NewDumps為你提供真實的環境中找到的真正的Ping Identity的PAP-001考試的準備過程, 如果你是初學者或是想提高你的專業技能, NewDumps Ping Identity的PAP-001考古題將提供你, 一步步讓你靠近你的願望, 你有任何關於考試的考題及答案的問題, 我們將第一時間幫助你解決, 在一年之內, 我們將提供免費更新。

Ping Identity PAP-001 考試大綱:

主題	簡介
主題 1	<ul style="list-style-type: none">• Security: This section of the exam measures skills of Security Administrators and highlights how to manage certificates and certificate groups. It covers the association of certificates with virtual hosts or listeners and the use of administrator roles for authentication management.
主題 2	<ul style="list-style-type: none">• Installation and Initial Configuration: This section of the exam measures skills of System Engineers and reviews installation prerequisites, methods of installing or removing PingAccess, and securing configuration database passwords. It explains the role of run.properties entries and outlines how to set up a basic on-premise PingAccess cluster.
主題 3	<ul style="list-style-type: none">• General Maintenance and File System: This section of the exam measures the skills of System Engineers and addresses maintenance tasks such as license management, backups, configuration imports or exports, auditing, and product upgrades. It also includes the purpose of log files and an overview of the PingAccess file system structure with important configuration files.
主題 4	<ul style="list-style-type: none">• General Configuration: This section of the exam measures skills of Security Administrators and introduces the different object types within PingAccess such as applications, virtual hosts, and web sessions. It explains managing application resource properties, creating web sessions, configuring identity mappings, and navigating the administrative console effectively.
主題 5	<ul style="list-style-type: none">• Product Overview: This section of the exam measures skills of Security Administrators and focuses on understanding PingAccess features, functionality, and its primary use cases. It also covers how PingAccess integrates with other Ping products to support secure access management solutions.

PAP-001考試資料 & PAP-001熱門證照

世界500強企業中, 有超過2/3的企業選擇了 Ping Identity 電子商務軟體產品作為其核心的運用。因此, 獲得 Ping

Identity 的認證，即使在強手林立的競爭環境中，你同樣能夠脫穎而出。考生想要通過 PAP-001 考試，最快速的方式是使用 Ping Identity 的 PAP-001 考題，很多考生都是通過這種方式成功通過考試，可以快速掌握考試的相關資訊。

最新的 Ping Identity PingAccess PAP-001 免費考試真題 (Q69-Q74):

問題 #69

The application team is requesting step-up authentication only for a few specific resources while maintaining previous authentication for other resources. What change would the administrator need to make?

- A. Use context root as reserved resource base path
- B. Change the Context Root
- C. Manual Resource Ordering
- **D. Authentication Challenge Policy**

答案: D

解題說明:

To enforce step-up authentication for selected resources, PingAccess uses Authentication Challenge Policies. These policies allow different challenge methods to be applied depending on the resource.

Exact Extract:

"Authentication challenge policies define how PingAccess challenges users for authentication and are often applied when step-up authentication is required for specific resources."

* Option A (Authentication Challenge Policy) is correct - it ensures only certain resources trigger step-up MFA.

* Option B is incorrect; the reserved resource base path is unrelated to authentication.

* Option C is incorrect; changing the context root just changes the URL path prefix.

* Option D is incorrect; manual ordering of resources is unrelated to enforcing MFA.

Reference: PingAccess Administration Guide - Authentication Challenge Policies

問題 #70

Where should an administrator adjust SameSite Cookie settings?

- A. Applications
- **B. Web Sessions**
- C. Rules
- D. Sites

答案: B

解題說明:

The SameSite attribute is applied to session cookies to control cross-site behavior. In PingAccess, session cookie configuration (including SameSite) is defined at the Web Session level.

Exact Extract:

"Web session configuration includes cookie attributes such as name, domain, secure flag, HTTPOnly, and SameSite."

* Option A (Rules) is incorrect - rules govern access control, not cookies.

* Option B (Sites) defines backend connections, not session cookies.

* Option C (Applications) ties resources to sessions but does not define cookie behavior.

* Option D (Web Sessions) is correct - session cookie SameSite settings are configured here.

Reference: PingAccess Administration Guide - Web Session Cookies

問題 #71

For a Web Application, the id_token must be transmitted through a back channel with the OIDC standards-based approach. Which action should the administrator perform in the Web Session to meet this requirement?

- A. Set the request preservation to None
- B. Set the login type to POST
- C. Set the request preservation to POST
- **D. Set the login type to code**

答案： D

解題說明：

To transmit theid_token via a back channel according to OIDC best practices, the application must use the Authorization Code Flow(login type =code). This ensures tokens are retrieved securely via the back channel instead of being exposed in the browser.
Exact Extract:

"For back-channel transmission of ID tokens, configure the OIDC login type as Authorization Code."

- * Option A is correct - setting login type to code ensures back-channel delivery.
- * Option B is incorrect - request preservation concerns request method persistence, not OIDC flow.
- * Option C is incorrect - POST is not a valid login type; only Code, Implicit, or Hybrid.
- * Option D is incorrect - request preservation has no bearing on token delivery.

Reference: PingAccess Administration Guide -Configuring OIDC Web Sessions

問題 #72

An organization wants to take advantage of a new product feature that requires upgrading the PingAccess cluster from 7.3 to the current version. The administrator downloads the required files and places the files on the PingAccess servers. What should the administrator do next?

- A. Upgrade the Replica Admin.
- B. Disable Key Rolling.
- C. Disable cluster communication.
- D. Upgrade the Admin Console.

答案： D

問題 #73

An application owner would like customized errors for rule violations within an application. Where is this configured?

- A. Within the Rule definition
- B. Within the Root Resource of the Application
- C. When combining Rules into Rule Sets
- D. When assigning a Rule to a Resource

答案： B

解題說明：

PingAccess allows administrators to configure custom error pages or messages at the Root Resource level of an application. This ensures that when rule violations (e.g., authorization failures) occur, the application can display tailored error responses.

Exact Extract:

"Custom error handling for rule violations is configured within the Root Resource of an application."

- * Option A is incorrect - assigning a rule to a resource does not allow defining custom errors.
- * Option B is correct - the Root Resource is where administrators define custom error handling for the entire application.
- * Option C is incorrect - Rule Sets only combine rules; they do not handle error responses.
- * Option D is incorrect - individual rule definitions do not contain custom error configurations.
