PassTIP에서 발췌한 Appian인증 ACA-100덤프는 전문적인 IT인사들이 연구정리한 최신버전 Appian인증 ACA-100시험에 대비한 공부자료입니다. Appian인증 ACA-100 덤프에 있는 문제만 이해하고 공부하신다면 Appian인증 ACA-100시험을 한방에 패스하여 자격증을 쉽게 취득할 수 있을 것입니다.

거침없이 발전해나가는 IT업계에서 자신만의 자리를 동요하지 않고 단단히 지킬려면 Appian인증 ACA-100시험은 무조건 패스해야 합니다. 하지만 Appian인증 ACA-100시험패스는 하늘에 별따기 만큼 어렵습니다. 시험이 영어로 출제되어 공부자료 마련도 좀 힘든편입니다. 여러분들의 고민을 덜어드리기 위해 PassTIP에서는 Appian인증 ACA-100시험의 영어버전 실제문제를 연구하여 실제시험에 대비한 영어버전 Appian인증 ACA-100덤프를 출시하였습니다. 전문적인 시험대비자료이기에 다른 공부자료는 필요없이 PassTIP에서 제공해드리는 Appian인증 ACA-100영어버전덤프만 공부하시면 자격증을 딸수 있습니다.

>> Appian ACA-100퍼펙트 공부 <<

높은 통과율 ACA-100퍼펙트 공부 시험덤프로 시험패스가능

PassTIP는 여러분이 빠른 시일 내에 Appian ACA-100인증시험을 효과적으로 터득할 수 있는 사이트입니다. Appian ACA-100인증 자격증은 일상생활에 많은 개편을 가져올 수 있는 시험입니다. Appian ACA-100인증 자격증을 소지한 자들은 당연히 없는 자들보다 연봉이 더 높을 거고 승진기회도 많아지며 IT업계에서의 발전도 무궁무진합니다.

최신 Appian Certification Program ACA-100 무료샘플문제 (Q18-Q23):

질문 # 18

A case management tool needs intelligent and automated routing of many different complex case types, based on free text descriptions from external users.

What is the best way to implement this requirement?

- A. Build in a review task for a user to evaluate and route accordingly
- B. Use the find functions to search for certain keywords in the text body and route accordingly
- C. Integrate with a translation service to route accordingly
- **D. Integrate with a natural language processing system to categorize the user's needs and route accordingly**

정답: D

설명:

For intelligent and automated routing of complex case types based on free text descriptions, integrating with a Natural Language Processing (NLP) system is the most effective solution. NLP can analyze the free text, understand the context, and categorize the cases based on the content, enabling automated and accurate routing.

NLP System Integration Overview:

NLP systems can process and understand human language in text form, identifying key phrases, sentiments, and categories.

By integrating with an NLP service, Appian can automatically route cases to the appropriate department or user based on the analysis of the text provided by external users.

This approach reduces the need for manual review and ensures that cases are handled efficiently and accurately.

Why Not Other Options?:

A . Manual Review Task: This does not automate the process and relies on human intervention, which can be time-consuming and prone to error.

B . Find Functions for Keyword Search: This approach is limited to exact matches and lacks the sophistication needed to understand complex language and context.

C . Translation Service Integration: While useful for language translation, it does not offer the categorization and routing capabilities needed for this use case.

References:

Appian Documentation on NLP Integration: NLP in Appian

Integrating an NLP system with Appian ensures that complex cases are categorized and routed with high accuracy, improving the efficiency and effectiveness of case management.

질문 # 19

As an Appian Analyst, which activity are you responsible for during the "optimize" phase of a project?

- A. Build the deployment pipeline
- **B. Measure the impact of application release**
- C. Conduct release planning
- D. Structure an application support team

정답: B

설명:

During the "optimize" phase of an Appian project, the focus is on evaluating and improving the performance and impact of the application after its release. As an Appian Analyst, your role in this phase involves measuring the impact of the application release, which includes gathering and analyzing data on user adoption, performance metrics, and overall business impact. This data-driven approach helps in identifying areas for improvement and optimization to ensure the application continues to meet business objectives effectively. Appian Documentation - Application Lifecycle Management Note: The other options (A, B, C) are typically the responsibilities of other roles in different phases of the project, such as developers or project managers, and not specific to the "optimize" phase for an Appian Analyst.

질문 # 20

During the "initiate" phase, what are two key benefits of successful requirements gathering?

- A. Fewer test cases required
- **B. Adherence to the business stakeholders' goals**
- C. Better performance of the application
- **D. Less rework after the "test" phase**

정답: B,D

설명:

Adherence to the Business Stakeholders' Goals (A): Successful requirements gathering ensures that the application being developed aligns with the business objectives and stakeholders' expectations. This alignment is critical to delivering a product that meets the intended purpose and satisfies the needs of the organization. Appian Documentation - Requirements Gathering Best Practices Less Rework After the "Test" Phase (B): Thorough and accurate requirements gathering reduces the likelihood of discovering significant issues during the testing phase. When the requirements are well-defined and understood from the start, the development team is more likely to build the application correctly the first time, resulting in less rework after testing. Appian Documentation - Reducing Rework through Proper Planning Note: Fewer test cases required (C) and better performance of the application (D) are not direct benefits of successful requirements gathering. While better requirements can contribute to a more streamlined testing process and potentially better performance, these are not primary benefits.

질문 # 21

You are translating a user requirement into a user story and need to ensure that the desired functionality will be delivered as expected.

What needs to be written into the user story to ensure it will meet the requirement?

- A. Estimation of effort to develop
- B. Test Script
- C. Acceptance criteria
- D. Business value

정답: C

설명:

When translating a user requirement into a user story, it is essential to include acceptance criteria to ensure that the desired functionality will be delivered as expected. Acceptance criteria provide clear, testable conditions that define when a user story is complete and meets the requirement. This ensures that the development team has a clear understanding of what needs to be built and how it will be validated, reducing the risk of miscommunication and ensuring the final product aligns with the user's needs. Appian Documentation - Writing Effective User Stories Note: While business value (B) and estimation of effort (A) are important elements of a user story, they do not directly ensure that the functionality will meet the requirement. The test script (C) is typically created after the user story is developed.

질문 # 22

You are an Appian Analyst.

According to best practices, which other role should you work with to create process models as a part of requirements gathering?

- A. Product Owner
- B. Architect
- C. Scrum Master
- D. Product Manager

정답: A

설명:

As an Appian Analyst, collaborating with a Product Owner during the creation of process models is considered best practice. The Product Owner is responsible for defining the requirements and ensuring that the process models align with the business goals and needs. The Product Owner has a deep understanding of the product vision and user stories, which are crucial during the requirements gathering phase.

Role of Product Owner:

The Product Owner provides detailed requirements and prioritizes them based on business needs.

They ensure that the process models being developed accurately reflect the intended business processes and user stories.

Close collaboration with the Product Owner ensures that the process models are aligned with both the technical and business aspects of the project.

Why Not Other Options?:

A . Product Manager: Typically focuses on the overall product strategy and market alignment rather than detailed process modeling.

C . Architect: While architects provide valuable input on the system's design and architecture, they are not primarily responsible for requirements gathering.

D. Scrum Master: The Scrum Master facilitates the Agile process but does not directly contribute to defining or modeling business processes.
