100% Pass-Rate Mule-Dev-301 Actual Tests - Win Your Salesforce Certificate with Top Score

Those who want to prepare for the IT certification exam are helpless. But they have to do it. So they have restless state of mind. However, With Prep4sureExam Salesforce Mule-Dev-301 Exam Training materials, the kind of mentality will disappear. With Prep4sureExam's Salesforce Mule-Dev-301 exam training materials, you can be brimming with confidence, and do not need to worry the exam. Of course, you can also face the exam with ease. This is not only psychological help, but more importantly, it allows you to pass the exam and to help you get a better tomorrow.

Salesforce Certified MuleSoft Developer II Sample Questions (Q30-Q35):

NEW QUESTION # 30

Refer to the exhibits.

Bioinfo System API is implemented and published to Anypoint Exchange. A developer wants to invoke this API using its REST Connector.

What should be added to the POM?

- A. ☐
- **B.** ☒
- C. ☐
- D. ☐
- E. ☐

Answer: B

Explanation:

To invoke Bioinfo System API using its REST Connector, option E should be added to the pom.xml file. This option adds a dependency for Bioinfo System API REST Connector with its group ID, artifact ID, version, classifier, and type. The classifier specifies that it is a REST Connector (raml-client), and the type specifies that it is a Mule plugin (mule-plugin). Reference: <https://docs.mulesoft.com/apikit/4.x/apikit-4-generate-from-rest-api-task#add-the-api-dependency-to-the-pom-file>

NEW QUESTION # 31

A Mule application uses API autodiscovery to access and enforce policies for a RESTful implementation.

- A. The name of the flow that has HTTP listener to receive all incoming RESTful operation requests
- B. Nothing because flowRef is an optional attribute which can be passed runtime
- C. The name of the flow that has APIKit Console to receive all incoming RESTful operation requests.
- D. Any of the APIKit generate implement flows

Answer: A

Explanation:

To use API autodiscovery to access and enforce policies for a RESTful implementation, flowRef must be set to the name of the flow that has HTTP listener to receive all incoming RESTful operation requests. This way, API autodiscovery can identify the API implementation and associate it with the corresponding API specification and policies in API Manager. The flow that has HTTP listener is usually the main flow that contains the APIKit Router. Reference: <https://docs.mulesoft.com/api-manager/2.x/api-auto-discovery-new-concept#flowref>

NEW QUESTION # 32

Refer to the exhibit.

What is the result of the Mule Maven Plugin configuration of the value of property its,keystorePassword in CloudHub 2.0?

- A. Anypoint Studio secures the value
- B. Runtime Manager masks the value
- C. CloudHub encrypts the value
- D. The Mule server encrypts the value

Answer: B

Explanation:

The result of the Mule Maven Plugin configuration of the value of property its,keystorePassword in CloudHub 2.0 is that Runtime Manager masks the value. This means that Runtime Manager hides or obscures the value from anyone who views it in Runtime Manager or Anypoint Platform. Reference: <https://docs.mulesoft.com/runtime-manager/runtime-manager-agent-for-mule4#properties-tab>

NEW QUESTION # 33

An organization uses CloudHub to deploy all of its applications.

How can a common-global-handler flow be configured so that it can be reused across all of the organization's deployed applications?

- A. Create a common-global-error-handler flow in all Mule Applications Refer to it flow-ref wherever needed.
 - B. Create a Mule Plugin project
 - C. Create a Mule plugin project
- Create a common-global-error-handler flow inside the plugin project.
Use this plugin as a dependency in all Mute applications.
Import that configuration file in Mute applications.

Answer: B

Explanation:

Create a common-global-error-handler flow inside the plugin project.

Use this plugin as a dependency in all Mule applications

D.

Create a Mule daman project.

Create a common-global-error-handler flow inside the domain project.

Use this domain project as a dependency.

Explanation:

To configure a common-global-handler flow that can be reused across all of the organization's deployed applications, the developer should create a Mule Plugin project, create a common-global-error-handler flow inside the plugin project, and use this plugin as a dependency in all Mule applications. This way, the developer can import the common-global-error-handler flow in any application that needs it and avoid duplicating the error handling logic. Reference: <https://docs.mulesoft.com/mule-runtime/4.3/error-handling#global-error-handler>

NEW QUESTION # 34

An API has been developed and deployed to CloudHub Among the policies applied to this API is an allowlist of IP addresses. A developer wants to run a test in Anypoint Studio and does not want any policies applied because their workstation is not included in the allowlist.

What must the developer do in order to run this test locally without the policies applied?

- A. Create a properties file specifically for local development and set the API instance ID to a value that is not used in API Manager
- B. Deactivate the API in API Manager so the Autodiscovery element will not find the application when it runs in Studio
- C. Run the test as-s, with no changes because the Studio runtime will not attempt to connect to API Manager
- **D. Pass in the runtime parameter "-Danpow.platform.gatekeeper=disabled"**

Answer: D

Explanation:

To run a test locally without the policies applied, the developer should create a properties file specifically for local development and set the API instance ID to a value that is not used in API Manager. This way, the developer can use different configuration properties for different environments and avoid triggering API autodiscovery when running tests locally. API autodiscovery is a mechanism that associates an API implementation with its corresponding API specification and policies in API Manager based on its API instance ID. By setting this ID to a value that does not exist in API Manager, the developer can prevent API autodiscovery from finding and applying any policies to the local test. Reference: <https://docs.mulesoft.com/api-manager/2.x/api-auto-discovery-new-concept#configuring-api-autodiscovery> <https://docs.mulesoft.com/mule-runtime/4.3/configuring-properties>

NEW QUESTION # 35

.....

As you can see from the demos that on our website that our Mule-Dev-301 practice engine have been carefully written, each topic is the essence of the content. Only should you spend about 20 - 30 hours to study Mule-Dev-301 preparation materials carefully can you take the exam. The rest of time you can go to solve all kinds of things in life, ensuring that you don't delay both study and work. Our Mule-Dev-301 Exam Braindumps will save your time, money and efforts to success.

Practice Mule-Dev-301 Exams Free: <https://www.prep4sureexam.com/Mule-Dev-301-dumps-torrent.html>

100% success is the guarantee of Mule-Dev-301 valid study guide study material, Our Mule-Dev-301 exam materials have always been considered for the users, Practicing for the Mule-Dev-301 practice test, again and again, can be nerve-wracking, so in this situation Exams, You can save too much precious time because Mule-Dev-301 actual dumps help you to prepare for the Mule-Dev-301 certification tests in a very short time, Briefly speaking, our Mule-Dev-301 training guide gives priority to the quality and service and will bring the clients the brand new experiences and comfortable feelings to pass the Mule-Dev-301 exam.

Using Web style, you'll find yourself inadvertently selecting Mule-Dev-301 files or folders that happen to be near the ones you really want to move, For the most part, the radios work silently in the background, but learning how to control Mule-Dev-301 Reliable Exam Voucher them can save you battery life for important things like playing Angry Birds) This chapter is from the book □.
