1z0-076 New Guide Files | 1z0-076 Review Guide

BONUS!!! Download part of BraindumpStudy 1z0-076 dumps for free: https://drive.google.com/open?id=1MXbGYboHwCuG_4fQlOYbqhiGHNEeS_Ow

Passing an exam requires diligent practice, and using the right study Oracle Certification Exams material is crucial for optimal performance. With this in mind, BraindumpStudy has introduced a range of innovative 1z0-076 practice test formats to help candidates prepare for their 1z0-076. The platform offers three distinct formats, including a desktop-based Oracle 1z0-076 practice test software, a web-based practice test, and a convenient PDF format.

Oracle 1z0-076 Exam Syllabus Topics:

Topic	Details
Topic 1	• Enhanced Client Connectivity in a Data Guard Environment: This topic focuses on enhancing client connectivity in a Data Guard setup and implementing failover procedures for seamless client redirection. It also covers application continuity to ensure uninterrupted operations during role transitions.
Topic 2	• Oracle Data Guard Basics: This topic covers the essential architecture and concepts of Oracle Data Guard. It includes sub-topics such as the physical and logical standby database comparison, benefits of Data Guard, and its integration with multi-tenant databases.
Topic 3	• Creating a Data Guard Broker Configuration: This section delves into the practical aspects of creating and managing a Data Guard broker configuration, including command-line and Enterprise Manager approaches.

Topic 4	• Creating a Logical Standby Database: This topic guides users through the process of creating and managing a logical standby database, including SQL Apply filtering.
Topic 6	• Monitoring a Data Guard Broker Configuration: The topic covers the use of Enterprise Manager and DGMGRL to monitor Data Guard configurations and explains the various data protection modes available.
Topic 7	• Oracle Data Guard Broker Basics: An overview of the Data Guard broker, its architecture, components, benefits, and configurations, is provided here. It serves as an introduction to the tool used for managing Data Guard configurations.
Topic 8	• Managing Physical Standby Files After Structural Changes on the Primary Database: The topic covers managing structural changes in the primary database and their impact on physical standby files.
Topic 9	• Patching and Upgrading Databases in a Data Guard Configuration: This section provides guidance on patching and upgrading databases in a Data Guard environment, along with performance optimization techniques and monitoring considerations.
Topic 10	• Using Oracle Active Data Guard: Supported Workloads in Read-Only Standby Databases: Here, the usage of physical standby databases for real-time queries is discussed.
Topic 11	• Using Flashback Database in a Data Guard Configuration: This topic covers the configuration and advantages of using Flashback Database in a Data Guard setup, as well as the process of enabling fast-start failover for seamless role changes.

Quiz Oracle - 1z0-076 –Newest New Guide Files

If you are preparing for the exam in order to get the related 1z0-076 certification, here comes a piece of good news for you. The 1z0-076 guide torrent is compiled by our company now has been praised as the secret weapon for candidates who want to pass the 1z0-076 Exam as well as getting the related certification, so you are so lucky to click into this website where you can get your secret weapon. Our reputation for compiling the best 1z0-076 training materials has created a sound base for our future business.

Oracle Database 19c: Data Guard Administration Sample Questions (Q69-Q74):

NEW QUESTION # 69
Your Data Guard environment consists of these components and settings:
1. A primary database
2. A remote physical standby database
3. Real-time query is enabled.
4. The redo transport mode is set to SYNC.
5. The protection mode is set to Maximum Availability.
You notice that queries executed on the physical standby database receive errors: ORA-03172:
STANDBY_MAX_DATA_DELAY of 15 seconds exceeded. Which two would you recommend to avoid this error?

- A. Change the protection mode to Maximum Protection.
- B. Increase the number of standby redo log files on the primary database.
- C. Change the protection mode to Maximum Performance.
- D. Increase the size of the buffer cache on the standby database instance.
- E. Increase the network bandwidth between the primary and standby databases.
- F. Reduce I/O latency for the storage used by the primary database.

Answer: E,F

Explanation:
The ORA-03172: STANDBY_MAX_DATA_DELAY error indicates that the real-time query on the physical standby database is

experiencing delays beyond the specified maximum data delay threshold. Increasing the network bandwidth (Option E) can enhance the speed at which redo data is transferred from the primary to the standby database, thereby reducing the likelihood of exceeding the STANDBY_MAX_DATA_DELAY threshold. Reducing I/O latency on the primary database's storage (Option B) ensures that redo data is generated and shipped more efficiently, further mitigating the risk of delay. These actions, focused on optimizing data transfer and processing speed, address the root causes of the ORA-03172 error in a synchronous Data Guard configuration operating in Maximum Availability mode.

NEW QUESTION # 70
Which four factors can influence the rate of SQL apply on a logical standby database?

- A. the number of applier processes
- B. the number of PREPAER processes
- C. the number of coordinator processes on the standby database instance
- D. the size of the undo tablespace on the logical standby database
- E. the number of full table scans performed by SQL apply
- F. the size of the shared pool

Answer: A,B,C,E

Explanation:
The rate of SQL apply on a logical standby database can be influenced by:
* A: The number of PREPARER processes (which seems to be a typographical error and should read as PREPARER or similar) which prepare the redo data for the applier processes.
* B: The number of coordinator processes on the standby database instance which coordinate the SQL apply activities.
* C: The number of full table scans performed by SQL apply since full table scans can be resource-intensive and slow down the apply rate.
* E: The number of applier processes which apply the redo data to the logical standby database.
Option D is incorrect as the size of the undo tablespace on the logical standby database is more likely to affect the SQL apply lag rather than the rate of SQL apply.
Option F is incorrect because the size of the shared pool would typically not influence the rate of SQL apply.
The shared pool is more related to the caching of shared SQL and PL/SQL code and control structures.
References: Oracle's documentation on SQL Apply in Data Guard configurations discusses the factors affecting the performance of SQL Apply operations on logical standby databases.

NEW QUESTION # 71
Which THREE statements are true........ open in real time query mode, which becomes a new.

- A. User sessions can be retained.
- B. All current buffers can be retained.
- C. Sessions that have long running queries can be retained.
- D. Sessions that are using database links
- E. All sessions are disconnected and all
- F. User sessions and Current Buffers are maintained by default.

Answer: A,B,E

Explanation:
When a physical standby database is opened in real-time query mode, which may be referred to as real-time apply when using Active Data Guard, certain operations can disrupt ongoing sessions. However, with features like Application Continuity and the proper configuration of initialization parameters such as STANDBY_DB_PRESERVE_STATES, user sessions and current buffers may be preserved during role transitions such as a switchover or failover. Specifically, the STANDBY_DB_PRESERVE_STATES parameter can be set to preserve none, all, or only user sessions during such transitions. This ensures that in-flight transactions are not lost and that users do not experience disruptions during the role transitions of a physical standby database.

NEW QUESTION # 72

Which two are true concerning the configuring of Flashback database in a Data Guard environment?

- A. It is a prerequisite for the use of Fast Start Failover.
- B. It permits a physical standby database to be converted to a snapshot standby database.
- C. It is required in order for a snapshot standby database to be converted to a physical standby database.
- D. It enables the use of far sync instances.
- E. It permits a primary database that was disabled after failover to be reinstated as a standby.

Answer: B,E

NEW QUESTION # 73

Which two are prerequisites for configuring flashback database for Oracle 19c databases, in a Data Guard environment?

- A. The data guard broker must be used.
- B. The Data Guard real-time apply feature must be enabled.
- C. A fast recovery area must be configured.
- D. A far sync instance must be configured to flash back a standby when the primary has been flashed back.
- E. The database must be in ARCHTVELOG mode.

Answer: C,E

Explanation:
A fast recovery area must be configured (B): Flashback Database requires a fast recovery area to be set up because flashback logs are stored there. The fast recovery area is a unified storage location for all recovery-related files and activities.
The database must be in ARCHIVELOG mode (C): Flashback Database operation relies on the ability to archive redo logs.
Therefore, the database must be running in ARCHIVELOG mode for Flashback Database to be enabled.
