

New AIP-210 Exam Camp, New AIP-210 Braindumps Files

BTW, DOWNLOAD part of Real4test AIP-210 dumps from Cloud Storage: <https://drive.google.com/open?id=1ZROl1BE4YGQSkdrLwzLiqcopiSgXnvpl>

Our AIP-210 guide questions have helped many people obtain an international certificate. In this industry, our products are in a leading position in all aspects. If you really want to get an international certificate, our AIP-210 training quiz is really your best choice. Of course, you really must get international certification if you want to stand out in the job market and get better jobs and higher salaries. With the help of our AIP-210 Exam Materials, you can reach your dream.

CertNexus AIP-210 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Identify potential ethical concerns• Analyze machine learning system use cases
Topic 2	<ul style="list-style-type: none">• Recognize relative impact of data quality and size to algorithms• Engineering Features for Machine Learning
Topic 3	<ul style="list-style-type: none">• Design machine and deep learning models• Explain data collection• transformation process in ML workflow
Topic 4	<ul style="list-style-type: none">• Address business risks, ethical concerns, and related concepts in training and tuning• Work with textual, numerical, audio, or video data formats
Topic 5	<ul style="list-style-type: none">• Train, validate, and test data subsets• Training and Tuning ML Systems and Models

- Transform numerical and categorical data
- Address business risks, ethical concerns, and related concepts in operationalizing the model

New AIP-210 Braindumps Files & AIP-210 Relevant Exam Dumps

If moving up in the fast-paced technological world is your objective, CertNexus is here to help. The excellent CertNexus Certified Artificial Intelligence Practitioner (CAIP) (AIP-210) practice exam from CertNexus can help you realize your goal of passing the CertNexus Treasury with CertNexus Certified Artificial Intelligence Practitioner (CAIP) (AIP-210) certification exam on your very first attempt. Most people find it difficult to find excellent CertNexus Treasury with CertNexus Certified Artificial Intelligence Practitioner (CAIP) (AIP-210) exam dumps that can help them prepare for the actual CertNexus Certified Artificial Intelligence Practitioner (CAIP) (AIP-210) exam.

CertNexus Certified Artificial Intelligence Practitioner (CAIP) Sample Questions (Q44-Q49):

NEW QUESTION # 44

Why do data skews happen in the ML pipeline?

- A. There Is a mismatch between live input data and offline data.
- B. There is insufficient training data for evaluation.
- C. Test and evaluation data are designed incorrectly.
- D. There is a mismatch between live output data and offline data.

Answer: A

Explanation:

Explanation

Data skews happen in the ML pipeline when the distribution or characteristics of the live input data differ from those of the offline data used for training and testing the model. This can lead to a degradation of the model performance and accuracy, as the model is not able to generalize well to new data. Data skews can be caused by various factors, such as changes in user behavior, data collection methods, data quality issues, or external events. References: What is training-serving skew in Machine Learning?, Data preprocessing for ML: options and recommendations

NEW QUESTION # 45

R-squared is a statistical measure that:

- A. Combines precision and recall of a classifier into a single metric by taking their harmonic mean.
- B. Represents the extent to which two random variables vary together.
- C. Expresses the extent to which two variables are linearly related.
- D. Is the proportion of the variance for a dependent variable that's explained by independent variables.

Answer: D

Explanation:

R-squared is a statistical measure that indicates how well a regression model fits the data. R-squared is calculated by dividing the explained variance by the total variance. The explained variance is the amount of variation in the dependent variable that can be attributed to the independent variables. The total variance is the amount of variation in the dependent variable that can be observed in the data. R-squared ranges from 0 to 1, where 0 means no fit and 1 means perfect fit.

NEW QUESTION # 46

We are using the k-nearest neighbors algorithm to classify the new data points. The features are on different scales. Which method can help us to solve this problem?

- A. Standardization
- **B. Normalization**
- C. Log transformation
- D. Square-root transformation

Answer: B

Explanation:

Normalization is a method that can help us to solve the problem of features being on different scales when using the k-nearest neighbors algorithm. Normalization is a technique that rescales the values of features to a common range, such as [0, 1] or [-1, 1]. Normalization can help reduce the influence or dominance of some features over others, as well as improve the accuracy and performance of the algorithm².

NEW QUESTION # 47

Which of the following is a privacy-focused law that an AI practitioner should adhere to while designing and adapting an AI system that utilizes personal data?

- A. ISO/IEC 27001
- **B. General Data Protection Regulation (GDPR)**
- C. PCIDSS
- D. Sarbanes Oxley (SOX)

Answer: B

Explanation:

The General Data Protection Regulation (GDPR) is a privacy-focused law that an AI practitioner should adhere to while designing and adapting an AI system that utilizes personal data. The GDPR applies to any organization that processes personal data of individuals in the European Union (EU), regardless of where the organization is located. The GDPR grants individuals rights over their personal data, such as the right to access, rectify, erase, restrict, or object to its processing. The GDPR also imposes obligations on organizations that process personal data, such as the duty to obtain consent, conduct data protection impact assessments, implement data protection by design and by default, and ensure accountability and transparency. The GDPR also addresses some specific issues related to AI, such as automated decision-making, profiling, and data portability.

NEW QUESTION # 48

Which two of the following criteria are essential for machine learning models to achieve before deployment? (Select two.)

- A. Portability
- **B. Explainability**
- **C. Scalability**
- D. Data size
- E. Complexity

Answer: B,C

Explanation:

Explanation

Scalability and explainability are two criteria that are essential for ML models to achieve before deployment.

Scalability is the ability of an ML model to handle increasing amounts of data or requests without compromising its performance or quality. Scalability can help ensure that the model can meet the demand and expectations of users or customers, as well as adapt to changing conditions or environments. Explainability is the ability of an ML model to provide clear and intuitive explanations for its predictions or decisions.

Explainability can help increase trust and confidence among users or stakeholders, as well as enable accountability and responsibility for the model's actions and outcomes.

NEW QUESTION # 49
