Salesforce Data-Architect Latest Study Plan - Valid Test Data-Architect Experience

VerifiedDumps Salesforce Data-Architect exam preparation material is designed to help you pass the Salesforce Data-Architect exam on your first attempt. The formats mentioned above can be used right away after buying the product. So what are waiting for, get our Salesforce Certified Data Architect (Data-Architect) study material today and start your constructive progress towards your goals. The rest is assured by us when you give it your all.

Salesforce Data-Architect (Salesforce Certified Data Architect) Certification Exam is a challenging but rewarding certification that validates the knowledge and skills of professionals who work with Salesforce data architecture. It is a highly respected credential in

the industry and is recognized by employers as a mark of excellence. If you are looking to advance your career in the Salesforce ecosystem, this certification is definitely worth considering.

Salesforce Data-Architect Exam is a challenging certification program that requires candidates to demonstrate their expertise in designing and implementing data architecture solutions that meet the needs of organizations using Salesforce. Data-Architect Exam covers a wide range of topics, including data modeling, data management, data governance, data security, and data migration. Candidates must also be familiar with the latest trends and best practices in data management and governance, including data privacy and compliance regulations.

Salesforce Certified Data Architect Sample Questions (Q246-Q251):

NEW QUESTION # 246

Northern trail Outfitters (NTO) runs its entire out of an enterprise data warehouse (EDW), NTD's sales team starting to use Salesforce after a recent implementation, but currently lacks data required to advanced and opportunity to the next stage.
NTO's management has research Salesforce Connect and would like to use It to virtualize and report on data from the EDW within Salesforce. NTO will be running thousands of reports per day across 10 to 15 external objects.
What should a data architect consider before implementing Salesforce Connect for reporting?

- A. Maximum external objects per org
- B. Maximum page size for server-driven paging
- C. OData callout limits per day
- D. Maximum number for records returned

Answer: C

Explanation:
According to the Salesforce Connect Reporting blog post, one of the considerations for using Salesforce Connect for reporting is the OData callout limits per day. The blog post states that "Salesforce Connect has a limit of 100,000 callouts per day. This limit is shared across all external data sources in your org. If you exceed this limit, you will receive an error message and no more callouts will be allowed until the next day." Therefore, a data architect should consider this limit before implementing Salesforce Connect for reporting.

NEW QUESTION # 247

UC is planning a massive SF implementation with large volumes of data. As part of the org's implementation, several roles, territories, groups, and sharing rules have been configured. The data architect has been tasked with loading all of the required data, including user data, in a timely manner.
What should a data architect do to minimize data load times due to system calculations?

- A. Enable defer sharing calculations, and suspend sharing rule calculations
- B. Leverage the Bulk API and concurrent processing with multiple batches
- C. Load the data through data loader, and turn on parallel processing.
- D. Enable granular locking to avoid "UNABLE_TO_LOCK_ROW" error.

Answer: A

Explanation:
The correct answer is A, enable defer sharing calculations, and suspend sharing rule calculations. Defer sharing calculations and suspend sharing rule calculations are features that allow you to temporarily disable the automatic recalculation of sharing rules when you load large volumes of data. This can improve the performance and speed of your data load process by avoiding unnecessary system calculations. Loading the data through data loader, leveraging the bulk API, or enabling granular locking are also options that can help with data load times, but they do not directly address the system calculations issue.

NEW QUESTION # 248

Universal Containers wishes to maintain Lead data from Leads even after they are deleted and cleared from the Recycle Bin. What approach should be implemented to achieve this solution?

- A. Use a Converted Lead report to display data on Leads that have been deleted.
- B. Send data to a Data Warehouse and mark Leads as deleted in that system.
- C. Query Salesforce with the queryAll API method or using the ALL ROWS SOQL keywords.

- D. Use a Lead standard report and filter on the IsDeleted standard field.

Answer: B

NEW QUESTION # 249
Universal Containers (UC) requires 2 years of customer related cases to be available on SF for operational reporting. Any cases older than 2 years and upto 7 years need to be available on demand to the Service agents. UC creates 5 million cases per yr. Which 2 data archiving strategies should a data architect recommend? Choose 2 options:

- A. Sync cases older than 2 years to an external database, and provide access to Service agents to the database
- B. Use Heroku and external objects to display cases older than 2 years and bulk API to hard delete from Salesforce.
- C. Use custom objects for cases older than 2 years and use nightly batch to move them.
- D. Use Big objects for cases older than 2 years, and use nightly batch to move them.

Answer: B,D

NEW QUESTION # 250
Universal Containers (UC) is implementing Salesforce Sales Cloud and Service Cloud. As part of their implementation, they are planning to create a new custom object (Shipments), which will have a lookup relationship to Opportunities. When creating shipment records, Salesforce users need to manually input a customer reference, which is provided by customers, and will be stored in the Customer_Reference__c text custom field. Support agents will likely use this customer reference to search for Shipment records when resolving shipping issues. UC is expecting to have around 5 million shipment records created per year. What is the recommended solution to ensure that support agents using global search and reports can quickly find shipment records?

- A. Set Customer-Reference_c as an External ID (unique).
- B. Implement an archiving process for shipment records created after five years.
- C. Set Customer-Reference_c as an External ID (non-unique).
- D. Implement an archiving process for shipment records created after three years.

Answer: A
