Arch-303資格トレーニング & Arch-303サンプル問題集

夢を持ったら実現するために頑張ってください。「信仰は偉大な感情で、創造の力になります。」とゴーリキーは述べました。私の夢は最高のIT専門家になることです。その夢は私にとってはるか遠いです。でも、成功へのショートカットを見つけました。JpexamのSalesforceのArch-303試験トレーニング資料を利用して気楽に試験に合格しました。それはコストパフォーマンスが非常に高い資料ですから、もしあなたも私と同じIT夢を持っていたら、JpexamのSalesforceのArch-303試験トレーニング資料を利用してください。それはあなたが夢を実現することを助けられます。

Salesforce Certified B2C Commerce Architect 認定 Arch-303 試験問題 (Q65-Q70):

質問 # 65

During discovery, the customer required a feature that is not included in the standard Storefront Reference Architecture (SFRA). In order to save budget, the Architect needs to find the quickest way to implement this feature.

What is the primary resource the Architect should use to search for an existing community implementation of the requested feature?

- A. Salesforce B2C Commerce Documentation
- **B. Salesforce Commerce Cloud GitHub repository**
- C. Salesforce Commerce Cloud Trailblazer community
- D. Salesforce Trailblazer Portal

正解: B

解説:

When seeking a community implementation of a feature not included in the standard Storefront Reference Architecture (SFRA), the primary resource should be the Salesforce Commerce Cloud GitHub repository (Answer A). This repository often contains projects and code samples contributed by other developers in the community, which might include custom implementations that could be adapted to meet the customer's requirements. This approach not only leverages existing solutions that have been shared publicly but also can significantly save time and resources in development.

質問 # 66

The Client is Crowding and decided to migrate its ecommerce website to B2C Commerce. The Client provided the Architect with the metrics for its existing website over the past 12 months and forecasted into the next year:

Noting these historical metrics and the forecasted growth of 300%, which load test targets meet best practices for testing the new B2C Commerce site?

- A. 150000 visits per hour, 3000000 page views per hour, and 37500 orders per hour
- **B. 15000 visits per hour, 300000 page views per hour, and 3750 orders per hour**
- C. 3000 visits per hour, 60000 page views per hour, and 750 orders per hour
- D. 1500 visits per hour, 30000 page views per hour, and 375 orders per hour

正解: B

解説:

Considering the existing metrics and forecasted 300% growth, the appropriate load testing targets for the new B2C Commerce site would be:

* 15000 visits per hour: This figure is calculated by applying the expected growth to the peak visits per hour (10000 visits), resulting in 15000 visits. The choice of 15000 provides a higher buffer to accommodate unforeseen spikes in traffic.

* 300000 page views per hour: Similarly, this is scaled up from the peak page views per hour (20000) considering the growth, ensuring the site can handle high demand and interactions.

* 3750 orders per hour: This target is based on the peak orders per hour (250) with the growth applied, allowing testing of the system's ability to handle transactions under significant load.

These targets ensure that the system is robust enough to handle increased traffic and transactions without performance degradation, crucial for maintaining customer satisfaction and operational stability.

質問 # 67

A developer is validating the pipeline cache and noticed that the PDP page is very low cached. The one parameter is showing the position on the product listing page upon checking the site and code.

What should the developer adjust in order to improve the page cache hit ratio, keeping in mind that the client is insisting on the parameter for their analytics?

- A. Rework the implementation so it reads the parameter on client-side, passes it to the analytics and exclude it from cache parameters.
- B. Rework the implementation so the parameter is not passed in the URL and is read from the URL hash.
- **C. Add the key to the cache exclude parameters.**
- D. Rework the implementation so it doesn't depend on that parameter.

正解: C

質問 # 68

A new version of the Page Show controller is required for implementation of Page Designer specific look. It requires implementation of a specific, cache period for Page Designer pages, which is not currently available in the base Storefront Reference Architecture (SFRA) cache.js module. What two steps should the Architect instruct the developer to implement?

Choose 2 answers

- A. Create new Page.js controller in client's cartridge. Extend the code from base and prepend the new cache middleware function to Page-Show route.
- B. Create new cache.js in client's cartridge. Copy cache.js from app_storefront_base and add a function for the Page Designer caching.
- **C. Create new cache.js in client's cartridge. Extend cache.js from app_storefront_base and add a function for the Page Designer caching.**
- **D. Create new Page.js controller in client's cartridge. Copy code from base and modify the Page-Show route to include the new cache middleware function.**

正解: C, D

解説:

To implement a specific cache period for Page Designer pages in SFRA:

- * Option A involves creating a new Page.js controller in the client's cartridge, where the existing Page- Show route can be modified to include a custom caching logic. This ensures that the specific caching requirements for Page Designer pages are met without altering the base functionality for other pages.
 - * Option D calls for extending the existing cache.js module in the client's cartridge to include a function specifically for Page Designer caching. This allows for reusing the existing caching logic while adding enhancements specific to the Page Designer pages, thus maintaining efficiency and clarity in the codebase.
- Both options provide a clean, maintainable approach to customizing caching for specific requirements in SFRA, avoiding disruptions in other areas of the site functionality.

質問 # 69

A new project for a Client will involve a few different Integrations to their middleware system resulting in four different web services. All will use the same credentials to the middleware. Each will have the same timeout, but will require a separate log file prefix. How should the Architect set this up with the Service framework using a minimal set of configuration?

- **A. Four Service Configurations, One Service Profile, One Service Credential.**
- B. One Service Configuration, Four Service Profiles, One Service Credential.
- C. Four Service Configurations, Four Service Profiles, Four Service Credentials
- D. Four Service Configurations, Four Service Profiles, One Service Credential

正解: A

解説:

For setting up multiple integrations that require the same credentials and timeout settings but need separate log file prefixes:

- * Four Service Configurations are needed to specify the unique endpoint and other specifics for each of the four web services.
 - * One Service Profile can be used for all these configurations because they share the same timeout and other settings, optimizing the configuration process.
 - * One Service Credential is sufficient since all services authenticate with the same credentials, simplifying credential management and security handling.
- This setup reduces redundancy and complexity in the service framework, ensuring a streamlined and efficient integration process while meeting all specified requirements.

質問 # 70

.....

Jpexamは君の試験に合格させるだけでなく本当の知識を学ばれます。Jpexamはあなたが100%でArch-303試験に合格させるの保証することができてまたあなたのために一年の無料の試験の練習問題と解答の更新サービス提供して、もし試験に失敗したら、弊社はすぐ全額で返金を保証いたします。
