

First-grade JN0-253 Test Torrent Covers the Entire Syllabus of JN0-253

2026 Latest Prep4King JN0-253 PDF Dumps and JN0-253 Exam Engine Free Share: <https://drive.google.com/open?id=1XdUCnjAetpTze8oGzgqAanr--nr9m9yoP>

Now is the ideal time to prepare for and crack the JN0-253 exam. To do this, you just need to enroll in the JN0-253 examination and start preparation with top-notch and updated Juniper JN0-253 actual exam dumps. All three formats of Mist AI, Associate (JNCIA-MistAI) JN0-253 Practice Test are available with up to three months of free Mist AI, Associate (JNCIA-MistAI) exam questions updates, free demos, and a satisfaction guarantee. Just pay an affordable price and get JN0-253 updated exam dumps.

Juniper JN0-253 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Location-based Services: This domain presents virtual Bluetooth Low Energy capabilities for asset tracking, visibility, and location-aware experiences that extend networking into physical space management.
Topic 2	<ul style="list-style-type: none">Marvis Virtual Network Assistant AI: This domain introduces Marvis, an AI-powered assistant providing automated troubleshooting through intelligent actions, natural language queries, and specialized analytical tools for proactive issue resolution.
Topic 3	<ul style="list-style-type: none">Juniper Mist Monitoring and Analytics: This domain focuses on monitoring tools including service-level expectations, packet captures, AI-driven insights, automated alerts, and audit logs for comprehensive network visibility.
Topic 4	<ul style="list-style-type: none">Juniper Mist Cloud Operations: This domain covers three API types (RESTful, WebSocket, Webhook) for programmatic integration, plus support resources including ticketing systems and documentation.

JN0-253 Reliable Exam Materials & Authorized JN0-253 Certification

Our company has successfully launched the new version of our JN0-253 exam tool. Perhaps you are deeply bothered by preparing the exam, perhaps you have wanted to give it up. Now, you can totally feel relaxed with the assistance of our JN0-253 Study Guide. Our JN0-253 exam dumps are definitely more reliable and excellent than other exam tool. What is more, the passing rate of our JN0-253 study materials is the highest in the market.

Juniper Mist AI, Associate (JNCIA-MistAI) Sample Questions (Q72-Q77):

NEW QUESTION # 72

Which statement is true about Radio Resource Management (RRM)?

- **A. The RRM global optimization system automatically runs once a day.**
- B. The RRM event-driven system automatically runs every hour.
- C. The RRM event-driven system automatically runs once a day.
- D. The RRM global optimization system automatically runs every hour.

Answer: A

Explanation:

Radio Resource Management (RRM) is a key feature of Juniper Mist Wireless Assurance that uses AI-driven automation to dynamically adjust radio settings across access points (APs) for optimal wireless performance. The RRM engine ensures proper channel assignment, transmit power control, and interference management across the network.

According to the Juniper Mist Wireless Assurance and AI-Driven RRM Guide, RRM operates in two modes:

* Event-Driven RRM: This mode reacts immediately to real-time changes in the RF environment, such as new access points, interference spikes, or client density changes.

* Global Optimization RRM: This process runs as scheduled, system-wide optimization once per day to evaluate the overall RF environment and redistribute channels and power settings network-wide for the best balance of coverage and capacity.

The documentation states:

"The RRM global optimization algorithm automatically executes once daily to ensure optimal channel and power planning across all APs." Thus, the correct answer is D - The RRM global optimization system automatically runs once a day.

NEW QUESTION # 73

Which two statements are true about switch configurations at the site level? (Choose two.)

- A. Organizational-level templates override site-level switch configurations.
- **B. Site-level switch configurations override org-level templates.**
- C. Switch configurations at the site level are required to manually configure individual switches.
- **D. Switch configurations at the site level are an additional way to apply a switch template to a specific site.**

Answer: B,D

Explanation:

In the Juniper Mist Cloud architecture, configuration hierarchy and inheritance are key design principles for managing EX Series and QFX Series switches under Wired Assurance. Configuration settings can be applied at both the organization level and the site level, with clearly defined precedence rules.

According to the Juniper Mist Wired Assurance Configuration Guide, the organization level defines global configuration templates that apply across multiple sites, while the site level provides customization options specific to a particular location or environment.

The documentation states:

"Site-level configuration overrides any global or organizational template configurations for switches within that site." and further clarifies:

"Administrators can create or modify switch templates at the site level to apply custom settings to specific deployments without affecting other sites under the same organization." Thus:

* Statement C is correct - site-level configurations are an additional method to apply templates for a specific site.

* Statement D is correct - site-level configurations take precedence over org-level templates.

Statement A is incorrect because org-level templates do not override site-level configurations; the reverse is true.

Statement B is incorrect because site-level configuration is not required for manual switch setup—it is an optional, more efficient method of template application.

NEW QUESTION # 74

Exhibit:

Referring to the exhibit, how many sites have unused Marvis for Wireless subscriptions?

- A. 0
- **B. 1**
- C. 2
- D. 3

Answer: B

Explanation:

In the Juniper Mist Cloud, the Subscriptions page provides administrators with detailed information about the status of service licenses and subscriptions associated with devices, sites, and organizations. This includes visibility into the number of active devices, sites, and any unused subscriptions across the organization.

According to the Juniper Mist Cloud Licensing and Subscription Management Guide, the "Sites" section under Subscriptions Summary shows:

"The total number of configured sites within the organization and the number of sites that currently do not have assigned subscriptions." In the exhibit, the summary shows:

* 82 Sites total

* 15 Unused sites

This indicates that 15 sites currently have no active or assigned Marvis for Wireless subscriptions. The

"Unused" label under Sites refers specifically to the count of sites not yet utilizing their allocated subscription entitlements.

Therefore, the correct answer is B. 15.

NEW QUESTION # 75

How does Marvis detect a bad cable problem?

- A. Marvis randomly performs cable tests on every cable in your network.
- B. Marvis randomly performs packet captures on various APs to find bad cables in your network.
- C. Marvis constantly sends ping packets to remote end hosts to determine whether there is a failure in the path.
- **D. Marvis analyzes metrics, such as interface errors, that match a bad cable pattern.**

Answer: D

Explanation:

Marvis, the AI-driven Virtual Network Assistant in Juniper Mist, uses continuous telemetry analysis and AI correlation to identify bad cable conditions. It does this by examining interface-level statistics gathered from switches and access points through Wired Assurance.

According to the Juniper Mist Marvis Operations and Troubleshooting Guide:

"Marvis detects bad cable issues by analyzing telemetry patterns such as CRC errors, FCS errors, packet drops, and link flaps that collectively match a known cable fault signature." When such patterns are detected, Marvis automatically generates an AI Action indicating a Bad Cable issue and identifies whether the problem is with the port or the cable. This proactive detection allows administrators to replace faulty hardware before it impacts network users.

Options A, B, and C are incorrect because Marvis does not perform active ping, random packet captures, or random cable testing. Its detection is entirely AI and telemetry-based.

Therefore, the correct answer is D. Marvis analyzes metrics, such as interface errors, that match a bad cable pattern.

NEW QUESTION # 76

Which Juniper Mist role has limited access for a specified grace period?

- A. Super Observer
- **B. Installer**
- C. Helpdesk
- D. Observer

Answer: B

Explanation:

The Installer role in the Juniper Mist Cloud is a temporary, limited-access account type used for onboarding network devices—typically Access Points (APs)—during initial deployment. It provides restricted visibility and configuration rights necessary for installation tasks but expires automatically after a defined grace period to maintain network security and access control.

According to the Juniper Mist Cloud Administration and User Management Guide:

"The Installer role provides temporary access to add, claim, and verify devices at a site. This access expires automatically after the predefined installation grace period." This role is ideal for field engineers or contractors performing device installations without granting them long-term administrative privileges. The grace period is typically seven days, after which the Installer account loses access to the organization automatically.

Other roles differ as follows:

- * Super Observer: Read-only access across the entire organization.
- * Observer: Read-only access limited to assigned sites.
- * Helpdesk: Focused on monitoring and basic troubleshooting tasks, not installation.

Therefore, the correct answer is B. Installer.
