Microsoft 365 Copilot, while allowing access to the Analyst agent.	☒	☐

Explanation:

Statements	Yes	No
Administrators can block specific websites from being used by Microsoft 365 Copilot.	☐	☒
Administrators can block Microsoft 365 Copilot from using web search when responding to user prompts.	☒	☐
Administrators can block access to the Researcher agent in Microsoft 365 Copilot, while allowing access to the Analyst agent.	☒	☐

The correct selections are No, Yes, Yes . Statement 1 is No because Microsoft documents tenant controls for web search on or off , but not a general Microsoft 365 Copilot setting to block only selected websites for normal Copilot responses. Microsoft also says it doesn't recommend or support managing Copilot through selective URL or domain blocking at the network level. Website allow/block lists shown in Microsoft documentation apply to Researcher with Computer Use virtual-device settings, not to standard Microsoft

365 Copilot web grounding overall.

Statement 2 is Yes because Microsoft provides the Allow web search in Copilot policy in Cloud Policy service and in the Microsoft

365 admin center, which can disable web search for Microsoft 365 Copilot and Copilot Chat.

Statement 3 is Yes because Microsoft states that admins can block Researcher and Analyst , and agent governance includes a Block action. Microsoft also notes that for Researcher and Analyst, user scoping isn't edited through the usual panel; availability is managed by blocking the selected agent at the tenant level.

NEW QUESTION # 41

Your organization has a Microsoft 365 subscription.

You need to investigate security incidents and alerts raised from the Windows 11 devices in your organization. What should you use?

- A. Microsoft Defender for Endpoint
- B. Microsoft Defender for Identity
- C. Microsoft Purview Insider Risk Management
- D. Microsoft Entra ID Protection

Answer: A

Explanation:

The correct answer is C. Microsoft Defender for Endpoint . Microsoft documents that Defender for Endpoint is the Microsoft security solution for endpoint devices , including Windows 11 , and that it lets security teams investigate incidents, alerts, affected devices, files, processes, and remediation actions in the Microsoft Defender portal. Microsoft's investigation guidance specifically describes using Defender for Endpoint to review alerts and investigate affected devices from the devices list, alerts queue, and incident views.

The other options do not match this requirement. Microsoft Entra ID Protection is for risky users and risky sign-ins, not device incident investigation. Microsoft Purview Insider Risk Management focuses on risky user behavior such as data theft or exfiltration, not endpoint security alerts from Windows devices. Microsoft Defender for Identity monitors on-premises and hybrid identity signals from Active Directory environments, not Windows 11 endpoint incidents. For security incidents and alerts raised from organization-managed Windows 11 devices, Microsoft's documented solution is Microsoft Defender for Endpoint .

NEW QUESTION # 42

Select the answer that correctly completes the sentence.

Answer Area

_____ is a unified enterprise suite that coordinates detection, prevention, investigation, applications to provide integrated protection against sophisticated attacks.

Microsoft Defender XDR
Microsoft Entra Conditional Access
Microsoft Entra ID Protection
Microsoft Purview

Answer:

Explanation:

Answer Area

_____ is a unified enterprise suite that coordinates detection, prevention, investigation, applications to provide integrated protection against sophisticated attacks.

Microsoft Defender XDR
Microsoft Entra Conditional Access
Microsoft Entra ID Protection
Microsoft Purview

Explanation:

The correct answer is Microsoft Defender XDR . Microsoft Learn defines Microsoft Defender XDR as a unified pre- and post-breach enterprise defense suite that natively coordinates detection, prevention, investigation, and response across endpoints, identities, email, and applications to provide integrated protection against sophisticated attacks. That wording matches the sentence in the question almost exactly, which makes this the clearly correct choice.

The other options do not fit that definition. Microsoft Entra Conditional Access is Microsoft's Zero Trust policy engine used to evaluate signals and enforce access policies, not a cross-domain threat detection and response suite. Microsoft Entra ID Protection focuses on detecting and responding to identity risks such as risky sign-ins and risky users. Microsoft Purview is Microsoft's portfolio for data governance, data security, and compliance. None of those products is described by Microsoft as coordinating detection, prevention, investigation, and response across endpoints, identities, email, and applications in the same integrated XDR manner. Therefore, the only answer that correctly completes the sentence is Microsoft Defender XDR .

NEW QUESTION # 43

You need to identify files and emails that contain social security numbers (SSNs) and credit card numbers. What should you use in the Microsoft Purview portal?

- A. Activity explorer
- B. Information Protection policies
- **C. Data explorer**
- D. Information Protection reports

Answer: C

Explanation:

The correct answer is B. Data explorer. Microsoft Learn states that Data explorer in Microsoft Purview shows a current snapshot of items that have been classified as a sensitive information type in your organization.

Microsoft's sensitive information type documentation specifically lists examples such as social security numbers and credit card numbers, which means Data explorer is the appropriate portal feature for identifying files and emails that contain those data types.

Data explorer is designed to help administrators see where sensitive data exists across supported Microsoft 365 locations.

The other options are less appropriate for this task. Information Protection reports focus more broadly on label and protection reporting. Information Protection policies are for configuring classification and protection behavior, not for finding existing files and emails containing SSNs or credit card numbers. Activity explorer is primarily used to review user and policy-related activities, such as label changes or DLP events, rather than to provide the direct sensitive-data inventory view requested here. Since the question asks to identify the files and emails containing specific sensitive information types, Microsoft's documented answer is Data explorer.

NEW QUESTION # 44

.....

Our experts have experience of the exam for over ten years. So our AB-900 practice materials are their masterpiece full of professional knowledge and sophistication to cope with the AB-900 exam. They have sublime devotion to their career just like you, and make progress ceaselessly. By keeping close eyes on the current changes in this field, they make new updates of AB-900 Study Guide constantly and when there is any new, we will keep you noticed to offer help more carefully.
