

Pass Guaranteed 2026 IBM C1000-189: IBM Instana Observability v1.0.277 Administrator - Professional–High Hit-Rate Pass Guide

Benefits of IBM Instana Observability

P.S. Free & New C1000-189 dumps are available on Google Drive shared by Prep4pass: https://drive.google.com/open?id=1CG8B6omYrpm2W_rwe3jrJC5aAeXLBaKQ

Our C1000-189 practice materials not only reflect the authentic knowledge of this area, but contents the new changes happened these years. They are reflection of our experts' authority. By assiduous working on them, they are dependable backup and academic uplift. So our experts' team made the C1000-189 Guide dumps superior with their laborious effort. Of course the quality of our C1000-189 exam quiz is high.

IBM C1000-189 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> • Integration: This section of the exam measures the skills of Integration Engineers and assesses their proficiency in connecting Instana with external monitoring and automation tools. Candidates must demonstrate knowledge of integrating agent-based systems such as Omegamon, ITM, and ITCAM, as well as external platforms like Prometheus and Grafana. The section also includes configuring alert channels, automation actions, and utilizing the Instana REST API to support customized workflows and data visibility.
Topic 2	<ul style="list-style-type: none"> • Operations: This section of the exam measures the skills of Application Monitoring Specialists and covers daily operational tasks for managing Instana environments. It includes configuring website and application monitoring, handling synthetic monitoring, and creating incidents, issues, and alerts. Candidates will analyze infrastructure performance, set maintenance windows, and design custom dashboards. They are also expected to interpret golden signals, evaluate alerts, use analytics, and perform backup or restore operations to maintain optimal system performance.
Topic 3	<ul style="list-style-type: none"> • Installation: This section of the exam measures the skills of System Implementation Specialists and focuses on installing and deploying Instana across different environments. It includes installing the Instana backend, deploying and configuring agents, and migrating existing Instana setups. Candidates will also demonstrate their ability to implement Synthetic Monitoring and manage Points of Presence (PoPs) effectively for end-to-end performance validation.

2026 C1000-189 Pass Guide | Excellent 100% Free C1000-189 Hot Spot Questions

Our C1000-189 exam questions just focus on what is important and help you achieve your goal. When the reviewing process gets some tense, our C1000-189 practice materials will solve your problems with efficiency. With high-quality C1000-189 Guide materials and flexible choices of learning mode, they would bring about the convenience and easiness for you. Every page is carefully arranged by our experts with clear layout and helpful knowledge to remember.

IBM Instana Observability v1.0.277 Administrator - Professional Sample Questions (Q23-Q28):

NEW QUESTION # 23

What happens when multiple agent configuration files are created and put alongside the main configuration.yaml?

- A. An error is thrown since only one configuration file is allowed at any time.
- B. Only the first file is processed while other files are silently ignored.
- C. All configuration files are merged in alphabetical order.
- **D. The configuration file is read in alphabetical order.**

Answer: D

Explanation:

IBM Instana Observability's agent supports modularized configuration through multiple YAML configuration fragments within its configuration directory. As described in the documentation: "When multiple configuration files exist alongside the main configuration.yaml, the agent reads each in alphabetical order and applies configurations sequentially." This mechanism supports composable and layered configuration management, allowing base settings in configuration.yaml to be overridden or extended by secondary fragments. The key design principle is deterministic merge order-guaranteeing predictable configuration hierarchies across deployments. This method improves maintainability in large environments by facilitating separation of sensitive and technology-specific settings while maintaining a consistent merge process. IBM warns not to name multiple files with overlapping keys unless intentional overrides are desired. The merge is additive and case-sensitive, processed lexicographically, providing administrators both flexibility and traceability for troubleshooting and auditing. There is no error generated when multiple files are present; rather, Instana agent gracefully integrates them during initialization, a behavior that promotes advanced configuration modularity for complex deployments.

NEW QUESTION # 24

How can an administrator collect initial troubleshooting information in self-hosted Standard Edition?

- **A. stanctl must-gather**
- B. stanctl trace
- C. stanctl debug
- D. stanctl collect

Answer: A

Explanation:

Administrators managing self-hosted Standard Edition clusters can generate diagnostic bundles using the verified IBM command `stanctl must-gather`. The documentation specifies: "The '`stanctl must-gather`' command collects logs, configuration files, and relevant diagnostic output from all components for analysis and support submission." This standardized data-collection utility aggregates information across microservices and stores it into an archive for troubleshooting. Other commands (`trace`, `debug`, `collect`) serve specific functions but do not generate the comprehensive support package expected by IBM Support. `Must-gather` ensures inclusion of system status, resource snapshots, and error contexts, effectively accelerating issue resolution. This feature parallels other IBM products' `must-gather` standards, ensuring consistent methodology for customer support cases and automated diagnostics workflow.

NEW QUESTION # 25

Which statement correctly describes the usage and migration options for the Self-Hosted Standard Edition?

- A. It is not intended for new installations, only for upgrades from the Self-Hosted Classic Edition.
- B. It is only for new installations, but data can be migrated from a Self-Hosted Classic Edition.
- C. It can be used for both new installations and upgrades from any edition.
- **D. It does not support data migration from the Self-Hosted Classic Edition.**

Answer: D

Explanation:

IBM's product migration matrix for Instana confirms strict usage boundaries between different self-hosted editions. The documentation clarifies: "Instana Self-Hosted Standard Edition does not support migration of data from the Self-Hosted Classic Edition." Each edition uses different architectural components, storage formats, and telemetry databases. Therefore, upgrading from Classic to Standard Edition requires a fresh install, without direct movement of monitoring history or historical configuration. Upgrades are only supported within the same product branch, ensuring compatibility and stability. Attempting migration from the Classic Edition is unsupported and risks operational deviation. Standard Edition can be newly installed but not upgraded from the Classic base, as per IBM's verified change and upgrade path guidance.

NEW QUESTION # 26

What happens if the same key is used in both global and alert-specific custom payload configurations in Instana?

- A. Both values are concatenated.
- B. The alert is canceled due to conflict.
- C. The global value overrides the alert-specific value.
- D. The alert-specific value overrides the global value.

Answer: D

Explanation:

IBM Instana documents the merge logic of custom payloads for alerts and global configurations very clearly. The rule states: "If the same key is defined in both a global custom payload and an alert-specific payload, the value from the alert-specific payload will override the global value for that key." This ensures alert context management is precise, enabling targeted incident response with the most relevant and high-priority data. There is no concatenation, and no alert cancellation or error is triggered as Instana resolves key collisions silently by giving precedence to the more granular, context-specific setting (alert-level). This verified behavior guarantees custom alert events always contain relevant payloads, supporting accurate automated remediation or escalation.

NEW QUESTION # 27

What are the two SLI types Instana supports while configuring the service level objectives?

- A. Event count based
- B. Traces based
- C. Time based
- D. Alerts based
- E. Error logs based

Answer: A,B

Explanation:

IBM Instana's Service Level Indicator (SLI) configuration capabilities emphasize trace-based and event count-based SLIs. The verified guide details: "Instana supports SLI definitions based on distributed trace data and event counts, such as request rate, error rate, or latency." Trace-based SLIs allow direct measurement of real user or synthetic transactions for detailed performance objectives (e.g., 99th percentile response time). Event count-based SLIs track operational markers such as number of errors, alerts, or specific incidents-essential for regulatory uptime or compliance audits. Error logs, time-based or alert-based SLIs can be visualized but are not supported as direct SLI definitions by Instana, according to verified IBM configuration steps. The combination of traces and event counts provides the flexibility to set quality objectives, measure reliability, and drive alerting in line with SRE principles.

NEW QUESTION # 28

.....

Did you often feel helpless and confused during the preparation of the exam? Do you want to find an expert to help but feel bad about the expensive tutoring costs? Don't worry. C1000-189 learning materials can help you to solve all the problems. C1000-189 learning material always regards helping students to pass the exam as it is own mission. With C1000-189 learning materials, you only need to pay half the money to get the help of the most authoritative experts.
