

SAP C-S43-2601 Interactive Course & Cert C-S43-2601 Exam

If you have bought our C-S43-2601 exam braindumps, you will find that we have added new functions to add your exercises. The system of our C-S43-2601 guide materials will also be updated. In short, the new version of our C-S43-2601 training engine will change a lot. What is more, we will offer you free new version if you have purchased our C-S43-2601 training engine before. Since that we promise that you can enjoy free updates for one year after your purchase.

SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C_S43_2601) Exam Questions save your study time and help you prepare in less duration. We have hundreds of most probable questions which have a chance to appear in the real SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C_S43_2601) exam. The SAP C-S43-2601 exam questions are affordable and 365 days free updated, and you can use them without any guidance. However, in case of any trouble, our support team is always available to sort out the problems. We will provide you with the information covered in the current test and incorporate materials that originate from SAP C-S43-2601 Exam Dumps.

Cert C-S43-2601 Exam - Reliable C-S43-2601 Exam Syllabus

You may attend many certificate exams but you unfortunately always fail in or the certificates you get can't play the rules you want and help you a lot. So what certificate exam should you attend and what method should you use to let the certificate play its due role? You should choose the test C-S43-2601 Certification and buy our C-S43-2601 learning file to solve the problem. Passing the test C-S43-2601 certification can help you increase your wage and be promoted easily and buying our C-S43-2601 prep guide materials can help you pass the test smoothly.

SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C_S43_2601) Sample Questions (Q10-Q15):

NEW QUESTION # 10

Create a Maintenance Plan

The project team evaluates during the implementation project Maintenance Plans in SAP S/4HANA Asset Management. The following features need to be checked:

Create a Maintenance Plan

Create a Maintenance Plan and save it. Use the following information:

□

Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 8: Create a Maintenance Plan

The objective of this task is to create a strategy-based maintenance plan that will automatically generate work orders for your pump based on the frequencies defined in your task list.

Step 1: Access the Transaction

* Transaction Code : Enter IP42 in the command field and press Enter .

* Initial Screen :

* Maintenance Plan Category : Select Maintenance Order (or "Maintenance plan for Maintenance Order" if using the Fiori Launchpad).

* Maintenance Strategy : Enter Z48 .

* Press Enter .

Step 2: Enter Header and Maintenance Item Data

Once you are on the main creation screen, fill in the "Maintenance Item" section to define what is being maintained and how the orders should look:

* Description : Enter Regular pump maintenance Z48 .

* Equipment : Enter T-PA48 .

* Planning Plant : This should default to 1010 based on the equipment, but ensure it is correct.

* Order Type : Enter PM02 .

Explanation : By assigning Equipment T-PA48 and Order Type PM02 , you are telling SAP to generate a specific "Planned" maintenance order every time this schedule is triggered.

Step 3: Link the Task List

This step connects the plan to the specific maintenance steps (operations) you created in Task 7.

* Look for the Task List section at the bottom of the screen.

* Task List Type : Enter A (General Task List).

* Group : Enter TL-48 .

* Counter : Enter 1 .

* Press Enter to validate the connection. You should see the description "Regular Maintenance GR48" appear.

Explanation : Linking the Task List ensures that when the maintenance plan generates an order, it automatically copies the 30-minute operations you defined earlier into that order.

Step 4: Set Scheduling Parameters (Optional but Recommended)

While the table in your document focuses on the data above, typically you would click the Maintenance Plan Scheduling Parameters tab to ensure the "Scheduling Period" and "Start Date" are set. However, for the assessment, the mandatory data is what we entered in Steps 1-3.

Step 5: Save

* Click the Save (floppy disk) icon.

* Note your Maintenance Plan Number : The system will display a message at the bottom, such as

"Maintenance plan 123 saved." Write this number down , as you will need it for Task 9: Schedule a Maintenance Plan .

Task 8 is now complete! You have built the automated "brain" that will handle the recurring maintenance for your pump.

NEW QUESTION # 11

In the following assessment you will slip into the role of a consultant implementing SAP S/4HANA Asset Management OnPrem/Private Cloud for Machine Manufacturing Inc. . You need to fulfill various system tasks to setup certain business processes and test them.

Note:

In the task descriptions is no information provided if and/or how Asset Management specific customizing settings need to be adapted. This is an implicit part of the exam.

Note:

There is no information provided which UI to use when creating the data in the system e.g. SAP GUI, SAP Fiori Launchpad. This is an implicit part of the exam.

Your performance in each exercise will be evaluated to produce an overall score that determines a pass or fail for the exam. Please read every exercise carefully and enter any data exactly as requested without alteration. Some input data is provided in tables or in the task descriptions, however your input data is not limited to these parameters.

Use the following Logon information for all tasks:

Caution:

Please make sure you are always using your assigned group number (denoted as ## in the following) .

Your results will not be recorded if you are not using your own group number.

For example, if your group number is 10 i.e. (## = 10), your user will be S43900-10.

To find your group number: Click the Access button on the practice system details page. You will find your group number displayed beneath the "Get started" header in the pop-up window. Alternatively, in your Windows Terminal Server, choose the Windows button in the lower left corner. The Start Menu opens. In its upper left corner, choose the Expand icon (three white lines). Find your user name next to the user icon on the left side of the menu - the last two digits of the user name are your group number ##.

Note:

To access your backend system in the Windows Terminal Server, open the SAP Logon application and start the T41 system (Client 400). You can access the SAP Fiori Launchpad from the SAP Menu in T41. Always work with user S43900-## in order to have the required roles in place for your tasks.

Caution:

To keep the system running smoothly and avoid unnecessary costs, please follow the assigned exercises carefully when using the SAP Landscape. Avoid going beyond the exercise scope and stay within your allocated resources to help maintain a stable and efficient environment for everyone and to ensure your data is evaluated properly.

Note:

In the following, you will be asked to create new transaction data, among others. If you are asked to create one specific new transaction data object, and - for whatever reason - you create more than one of that kind, SAP will evaluate your newest version only. For example: if you are asked to create a Maintenance Order of a specific Order Type in an exercise and you create three different Maintenance Orders of a specific Order Type, only your order with the highest order number will be evaluated.

Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task Objective

In this assessment, you assume the role of a consultant implementing SAP S/4HANA Asset Management for Machine Manufacturing Inc. . Your goal is to set up and test specific business processes through various system tasks.

Step 1: Identify Your Assigned Group Number (##)

This is the most critical step, as your results will only be recorded if you use your specific group number, denoted as ## in all instructions.

How to find your number:

* Method A: Click the Access button on the practice system details page; your group number is displayed beneath the "Get started" header.

* Method B: In the Windows Terminal Server, click the Windows button (Start Menu), select the Expand icon (three white lines), and find your user name next to the user icon. The last two digits of that name are your group number.

Step 2: Access the System

You must use the specific credentials provided to ensure you have the required roles for the assessment.

Logon Credentials:

* System : T41

* Client : 400

* User Name/ID : S43900-## (e.g., if your group number is 10, use S43900-10)

* Password : Welcome1

Connection Methods:

* SAP GUI : Open the SAP Logon application in the Windows Terminal Server and start the T41 system (Client 400).

* SAP Fiori Launchpad : This can be accessed directly from the SAP Menu within the T41 system.

Step 3: Understand Implicit Exam Rules

The assessment does not provide exhaustive instructions; certain technical decisions are considered part of the exam.

* Customizing : You must determine if and how specific Asset Management customizing settings need to be adapted.

* User Interface : You are free to choose between the SAP GUI or SAP Fiori Launchpad to create data, as the instructions do not specify which to use.

* Data Accuracy : Enter all data exactly as requested in the tables or descriptions without any alterations.

Step 4: Evaluation of Transaction Data

If you are asked to create a specific transaction object (like a Maintenance Order) and you create multiple versions, the system will only evaluate the newest version (the one with the highest identifying number).

Caution : To ensure your data is evaluated properly and to maintain system stability, stay strictly within the scope of the assigned exercises and your allocated resources.

□

NEW QUESTION # 12

Use Phase-Based Maintenance Processing

The project team evaluates during the implementation project Phase-Based Maintenance Processing in SAP S/4HANA Asset Management. The following features need to be checked:

* Initiate and screen a Maintenance Notification

* Plan Maintenance Order and send it for approval

* Create a Maintenance Notification using an already available notification type which is suitable for phase-based maintenance and

save it.

Use the following data:

- * Screen and accept the just created Maintenance Notification.
 - * Create an Order (Phase-based) for your accepted notification and submit it for approval.
- Use the following data:

Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 10 Overview

This task evaluates your ability to manage the newer, phase-led maintenance workflow in SAP S/4HANA.

Unlike the traditional "emergency" repair you did earlier, this process includes formal screening and approval steps Step 1: Create a Phase-Based Maintenance Notification In this step, you initiate the request.

- * Access the Transaction : Use transaction IW21 or the Fiori app Create Maintenance Request .
- * Select Notification Type : Use a type configured for phase-based maintenance (typically Y1 - Maintenance Request).
- * Enter the Following Data :
- * Technical Object : T-PB48
- * Description : Defective pump (phase-based)
- * Current Location : Production Line 1
- * Detection Method : Continuous Condition Monitoring
- * Operational Effect : Production restricted
- * Save : Note the notification number generated.

Explanation : This step "initiates" the maintenance process. In phase-based maintenance, the notification starts in the Initiation phase, where it must be reviewed before any work is planned.

Step 2: Screen and Accept the Notification

As a "Maintenance Coordinator," you must now review the request.

- * Access the Fiori App : Open Screen Maintenance Requests .
- * Locate Your Notification : Find the notification you just created for T-PB48.
- * Perform Screening :
- * Review the details to ensure they are complete.
- * Click Accept to move it to the next phase.

Explanation : "Screening" is a quality gate. It ensures that the maintenance team only spends time planning valid, well-described issues. Once accepted, the notification moves from the Initiation phase to the Screening phase and finally becomes available for planning

Step 3: Create and Plan the Phase-Based Order

Now you will create the formal work order for the accepted request.

- * Create Order : From within the accepted notification, or using the Manage Maintenance Backlog app, choose to Create Order .
- * Enter Planning Data :
- * Technical Object : T-PB48
- * Operation 0010 Description : Repair damage
- * Operation 0010 Work : 2 h
- * Submit for Approval : Look for the Submit for Approval button at the top of the order screen.

Explanation : This step moves the order into the Planning phase. By submitting it for approval, you are requesting the budget and resources to perform the work. The order status will change to indicate it is "Waiting for Approval"

NEW QUESTION # 13

Task 4: Configure and create Technical Objects

The project team evaluates during the implementation project Technical Object structures in SAP S/4HANA Asset Management.

The following features need to be checked:

- * Configure and create Functional Locations
- * Create, serialize and install Equipment
- * Create Functional Location master record ZZ0##-01 and save it. Use the following information:
 - * Create Equipment master record EQUI-## and save it. Use the following information:
 - * Serialize the just created Equipment master record EQUI-## . Use the following data:
 - * Install Equipment EQUI-## at the Functional Location 00-01-ASS-02 .

Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 4: Configure and create Technical Objects

This task evaluates your ability to structure and manage the physical and functional hierarchy of assets in SAP S/4HANA Asset Management.

Step 1: Create Functional Location Master Record

A Functional Location represents the area at which a maintenance task is to be performed.

* Access the Transaction : Use transaction code IL01 (Create Functional Location).

* Enter Initial Data :

* Functional Location : ZZ048-01.

* Structure Indicator : ZZ48.

* Functional Location Category : T.

* Press Enter .

□ * Enter General Data :

* Description : Production Line Z48.

* Enter Location and Organization Data :

* Maintenance Plant : 1020.

* Cost Center : 4110.

* Planning Plant : 1020.

* Planner Group : Z48.

* Main WorkCtr : T-ME48.

* Work Center Plant : 1010.

* Save : Click the Save icon.

Explanation : By creating this record, you define a specific functional area within Plant 1020 where maintenance costs and history will be tracked for all equipment installed there.

□ Step 2: Create Equipment Master Record

Equipment represents an individual physical object that is maintained as an autonomous unit.

* Access the Transaction : Use transaction code IE01 (Create Equipment).

* Enter Initial Data :

* Equipment : EQUI-48.

* Equipment Category : T.

* Press Enter .

□ * Enter General Data :

* Description : Drive Motor GR48.

* Save : Click the Save icon.

Explanation : This step creates a master record for a physical asset-a drive motor-allowing you to track its individual lifecycle, independent of where it is currently installed.

□ Step 3: Serialize the Equipment

Serialization links a piece of equipment to a specific material and unique serial number for inventory management and tracking.

* Access the Transaction : Use transaction code IE02 (Change Equipment) and enter EQUI-48.

* Navigate to Serial Data : Go to the SerData (Serial Data) tab.

* Enter Serialization Data :

* Material : T-PM8000.

* Serial Number : EQUI-48.

* Save : Click the Save icon.

Explanation : Linking the motor to Material T-PM8000 enables the system to track this specific asset as a serialized part, which is essential for warehouse movements and warranty tracking.

□ Step 4: Install Equipment at a Functional Location

This establishes the relationship between the physical asset (Equipment) and the functional area where it is operating.

* Access the Transaction : Use transaction code IE02 (Change Equipment) for EQUI-48.

* Modify Installation Location :

* Click on the Structure tab.

* Find the FunctLoc field.

* Enter the location: 00-01-ASS-02.

* Save : Click the Save icon.

Explanation : This installation "plugs" your drive motor into the functional hierarchy at location 00-01-ASS-02. From this point forward, any maintenance performed on this motor will be automatically associated with that location's history.

NEW QUESTION # 14

Task 6: Configure Maintenance Order Types and work with Maintenance Orders The project team evaluates during the implementation project Maintenance Orders in SAP S/4HANA Asset Management. The following features need to be checked:

- * Configure a Maintenance Order Type and create a Maintenance Order
- * Create a Time Confirmation a Maintenance Order
- * Prepare a Maintenance Order for Completion
- * Create a Maintenance Order and save it.

Note:

Make sure that you have maintained all required customizing settings for the Maintenance Order Type.

Use the following information at header level:

- Plan a Maintenance Order Operation and use the following information:
 - Create a Time Confirmation for the just created Maintenance Order. Use the following information:
 - * Display the Actual Costs assigned to the just created Maintenance Order and set it to Technically Completed. Display the Settlement Rule.

Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 6 Overview

The goal of this task is to process a repair from start to finish. You will convert the "leaking pump" notification into a work order, plan the labor, record the work performed, and technically close the file.

Step 1: Create the Maintenance Order from Notification

Instead of starting from scratch, we link the order to the notification you created in Task 5.

- * Access the Transaction : Use transaction code IW31 .
- * Initial Screen :
- * Order Type : PM01.
- * Notification : Enter your notification number (e.g., 10000147).
- * Press Enter .
- * Header Data :
- * The description "Pump is leaking" should pull in automatically.
- * Main Work Center : Ensure it is T-ME48.

Explanation : By entering the notification number, SAP automatically pulls in the equipment, functional location, and problem description, ensuring "data integrity" across the maintenance process.

Step 2: Plan the Operations (Labor)

You must tell the system how much effort the repair requires.

- * Go to the Operations Tab .
- * Enter Planning Data :
- * Work : 2.
- * Unit (Un) : H (Hours).
- * Number : 1 (One person).
- * Duration (Dur.) : 2 / Unit : H.
- * Add Enhancement Data :
- * Click the Additional Data tab - > Enhancement sub-tab.
- * In the Field Key box, use the search (F4) to select 0000001 (User-defined fields).
- * In the first text box (Text 1), type: Industrial Z48.

Explanation : Planning the work allows the system to calculate the estimated cost of the repair. The "Enhancement" data is used to store specific technical details (like the motor type) that aren't in the standard SAP fields.

Step 3: Release the Order

An order in "Created" (CRTD) status is just a plan. To start work, it must be "Released" (REL).

- * Release : Look at the top toolbar and click the Green Flag icon .
- * Verify Status : The "Sys.Status" field should now include REL.
- * Save : Click the Save (floppy disk) icon.

Explanation : Releasing the order is the "Green Light" for the shop floor. It allows technicians to charge time to the job and warehouse staff to issue parts.

Step 4: Time Confirmation (Recording the Work)

Now we record that the repair is physically finished.

- * Access the Transaction : Use transaction code IW41 .
- * Enter Data :
- * Order : Enter your order number (e.g., 4000395).
- * Actual Work : 2 H.
- * Check the boxes for Final Confirmation and No Remaining Work .
- * Confirmation Text : Pump repaired and tested.
- * Save : Click the Save icon.

Explanation : This step captures the "Actual Cost." SAP multiplies the 2 hours of labor by the hourly rate of work center T-ME48 to calculate exactly how much this repair cost the company.

Step 5: Technical Completion (TECO)

The final administrative step to close the repair file.

- * Access the Transaction : Use transaction code IW32 .
- * Complete Technically :
- * Go to menu: Order > Functions > Complete > Complete (technically) .
- * Click the Green Checkmark on the popup window.
- * Save : Click the Save icon.

Explanation : TECO (Technical Completion) locks the order. It tells the system the asset is back in service and prevents any further labor or parts from being charged to this specific job.

NEW QUESTION # 15

.....

Obtaining a C-S43-2601 certificate can prove your ability so that you can enhance your market value. When you want to correct the answer after you finish learning, the correct answer for our C-S43-2601 test prep is below each question, and you can correct it based on the answer. In addition, we design small buttons, which can also show or hide the C-S43-2601 Exam Torrent, and you can flexibly and freely choose these two modes according to your habit. In short, you will find the convenience and practicality of our C-S43-2601 quiz guide in the process of learning. We will also continue to innovate and improve functions to provide you with better services.
