

Updated and Error-free VCE4Plus Salesforce Analytics-Admn-201 Exam Questions

Salesforce Admin 201 Exam Practice Questions With Complete Solutions (Latest Updated 2024/2025) Graded 100%

1. What should a system administrator use to disable access to a custom application for a group of users?
- A. Profiles
 - B. Sharing rules
 - C. Web tabs
 - D. Page layouts - ✓✓A. Profiles
2. Universal Containers needs to track the manufacturer and model for specific car companies. How can the system administrator ensure that the manufacturer selected influences the values available for the model?
- A. Create the manufacturer field as a dependent picklist and the model as a controlling picklist.
 - B. Create a lookup field from the manufacturer object to the model object.
 - C. Create the manufacturer field as a controlling picklist and the model as a dependent picklist.
 - D. Create a multi-select picklist field that includes both manufacturers and models. - ✓✓C. Create the manufacturer field as a controlling picklist and the model as a dependent picklist.
3. Sales representatives at Universal Containers need assistance from product managers when selling certain products. Product managers do not have access to opportunities, but need to gain access when they are assisting with a specific deal. How can a system administrator accomplish this?
- A. Notify the product manager using opportunity update reminders.
 - B. Enable opportunity teams and allow users to add the product manager.
 - C. Use similar opportunities to show opportunities related to the product manager.
 - D. Enable account teams and allow users to add the product manager. - ✓✓B. Enable opportunity teams and allow users to add the product manager.

<https://drive.google.com/open?id=1wqJb0Q6vvOC0NNfiOFiRtmwSsh94aJi4>

No matter how good the product is users will encounter some difficult problems in the process of use. Our Analytics-Admn-201 real exam materials are not exceptional also, in order to enjoy the best product experience, as long as the user is in use process found any problem, can timely feedback to us, for the first time you check our Analytics-Admn-201 Exam Question performance, professional maintenance staff to help users solve problems. Our Analytics-Admn-201 learning reference files have a high efficient product maintenance team, and they can send the Analytics-Admn-201 exam questions to you in a few minutes.

Salesforce Analytics-Admn-201 Exam Syllabus Topics:

Topic	Details

Topic 1	<ul style="list-style-type: none"> • Administration: This section of the exam measures the skills of Tableau Administrators and covers the day-to-day tasks of maintaining Tableau Server. Candidates should understand how to create and manage schedules, subscriptions, backups, and restores, as well as how to use tools such as TSM, Tabcmd, and REST API. It emphasizes monitoring, server analysis, log file usage, and embedding practices. It also includes managing projects, sites, and nested structures, while contrasting end-user and administrator abilities. Knowledge of publishing, web authoring, sharing views, caching, and data source certification is also tested.
Topic 2	<ul style="list-style-type: none"> • Connecting to and Preparing Data: This section of the exam measures the skills of Tableau Administrators and covers the basic understanding of Tableau Server's interface, navigation, and overall topology. Candidates are expected to recognize both client and server components, understand how these interact, and know where to find information about versions, releases, and updates. It also focuses on system requirements, including hardware, operating systems, browsers, email configurations, cloud considerations, and licensing models. Additionally, it examines knowledge of server processes, data source types, network infrastructure, and ports needed for a stable deployment.
Topic 3	<ul style="list-style-type: none"> • Migration & Upgrade: This section of the exam measures the skills of System Engineers and covers the process of upgrading and migrating Tableau Server environments. Candidates should understand how to carry out clean reinstalls, migrate servers to new hardware, and maintain backward compatibility during the process.
Topic 4	<ul style="list-style-type: none"> • Troubleshooting: This section of the exam measures the skills of Support Specialists and covers resolving common Tableau Server issues. Candidates must know how to reset accounts, package logs, validate site resources, rebuild search indexes, and use analysis reports. It also includes understanding the role of browser cookies and creating support requests when needed.
Topic 5	<ul style="list-style-type: none"> • Installation and Configuration: This section of the exam measures the skills of Server Engineers and covers the process of installing Tableau Server, understanding installation paths, identity store options, SSO integrations, SSL setup, and silent installs. Candidates also need to demonstrate the ability to configure Tableau Server by setting cache, distributing processes, customizing sites, and configuring user quotas. It further includes adding users, managing their roles and permissions, and applying Tableau's security model at different levels from sites to workbooks.

Latest Analytics-Admn-201 Test Practice & Analytics-Admn-201 Test Testking

Our exam prep material is famous among Analytics-Admn-201 exam candidates which help to polish the knowledge required to pass the Salesforce Analytics-Admn-201 exam. The certification is organized by Analytics-Admn-201 internationally. Our Salesforce Analytics-Admn-201 exam questions are the most cost-effective as we understand that you need low-cost material but are authentic and updated. VCE4Plus provides its Salesforce Analytics-Admn-201 Exam Questions in three forms, one is PDF eBook, the second is practice exam software for Windows-based systems, and the third is an online practice test.

Salesforce Certified Tableau Server Administrator Sample Questions (Q44-Q49):

NEW QUESTION # 44

Which three data sources support Kerberos delegation with Tableau Server? (Choose three.)

- A. SQL Server
- B. PostgreSQL
- C. SAP HANA
- D. Teradata

Answer: A,C,D

Explanation:

Kerberos delegation allows Tableau Server to pass a user's Kerberos credentials to a data source for seamless authentication (SSO)-let's explore which sources support it:

- * Kerberos Overview:

- * Used with Active Directory (AD) for SSO in Windows environments.

- * Tableau Server delegates the user's ticket to the data source, avoiding embedded credentials.

- * Requires:

- * Data source support for Kerberos.

- * Proper configuration (e.g., SPN, constrained delegation).

- * Supported Data Sources: Per Tableau's documentation:

- * Option A (Teradata): Correct.

- * Details: Supports Kerberos delegation-common in enterprise data warehouses.

- * Config: Enable in TSM (tsm authentication kerberos configure) and set SPN for Teradata.

- * Option C (SQL Server): Correct.

- * Details: Fully supports Kerberos-widely used with AD-integrated SQL Server instances.

- * Config: Requires AD setup and "Trustworthy" delegation in SQL Server.

- * Option D (SAP HANA): Correct.

- * Details: Supports Kerberos SSO via delegation-popular in SAP ecosystems.

- * Config: Needs HANA Kerberos setup (e.g., keytab) and Tableau Server integration.

- * Option B (PostgreSQL): Incorrect.

- * Why: Supports Kerberos authentication natively, but Tableau Server doesn't enable delegation to PostgreSQL-users must embed credentials or use other methods (e.g., OAuth).

Why This Matters: Kerberos delegation enhances security by avoiding stored passwords-knowing supported sources ensures SSO feasibility.

Reference: Tableau Server Documentation - "Kerberos Delegation" (https://help.tableau.com/current/server/en-us/kerberos_delegation.htm), "Supported Connectors" (<https://help.tableau.com/current/server/en-us/datasource.htm>).

NEW QUESTION # 45

You attempt to delete a user who owns content on a Tableau Server. What is the result of the delete action?

- A. The user is deleted, and the user's content is reassigned to the project leader
- B. The user is deleted, and the user's content is reassigned to the server administrator
- C. The user and all of the user's content is deleted
- **D. The user is switched to an Unlicensed site role and is NOT deleted**

Answer: D

Explanation:

Deleting a user in Tableau Server involves handling their owned content (workbooks, data sources)-let's analyze the process:

- * Deletion Rules:

- * Ownership Check: Tableau prevents deletion if the user owns content to avoid orphaning it.

- * Action: Instead of deleting, the user's site role is set to Unlicensed, retaining their account and content ownership.

- * Resolution: An admin must reassign ownership (e.g., via Users > Actions > Change Owner) before deletion.

- * Option D (User switched to Unlicensed and NOT deleted): Correct.

- * Details: Attempting deletion (e.g., Users > Select User > Actions > Delete) triggers a check. If content exists, the user becomes Unlicensed-still in the system but unable to log in.

- * Why: Protects data integrity-content remains accessible for reassignment.

- * Option A (Deleted, content to server admin): Incorrect.

- * Why: No automatic reassignment to the server admin-manual action is required first.

- * Option B (Deleted, content to project leader): Incorrect.

- * Why: Project leaders don't automatically inherit content-no such mechanism exists.

- * Option C (User and content deleted): Incorrect.

- * Why: Tableau avoids deleting content with the user-too destructive without explicit intent.

Why This Matters: This safeguard prevents accidental data loss, ensuring admins manage ownership transitions deliberately.

Reference: Tableau Server Documentation - "Delete Users" (https://help.tableau.com/current/server/en-us/users_delete.htm).

NEW QUESTION # 46

When you use trusted tickets in Tableau Server, users can:

- **A. Access embedded views without being prompted for credentials**
- B. Encrypt database connections
- C. Embed database credentials
- D. Save and edit workbooks

Answer: A

Explanation:

Trusted Tickets is an authentication method in Tableau Server for embedding views in external applications (e.g., portals) without requiring users to log in manually. Here's how it works:

* A trusted application (e.g., a web server) authenticates with Tableau Server using a trusted IP or username/password.

* Tableau Server issues a temporary ticket (a unique string).

* The ticket is embedded in a view URL (e.g., /trusted/<ticket>/views/...), granting access to the view for a short period (configurable, default 5 minutes).

* Option A (Access embedded views without being prompted for credentials): Correct. Trusted tickets enable SSO-like behavior for embedded content, bypassing the login prompt if the ticket is valid. This is ideal for seamless integration into external systems.

* Option B (Encrypt database connections): Incorrect. Encryption is handled by data source configurations (e.g., SSL), not trusted tickets, which focus on user authentication.

* Option C (Save and edit workbooks): Incorrect. Trusted tickets grant view access, not edit permissions-those depend on the user's site role and permissions.

* Option D (Embed database credentials): Incorrect. Trusted tickets authenticate users to Tableau Server, not databases-database credentials are managed separately in the data source.

Why This Matters: Trusted tickets simplify embedding Tableau content securely in custom applications, enhancing user experience.

Reference: Tableau Server Documentation - "Trusted Authentication" (https://help.tableau.com/current/server/en-us/trusted_auth.htm).

NEW QUESTION # 47

What should you do to ensure that server tasks associated with a particular schedule run one-at-a-time?

- **A. Set Execution to Serial**
- B. Set Execution to Parallel
- C. Set Default priority to 0
- D. Set Frequency to Hourly

Answer: A

Explanation:

In Tableau Server, schedules manage tasks such as extract refreshes and subscriptions. The execution mode of a schedule determines how tasks within that schedule are processed by the Background process:

* Parallel: Tasks run simultaneously (up to the Background process's capacity), which is the default setting.

* Serial: Tasks run one-at-a-time in sequence, ensuring that one task completes before the next begins.

To ensure tasks associated with a particular schedule run one-at-a-time, you must configure the schedule's execution mode to Serial. This is done in the Tableau Server web interface:

* Go to Schedules.

* Select the schedule, click Actions > Edit Schedule.

* Under Execution, choose Serial instead of Parallel.

* Option A (Set Execution to Serial): Correct. This directly addresses the requirement by forcing tasks to execute sequentially.

* Option B (Set Default priority to 0): Incorrect. Priority (1-100) determines the order of task execution across all schedules, not whether tasks run one-at-a-time within a single schedule. Also, 0 is not a valid priority value (minimum is 1).

* Option C (Set Frequency to Hourly): Incorrect. Frequency (e.g., hourly, daily) controls when the schedule runs, not how tasks within it are executed.

* Option D (Set Execution to Parallel): Incorrect. Parallel execution allows tasks to run simultaneously, which contradicts the requirement.

Reference: Tableau Server Documentation - "Create or Modify a Schedule" (https://help.tableau.com/current/server/en-us/schedule_manage_create.htm).

NEW QUESTION # 48

What event is most likely to cause problems for a Tableau Server?

- **A. Running additional software on the server**
- B. Separating the Backgrounder and VizQL processes to different machines
- C. Configuring the server to use a static IP address
- D. Using a non-default installation path

Answer: A

Explanation:

Tableau Server's performance and stability depend on dedicated resources and proper configuration. Running additional software on the same server is the most likely to cause problems because:

- * Resource contention: Tableau Server requires significant CPU, RAM, and disk I/O. Other software (e.g., databases, web servers) can compete for these resources, leading to slowdowns, crashes, or failed tasks.
- * Port conflicts: Tableau uses specific ports (e.g., 80, 443, 8850), and other applications might interfere.
- * Security risks: Additional software increases the attack surface, potentially compromising Tableau Server.

Tableau recommends running the server on dedicated hardware without unrelated applications.

* Option A (Running additional software on the server): Correct. This is a common cause of performance issues and is explicitly discouraged in Tableau's best practices.

* Option B (Separating the Backgrounder and VizQL processes to different machines): Incorrect.

This is a supported multi-node configuration that can improve performance, not cause problems, if properly set up via TSM.

* Option C (Configuring the server to use a static IP address): Incorrect. A static IP is recommended for Tableau Server to ensure consistent network access, so it's unlikely to cause issues.

* Option D (Using a non-default installation path): Incorrect. While not default, a custom path is supported (via TSM or installer options) and unlikely to cause problems if permissions and disk space are adequate.

Reference: Tableau Server Documentation - "Best Practices for Installation" (https://help.tableau.com/current/server/en-us/install_best_practices.htm).

NEW QUESTION # 49

.....

The VCE4Plus is a leading platform that is committed to offering to make the Salesforce Exam Questions preparation simple, smart, and successful. To achieve this objective VCE4Plus has got the services of experienced and qualified Salesforce Certified Tableau Server Administrator (Analytics-Admn-201) exam trainers. They work together and put all their efforts and ensure the top standard of VCE4Plus Salesforce Certified Tableau Server Administrator (Analytics-Admn-201) exam dumps all the time.
