

Pass The Exam With Real Network Appliance NS0-521 Questions

BONUS!!! Download part of Pass4suresVCE NS0-521 dumps for free: <https://drive.google.com/open?id=1yhICXuMoB4LvFKnfau6P89TIM0UCZ3a>

The authority and validity of Network Appliance NS0-521 pdf practice are the 100% pass guarantee for all the IT candidates. We ensure you one year free update after purchase, so you can obtain the latest information about NS0-521 test cram review without costing extra money. Besides, you can download the Pass4suresVCE NS0-521 Torrent dumps and install it on your electronic device, thus you can review at anytime and anywhere available. The fast study and NS0-521 valid practice will facilitate your coming test.

Network Appliance NS0-521 Exam Syllabus Topics:

Topic	Details
Topic 1	Storage Capacity Planning: In this section of the exam, the focus is on the analysis of storage requirements, forecast growth, and design of scalable storage solutions to meet evolving business needs.
Topic 2	ONTAP Upgrade and Migration: In this section, the focus is on the expertise in upgrading and migrating ONTAP systems, including planning, data migration strategies, and ensuring seamless transitions.
Topic 3	Data Protection and Disaster Recovery: This domain covers how to implement robust data protection techniques, such as snapshots, replication, and backup solutions, to ensure data integrity and facilitate disaster recovery.
Topic 4	Storage Performance Optimization: In this section, the focus is on how to discover the art of optimizing storage performance through effective workload management, caching strategies, and system tuning for demanding applications.
Topic 5	Storage Virtualization and Automation: This section explores the benefits of storage virtualization and implements automation techniques to streamline storage management and improve operational efficiency.
Topic 6	ONTAP System Configuration: This domain covers the skills to configure and optimize ONTAP systems, including cluster creation, node management, and data protection strategies.

Pass4sure NS0-521 Study Materials & NS0-521 Free Brain Dumps

Our NS0-521 training materials offer you everything you need to take the certification and face the challenge of professional knowledge points. The NS0-521 exam dumps are written and approved by our IT specialist based on the real questions of the formal test. Our latest learning materials contain the valid test questions and correct NS0-521 Test Answers along with detailed explanation. We will give your money back in full if you lose exam with our NS0-521 practice exam.

Network Appliance Implementation Engineer - SAN ONTAP Exam Sample Questions (Q112-Q117):

NEW QUESTION # 112

An administrator runs the `lun igroup show -insrar.ee` command on a NetApp ONTAP SAN.

```
The output lists the following:
Protocol: fcp
Initiators: server1.netapp.com
```

Based on the output, what is the initiator type?

- A. IQN
- **B. WWPN**
- C. NQN
- D. WWNN

Answer: B

Explanation:

Based on the output of the command `lun igroup show -instance`, which lists the protocol as `fc` and the initiator as `server1.netapp.com`, the initiator type is WWPN (World Wide Port Name). In Fibre Channel Protocol (FCP) environments, WWPNs are used to uniquely identify Fibre Channel devices. This contrasts with IQNs used in iSCSI, and NQNs used in NVMe over Fabrics.

For more details, refer to:

* NetApp Documentation on Initiators

NEW QUESTION # 113

A customer has a two-node NetApp AFF ASA cluster in an environment with a Cisco Fibre Channel SAN and Cisco UCS Servers. The customer wants to upgrade the UCS Server BIOS and the Cisco NX-OS system running on the switches. Which NetApp resource should be consulted to check compatibility with the new versions?

- A. Active IQ Config Advisor
- B. BlueXP digital advisor
- C. Hardware Universe
- **D. Interoperability Matrix Tool (IMT)**

Answer: D

Explanation:

When planning to upgrade the UCS Server BIOS and Cisco NX-OS system running on the switches in a NetApp AFF ASA cluster environment, the Interoperability Matrix Tool (IMT) is the recommended resource to check compatibility with the new versions. The IMT provides detailed compatibility information for various hardware and software components, ensuring that the planned upgrades will not cause any interoperability issues.

NEW QUESTION # 114

A LUN is displaying 90% used space in the NetApp ONTAP CLI, but a Windows Server shows only 10% used space. What is the first step to take to address this issue?

- A. Disable automatic resizing.
- B. Enable automatic resizing.
- C. Disable space allocation.
- **D. Enable space allocation.**

Answer: D

Explanation:

When a LUN shows 90% used space in the NetApp ONTAP CLI but a Windows Server shows only 10% used space, the discrepancy is often due to how space allocation is handled between the two systems. Enabling space allocation ensures that the ONTAP system accurately reflects the actual space usage as reported by the host system, in this case, the Windows Server. This adjustment allows ONTAP to reclaim and manage space more effectively, aligning the reported usage between the ONTAP system and the host.

NEW QUESTION # 115

A customer has data in a LUN on an existing third-party SAN storage system that will be migrated to a new NetApp AFF A400 all-flash MetroCluster system. The host connected to the LUN is a Windows Server 2019 system. In this scenario, which two methods are supported? (Choose two.)

- A. Foreign LUN Import in online mode
- B. SnapMirror Business Continuity
- C. Client-side copy of the data
- D. Foreign LUN Import in offline mode

Answer: C,D

Explanation:

Client-side copy uses host-based tools to copy data from the third-party LUN to the new NetApp system and is supported for migrations.

Foreign LUN Import in offline mode allows importing LUNs from third-party storage when the host is offline, which is supported for data migration to ONTAP.

NEW QUESTION # 116

A customer has data in a LUN on an existing third-party SAN storage system that will be migrated to a new NetApp AFF A400 all-flash MetroCluster system. The host connected to the LUN is a Windows Server 2019 system. In this scenario, which two methods are supported? (Choose two.)

- A. Client-side copy of the data
- B. Foreign LUN Import in online mode
- C. SnapMirror Business Continuity
- D. Foreign LUN Import in offline mode

Answer: B,D

Explanation:

To migrate data from a LUN on an existing third-party SAN storage system to a new NetApp AFF A400 all-flash MetroCluster system, the supported methods include:

* Foreign LUN Import in online mode: This method allows for data migration without significant downtime, enabling the system to continue serving data while the migration process is ongoing.

* Foreign LUN Import in offline mode: This method involves taking the LUN offline during the migration process, which may be necessary in certain scenarios to ensure data integrity.

For more details, refer to:

* NetApp Documentation on Foreign LUN Import

* NetApp Community on LUN Import Methods

NEW QUESTION # 117

.....

We are committed to providing our customers with the most up-to-date and accurate Implementation Engineer - SAN ONTAP Exam (NS0-521) preparation material. That's why we offer free demos and up to 1 year of free Network Appliance Dumps updates if the NS0-521 certification exam content changes after purchasing our product. With these offers, our customers can be assured that they have the latest and most reliable prepare for your Implementation Engineer - SAN ONTAP Exam (NS0-521) preparation material.
