

H12-891_V1.0:HCIE-Datacom V1.0 collect & ExamCollection H12-891_V1.0 bootcamp

P.S. Free 2026 Huawei H12-891_V1.0 dumps are available on Google Drive shared by Actualtests4sure:
<https://drive.google.com/open?id=1wAAi6aGZwmSETlvuE3NVrY7BNmQroLL9>

As we all know, good H12-891_V1.0 study materials can stand the test of time, our company has existed in the H12-891_V1.0 exam dumps for years, we have the most extraordinary specialists who are committed to the study of the H12-891_V1.0 study materials for years, they conclude the questions and answers for the candidates to practice. By practicing the H12-891_V1.0 Exam Dumps, the candidates can pass the exam successfully. Choose us, and you can make it.

Huawei H12-891_V1.0 (HCIE-Datacom V1.0) Certification Exam is an advanced level certification program that validates the knowledge and skills of professionals in the field of data communication. HCIE-Datacom V1.0 certification is designed to test the expertise of candidates in designing, implementing, and troubleshooting complex data communication networks. The HCIE-Datacom V1.0 certification is highly regarded in the industry and is recognized globally, making it a valuable asset for professionals looking to advance their career in the field of data communication.

Free PDF 2026 Huawei Accurate Study H12-891_V1.0 Demo

Actualtests4sure is a website provide you with the best and valid H12-891_V1.0 exam questions that elaborately compiled and highly efficiently, studying with our H12-891_V1.0 study guide will cost you less time and energy, because we shouldn't waste our money on some useless things. The passing rate and the hit rate of our H12-891_V1.0 Training Material are also very high, there are thousands of candidates choose to trust our website and they have passed the H12-891_V1.0 exam. We provide with candidate so many guarantees that they can purchase our H12-891_V1.0 study materials no worries.

Huawei HCIE-Datacom V1.0 Sample Questions (Q167-Q172):

NEW QUESTION # 167

According to the following information displayed on a router, which of the following are the causes of the failure in establishing an OSPF adjacency relationship?

OSPF error statistics:

- * 1: Hello timer mismatch
- * 0: Netmask mismatch
- * 0: Bad checksum
- * 0: Bad authentication type
- * 0: Unknown neighbor

* 0: Extern option mismatch

- A. Hello packets are sent at different intervals.
- B. The IP address masks of the interfaces are inconsistent.
- C. The area types are inconsistent.
- D. The area IDs are inconsistent.

Answer: A,D

Explanation:

Comprehensive and Detailed Explanation:

The OSPF error output shows: # Hello timer mismatch (1 error) # Hello intervals must match for adjacency formation (A) ## No Netmask mismatch errors # Subnet masks are consistent, so option C is incorrect ## No Extern option mismatch # No evidence of area type inconsistency (option D) ## If area IDs were mismatched, adjacency would not form (option B is correct) # Thus, the correct answers are A and B.

Reference: Huawei HCIE Datacom - OSPF Troubleshooting

NEW QUESTION # 168

BGP Link State (BGP-LS) introduces a new NLRI into BGP. The NLRI carries link, node, topology prefix, and other information, and is also referred to as the link state NLRI.

- A. TRUE
- B. FALSE

Answer: A

Explanation:

Understanding BGP Link State (BGP-LS)

#What is BGP-LS?

BGP-LS (BGP Link-State) is an extension of BGP that allows routers to exchange network topology information via Link-State NLRI. Helps SDN controllers and path computation elements (PCEs) make intelligent routing decisions.

#What Does BGP-LS Advertise?

#Node Information- Router IDs, Loopbacks

#Link Information- Bandwidth, Delay, Cost

#Prefix Information- Network Subnets

#Topology Information- Full network graph

Why is the Answer TRUE?

#BGP-LS introduces a new NLRI format for advertising link-state information.

#NLRI (Network Layer Reachability Information) is used to distribute topology data to SDN controllers.

#It improves path optimization by enabling centralized traffic engineering decisions.

Real-World Application:

SDN-Based Traffic Engineering: Used in Segment Routing (SR) networks for centralized path selection.

MPLS TE (Traffic Engineering): Optimizes network paths dynamically based on real-time link-state data.

#Reference: Huawei HCIE Datacom Guide - BGP Link-State (BGP-LS) Fundamentals

NEW QUESTION # 169

Refer to the following command output on the router R3. Which of the following statements are correct?

<R3> display interface Tunnel

Tunnel0/0/0 current state : UP

Line protocol current state : UP

Last line protocol up time : 15:21:26 UTC-08:00

Description: HUAWEI, AR Series, Tunnel0/0/0 Interface

Route Port, The Maximum Transmit Unit is 1500

Internet Address is 20.1.1.2/24

Encapsulation is TUNNEL, loopback not set

Tunnel source 10.0.3.3 (LoopBack0), destination 10.0.1.1

Tunnel protocol/transport GRE/IP, key disabled

keepalive disabled

Checksumming of packets disabled

- A. The tunnel source IP address is 10.0.1.1.
- B. The tunnel interface MTU is 1500 bytes.
- C. The tunnel interface IP address is 20.1.1.2/24.
- D. The tunnel destination IP address is 10.0.1.1.

Answer: B,C,D

Explanation:

From the output:

Tunnel destination IP address: Clearly shown as destination 10.0.1.1 ## Tunnel interface MTU: Shown as The Maximum Transmit Unit is 1500 ## Tunnel interface IP: Shown as Internet Address is 20.1.1.2/24 ## Tunnel source: Tunnel source 10.0.3.3 (LoopBack0) # Not 10.0.1.1 ## Therefore:

A- Correct

B- Correct

C- Correct

D- Incorrect (confuses destination as source)

Correct answers: A, B, C

NEW QUESTION # 170

You are now troubleshooting a LAN, and you suspect that the error is due to a mismatch in the work mode.

Which switch interface error indicates that the 10/100/1000 IEE gigabit interface operating mode does not match?

(Multiple choice questions).

- A. Excess Conflict
- B. FCS error
- C. Alignment error
- D. Super Small Frame
- E. Lag conflicts

Answer: A,B,C,D,E

NEW QUESTION # 171

Before connecting an SSH client to an SSH server in public key authentication mode, a client needs to create a key pair. Which of the following commands is used to create a DSS key pair on the client using Git Bash?

- A. ssh-keygen -t ecc
- B. ssh-keygen -t rsa
- C. ssh-keygen -t dss
- D. ssh-keygen -t dsa

Answer: D

Explanation:

SSH Public Key Authentication

In public key authentication mode, the SSH client must generate a key pair (public and private keys) before connecting to an SSH server.

C. ssh-keygen -t dsa (Correct Answer)

* DSA (Digital Signature Algorithm) key generation for SSH authentication.

* Generates a private key (id_dsa) and a public key (id_dsa.pub).

NEW QUESTION # 172

.....

Once you start to become diligent and persistent, you will be filled with enthusiasms. Nothing can defeat you as long as you are optimistic. We sincerely hope that our H12-891_V1.0 study materials can become your new purpose. Our H12-891_V1.0 study materials can teach you much practical knowledge, which is beneficial to your career development. In order to survive in the society and realize our own values, learning our H12-891_V1.0 Study Materials is the best way. Never stop improving yourself. The society warmly welcomes struggling people.
