Our company has always been following the trend of the CIPM certification. Our research and development team not only study what questions will come up in the CIPM exam, but also design powerful study tools like exam simulation software. With the Software version of our CIPM study materials, you can have the experience of the real exam which is very helpful for some candidates who lack confidence or experience of our CIPM training guide.

To be eligible to take the CIPM exam, candidates must have at least two years of experience in privacy management or a related field. They must also have completed the IAPP's Privacy Program Management course or have equivalent experience.

IAPP CIPM exam is a valuable certification for professionals who are responsible for managing and protecting personal data. CIPM exam covers a wide range of privacy-related topics and requires a significant amount of preparation and study. The CIPM Certification is becoming increasingly important in today's business environment, and can help professionals stand out in the job market and advance their careers. The IAPP offers a range of resources and training programs to help candidates prepare for the exam, making it an accessible and achievable goal for privacy professionals.

Valid Exam CIPM Preparation - Valid Real CIPM Exam

IT certification candidates are mostly working people. Therefore, most of the candidates did not have so much time to prepare for the exam. But they need a lot of time to participate in the certification exam training courses. This will not only lead to a waste of training costs, more importantly, the candidates wasted valuable time. Here, I recommend a good learning materials website. Some of the test data on the site is free, but more importantly is that it provides a realistic simulation exercises that can help you to pass the IAPP CIPM Exam. ITexamReview IAPP CIPM exam materials can not only help you save a lot of time. but also allows you to pass the exam successfully. So you have no reason not to choose it.

IAPP CIPM, or Certified Information Privacy Manager, is a certification exam that is designed for professionals who are responsible for managing and protecting the privacy of personal data. CIPM exam is offered by the International Association of Privacy Professionals (IAPP), which is the world's largest and most comprehensive global information privacy community. The CIPM Exam is designed to test the knowledge and skills of professionals who work in various industries and sectors, including legal, IT, compliance, and security.

IAPP Certified Information Privacy Manager (CIPM) Sample Questions (Q137-Q142):

NEW QUESTION # 137
SCENARIO

Please use the following to answer the next QUESTION:

Your organization, the Chicago (U.S.)-based Society for Urban Greenspace, has used the same vendor to operate all aspects of an online store for several years. As a small nonprofit, the Society cannot afford the higher-priced options, but you have been relatively satisfied with this budget vendor, Shopping Cart Saver (SCS). Yes, there have been some issues. Twice, people who purchased items from the store have had their credit card information used fraudulently subsequent to transactions on your site, but in neither case did the investigation reveal with certainty that the Society's store had been hacked. The thefts could have been employee-related.

Just as disconcerting was an incident where the organization discovered that SCS had sold information it had collected from customers to third parties. However, as Jason Roland, your SCS account representative, points out, it took only a phone call from you to clarify expectations and the "misunderstanding" has not occurred again.

As an information-technology program manager with the Society, the role of the privacy professional is only one of many you play. In all matters, however, you must consider the financial bottom line. While these problems with privacy protection have been significant, the additional revenues of sales of items such as shirts and coffee cups from the store have been significant. The Society's operating budget is slim, and all sources of revenue are essential.

Now a new challenge has arisen. Jason called to say that starting in two weeks, the customer data from the store would now be stored on a data cloud. "The good news," he says, "is that we have found a low-cost provider in Finland, where the data would also be held. So, while there may be a small charge to pass through to you, it won't be exorbitant, especially considering the advantages of a cloud." Lately, you have been hearing about cloud computing and you know it's fast becoming the new paradigm for various applications. However, you have heard mixed reviews about the potential impacts on privacy protection. You begin to research and discover that a number of the leading cloud service providers have signed a letter of intent to work together on shared conventions and technologies for privacy protection. You make a note to find out if Jason's Finnish provider is signing on.

What is the best way for your vendor to be clear about the Society's breach notification expectations?

- A. Arrange regular telephone check-ins reviewing expectations
- **B. Include notification provisions in the vendor contract**
- C. Email the regulations that require breach notifications
- D. Send a memorandum of understanding on breach notification

Answer: B

Explanation:

Explanation

This answer is the best way for Albert's vendor to be clear about the Society's breach notification expectations, as it can establish clear and binding terms and conditions for both parties regarding their roles and responsibilities for handling any data security incidents or breaches. Including notification provisions in the vendor contract can help to define what constitutes a breach, how it should be detected, reported and investigated, what information should be provided to the organization and within what time frame, what actions should be taken to mitigate or resolve the breach, and what consequences or liabilities may arise from the breach. The contract can also specify that the vendor must cooperate and coordinate with the organization in any breach notification activities to the relevant authorities, customers, partners or stakeholders.

NEW QUESTION # 138

Which statement is FALSE regarding the use of technical security controls?

- A. Technical security controls are part of a data governance strategy.
- B. A person with security knowledge should be involved with the deployment of technical security controls.
- **C. Most privacy legislation lists the types of technical security controls that must be implemented.**
- D. Technical security controls deployed for one jurisdiction often satisfy another jurisdiction.

Answer: C

Explanation:

The statement that is false regarding the use of technical security controls is that most privacy legislation lists the types of technical security controls that must be implemented. Technical security controls are the hardware and software components that protect a system against cyberattacks, such as encryption, firewalls, antivirus software, and access control mechanisms¹ However, most privacy legislation does not prescribe specific types of technical security controls that must be implemented by organizations. Instead, they usually require organizations to implement reasonable or appropriate technical security measures to protect personal data from unauthorized or unlawful access, use, disclosure, alteration, or destruction²³ The exact level and type of technical security controls may depend on various factors, such as the nature and sensitivity of the data, the risks and threats involved, the state of the art technology available, and the cost and feasibility of implementation⁴ Therefore, organizations have some flexibility and discretion in choosing the most suitable technical security controls for their data processing activities. NEW QUESTION # 139

What is least likely to be achieved by implementing a Data Lifecycle Management (DLM) program?

- A. Ensuring data is kept for no longer than necessary.
- B. Reducing storage costs.
- C. Increasing awareness of the importance of confidentiality.
- **D. Crafting policies which ensure minimal data is collected.**

Answer: D

Explanation:

Crafting policies which ensure minimal data is collected is least likely to be achieved by implementing a Data Lifecycle Management (DLM) program, as it is more related to the data collection stage, not the data management stage. A DLM program focuses on how to handle the data after it has been collected, such as how to store, use, share, and dispose of it. The other options are more likely to be achieved by implementing a DLM program, as they help to optimize the data storage costs, comply with the data retention obligations, and protect the data confidentiality. NEW QUESTION # 140

SCENARIO

Please use the following to answer the next QUESTION:

Perhaps Jack Kelly should have stayed in the U.S. He enjoys a formidable reputation inside the company, Special Handling Shipping, for his work in reforming certain "rogue" offices. Last year, news broke that a police sting operation had revealed a drug ring operating in the Providence, Rhode Island office in the United States. Video from the office's video surveillance cameras leaked to news operations showed a drug exchange between Special Handling staff and undercover officers.

In the wake of this incident, Kelly had been sent to Providence to change the "hands off" culture that upper management believed had let the criminal elements conduct their illicit transactions. After a few weeks under Kelly's direction, the office became a model of efficiency and customer service. Kelly monitored his workers' activities using the same cameras that had recorded the illegal conduct of their former co-workers.

Now Kelly has been charged with turning around the office in Cork, Ireland, another trouble spot. The company has received numerous reports of the staff leaving the office unattended. When Kelly arrived, he found that even when present, the staff often spent their days socializing or conducting personal business on their mobile phones. Again, he observed their behaviors using surveillance cameras. He issued written reprimands to six staff members based on the first day of video alone.

Much to Kelly's surprise and chagrin, he and the company are now under investigation by the Data Protection Commissioner of Ireland for allegedly violating the privacy rights of employees. Kelly was told that the company's license for the cameras listed facility security as their main use, but he does not know why this matters. He has pointed out to his superiors that the company's training programs on privacy protection and data collection mention nothing about surveillance video.

You are a privacy protection consultant, hired by the company to assess this incident, report on the legal and compliance issues, and recommend next steps.

Knowing that the regulator is now investigating, what would be the best step to take?

- A. Use your background and knowledge to set a course of action.
- B. If you know the organization is guilty, advise it to accept the punishment.
- C. Negotiate the terms of a settlement before formal legal action takes place.
- **D. Consult an attorney experienced in privacy law and litigation.**

Answer: D

NEW QUESTION # 141

SCENARIO

Please use the following to answer the next QUESTION:

Manasa is a product manager at Omnipresent Omnimedia, where she is responsible for leading the development of the company's flagship product, the Handy Helper. The Handy Helper is an application that can be used in the home to manage family calendars,

do online shopping, and schedule doctor appointments. After having had a successful launch in the United States, the Handy Helper is about to be made available for purchase worldwide.

The packaging and user guide for the Handy Helper indicate that it is a "privacy friendly" product suitable for the whole family, including children, but does not provide any further detail or privacy notice. In order to use the application, a family creates a single account, and the primary user has access to all information about the other users. Upon start up, the primary user must check a box consenting to receive marketing emails from Omnipresent Omnimedia and selected marketing partners in order to be able to use the application.

Sanjay, the head of privacy at Omnipresent Omnimedia, was working on an agreement with a European distributor of Handy Helper when he fielded many Questions about the product from the distributor. Sanjay needed to look more closely at the product in order to be able to answer the Questions as he was not involved in the product development process.

In speaking with the product team, he learned that the Handy Helper collected and stored all of a user's sensitive medical information for the medical appointment scheduler. In fact, all of the user's information is stored by Handy Helper for the additional purpose of creating additional products and to analyze usage of the product. This data is all stored in the cloud and is encrypted both during transmission and at rest.

Consistent with the CEO's philosophy that great new product ideas can come from anyone, all Omnipresent Omnimedia employees have access to user data under a program called Eureka. Omnipresent Omnimedia is hoping that at some point in the future, the data will reveal insights that could be used to create a fully automated application that runs on artificial intelligence, but as of yet, Eureka is not well-defined and is considered a long-term goal.

What step in the system development process did Manasa skip?

- A. Work with Sanjay to review any necessary privacy requirements to be built into the product.
- B. Build the artificial intelligence feature so that users would not have to input sensitive information into the Handy Helper.
- C. Obtain express written consent from users of the Handy Helper regarding marketing.
- **D. Certify that the Handy Helper meets the requirements of the EU-US Privacy Shield Framework.**

Answer: D
