One of the great features of our Professional-Cloud-DevOps-Engineer training material is our Professional-Cloud-DevOps-Engineer pdf questions. Google Cloud Certified - Professional Cloud DevOps Engineer Exam exam questions allow you to prepare for the real Professional-Cloud-DevOps-Engineer exam and will help you with the self-assessment. You can easily pass the Professional-Cloud-DevOps-Engineer exam by using Professional-Cloud-DevOps-Engineer dumps pdf. Moreover, you will get all the updated Professional-Cloud-DevOps-Engineer Questions with verified answers. If you want to prepare yourself for the real Google Cloud Certified - Professional Cloud DevOps Engineer Exam exam, then it is one of the most important ways to improve your Professional-Cloud-DevOps-Engineer preparation level. We provide 100% money back guarantee on all Professional-Cloud-DevOps-Engineer braindumps products.

Easy4Engine provides an opportunity for fulfilling your career goals and significantly ease your way to become Professional-Cloud-DevOps-Engineer Certified professional. While you are going attend your Professional-Cloud-DevOps-Engineer exam, in advance knowledge assessment skips your worries regarding actual exam format. Groom up your technical skills with Easy4Engine practice test training that has no substitute at all. Get the best possible training through Easy4Engine; our practice tests particularly focus the key contents of Professional-Cloud-DevOps-Engineer Certification exams. Easy4Engine leads the Professional-Cloud-DevOps-

Engineer exam candidates towards perfection while enabling them to earn the Professional-Cloud-DevOps-Engineer credentials at the very first attempt. The way our products induce practical learning approach, there is no close alternative.

## Practice Google Professional-Cloud-DevOps-Engineer Test Online & Reliable Professional-Cloud-DevOps-Engineer Exam Vce

Choosing our Professional-Cloud-DevOps-Engineer learning guide is not only an enrichment of learning content, but also an opportunity to improve our own discovery space. Our Professional-Cloud-DevOps-Engineer study dumps could bring huge impact to your personal development, because in the process of we are looking for a job, hold a certificate you have more advantage than your competitors, the company will be a greater probability of you. After using our Professional-Cloud-DevOps-Engineer Study Dumps, users can devote more time and energy to focus on their major and makes themselves more and more prominent in the professional field. Therefore, our Professional-Cloud-DevOps-Engineer exam materials can help you achieve multiple returns in the future, provide you with more opportunities to pursue higher life goals, and create a higher quality of life.

### Google Cloud Certified - Professional Cloud DevOps Engineer Exam Sample Questions (Q40-Q45):

#### NEW QUESTION # 40

You support an application running on App Engine. The application is used globally and accessed from various device types. You want to know the number of connections. You are using Stackdriver Monitoring for App Engine. What metric should you use?

- A. flex/connections/current
- B. tcp\_ssl\_proxy/new\_connections
- C. flex/instance/connections/current
- D. tcp\_ssl\_proxy/open\_connections

**Answer: C**

#### NEW QUESTION # 41

You support a production service that runs on a single Compute Engine instance. You regularly need to spend time on recreating the service by deleting the crashing instance and creating a new instance based on the relevant image. You want to reduce the time spent performing manual operations while following Site Reliability Engineering principles. What should you do?

- A. Add a Load Balancer in front of the Compute Engine instance and use health checks to determine the system status.
- B. Create a Stackdriver Monitoring dashboard with SMS alerts to be able to start recreating the crashed instance promptly after it has crashed.
- C. File a bug with the development team so they can find the root cause of the crashing instance.
- D. Create a Managed Instance Group with a single instance and use health checks to determine the system status.

**Answer: D**

#### NEW QUESTION # 42

Your company runs services by using multiple globally distributed Google Kubernetes Engine (GKE) clusters. Your operations team has set up workload monitoring that uses Prometheus-based tooling for metrics alerts and generating dashboards. This setup does not provide a method to view metrics globally across all clusters. You need to implement a scalable solution to support global Prometheus querying and minimize management overhead. What should you do?

- A. Configure Google Cloud Managed Service for Prometheus
- B. Configure Prometheus cross-service federation for centralized data access
- C. Configure workload metrics within Cloud Operations for GKE
- D. Configure Prometheus hierarchical federation for centralized data access

**Answer: A**

Explanation:

#### Explanation

The best option for implementing a scalable solution to support global Prometheus querying and minimize management overhead is to use Google Cloud Managed Service for Prometheus. Google Cloud Managed Service for Prometheus is a fully managed service that allows you to collect, query, and visualize metrics from your GKE clusters using Prometheus-based tooling. You can use Google Cloud Managed Service for Prometheus to query metrics across multiple clusters and regions using a global view. You can also use Google Cloud Managed Service for Prometheus to integrate with other Google Cloud services, such as Cloud Monitoring, Cloud Logging, and BigQuery. By using Google Cloud Managed Service for Prometheus, you can avoid managing and scaling your own Prometheus servers and focus on your application performance.

#### NEW QUESTION # 43

You manage an application that runs in Google Kubernetes Engine (GKE) and uses the blue/green deployment methodology. Extracts of the Kubernetes manifests are shown below:

The Deployment app-green was updated to use the new version of the application. During post-deployment monitoring, you notice that the majority of user requests are failing. You did not observe this behavior in the testing environment. You need to mitigate the incident's impact on users and enable the developers to troubleshoot the issue. What should you do?

- A. Update the Deployment app-blue to use the new version of the application.
- B. Update the Deployment app-green to use the previous version of the application.
- C. Change the selector on the Service app-2vc to app: my-app.
- D. Change the selector on the Service app-svc to app: my-app, version: blue.

**Answer: C**

#### NEW QUESTION # 44

You recently deployed your application in Google Kubernetes Engine (GKE) and now need to release a new version of the application. You need the ability to instantly roll back to the previous version of the application in case there are issues with the new version. Which deployment model should you use?

- A. Perform a rolling deployment and test your new application after the deployment is complete.
- B. Perform A/B testing, and test your application periodically after the deployment is complete.
- C. Perform a canary deployment, and test your new application periodically after the new version is deployed.
- D. Perform a blue/green deployment and test your new application after the deployment is complete.

**Answer: D**

#### Explanation:

The best deployment model for releasing a new version of your application in GKE with the ability to instantly roll back to the previous version is to perform a blue/green deployment and test your new application after the deployment is complete. A blue/green deployment is a deployment strategy that involves creating two identical environments, one running the current version of the application (blue) and one running the new version of the application (green). The traffic is switched from blue to green after testing the new version, and if any issues are discovered, the traffic can be switched back to blue instantly. This way, you can minimize downtime and risk during deployment.

#### NEW QUESTION # 45

.....

If you think it is an adventure for purchasing our Google Professional-Cloud-DevOps-Engineer braindump, life is also a great adventure. Before many successful people obtained achievements, they had an adventure experience. Moreover, the candidates that use our Google Professional-Cloud-DevOps-Engineer Test Questions and test answers can easily verify their quality. Easy4Engine Google Professional-Cloud-DevOps-Engineer certification training ensured their success.
