* Analytical Query: Designed for analytical use cases with annotations like @Analytics.query: true to allow exposure to Fiori Analytical apps.
* Hierarchy: Used for defining and consuming hierarchical data in CDS. These can be displayed in Fiori Tree tables and analytical contexts.
The following options are incorrect:
* Transactional Interface and Transactional Query are not standard view types or part of the CDS view hierarchy used in the consumption layer. These terms may have been incorrectly stated and do not reflect supported CDS artifacts.
