Juniper Mist AI Wired, Specialist (JNCIS-MistAI-Wired) Sample Questions (Q30-Q35):

NEW QUESTION # 30

You want to receive e-mail notifications when there are issues with your switches. Where would you configure this capability in the Mist dashboard?

- **A. Alerts Configuration**
- B. Marvis conversational interface
- C. Wired SLEs
- D. Marvis Actions

Answer: A

Explanation:

The Alerts Configuration section in the Mist dashboard allows administrators to define notification rules and recipients for various network events, including switch issues, site-level incidents, and SLE threshold violations. Notifications can be sent via email, webhook, or third-party integrations.

"Use the Alerts Configuration page to enable alerts for specific device events, assign severity levels, and define e-mail or webhook recipients for switch and site notifications." Option A (Marvis conversational interface): Used for querying issues via AI, not for email alerts.

Option B (Wired SLEs): Provides analytics and thresholds but does not manage notifications.

Option D (Marvis Actions): Offers suggested remediation steps, not alert setup.

Option C (Alerts Configuration): Correct- this is where email notifications are configured.

NEW QUESTION # 31

What information would be streamed through webhooks? (Choose two.)

- **A. alerts**
- B. audit logs
- **C. SLE metrics of clients**
- D. location coordinates of RFID tags

Answer: A,C

Explanation:

Mist webhooks provide real-time integration with external systems by streaming alerts and SLE (client) metrics.

They allow automation tools to react immediately to network health or performance changes.

NEW QUESTION # 32

Ethernet Segment Identifiers (ESI) in EVPN are crucial for:

- A. Complicating route distribution policies
- B. Identifying individual subscriber identities
- **C. Facilitating load balancing and redundancy on multi-homed links**
- D. Reducing the effectiveness of network segmentation

Answer: C

NEW QUESTION # 33

What role does dynamic port configuration play in service level expectations (SLE)?

- **A. It ensures devices meet network performance standards automatically**
- B. It decreases the overall network performance
- C. It increases the need for manual configurations

- D. It has no impact on SLE

Answer: A

NEW QUESTION # 34

What are three wired Service Level Expectations (SLEs) that comprise Juniper Mist Wired Assurance? (Choose three.)

- A. Throughput
- B. Coverage
- C. Capacity
- D. Switch Health
- E. Successful Connects

Answer: A,D,E

Explanation:

Wired Assurance defines SLEs (Service Level Expectations) to provide measurable performance indicators for wired networks. These metrics identify root causes of network degradation by monitoring switch health, connection success, and throughput performance.

"Juniper Mist Wired Assurance delivers AI-driven insights across key wired SLEs including Successful Connects, Throughput, and Switch Health, giving visibility into user experience and switch performance." Option A (Capacity): Incorrect - capacity is used in wireless SLEs, not wired.

Option B (Successful Connects): Correct - tracks connection success rate and anomalies.

Option C (Switch Health): Correct - monitors hardware, software, and PoE status.

Option D (Coverage): Incorrect - pertains to wireless SLEs.

Option E (Throughput): Correct - measures data transfer rate, latency, jitter, and loss.
