

Practice NSE5_FNC_AD-7.6 Test Online | NSE5_FNC_AD-7.6 Prep Guide

Why we let you try our NSE5_FNC_AD-7.6 exam software free demo before you purchase? Why we can give you a promise that we will fully refund the money you purchased our software if you fail NSE5_FNC_AD-7.6 Exam with our dump? Because we believe that our products can make you success. As the NSE5_FNC_AD-7.6 exam continues to update, our software will be always updating with it.

Fortinet NSE5_FNC_AD-7.6 certificate can help you a lot. It can help you improve your job and living standard, and having it can give you a great sum of wealth. Fortinet certification NSE5_FNC_AD-7.6 exam is a test of the level of knowledge of IT professionals. ValidExam has developed the best and the most accurate training materials about Fortinet Certification NSE5_FNC_AD-7.6 Exam. Now ValidExam can provide you the most comprehensive training materials about Fortinet NSE5_FNC_AD-7.6 exam, including exam practice questions and answers.

NSE5_FNC_AD-7.6 Prep Guide, Questions NSE5_FNC_AD-7.6 Exam

There may be a lot of people feel that the preparation process for exams is hard and boring, and hard work does not necessarily mean good results, which is an important reason why many people are afraid of examinations. Today, our NSE5_FNC_AD-7.6 study materials will radically change this. High question hit rate makes you no longer aimless when preparing for the exam, so you just should review according to the content of our NSE5_FNC_AD-7.6 Study Materials prepared for you. Instant answer feedback allows you to identify your vulnerabilities in a timely manner, so as to make up for your weaknesses.

Fortinet NSE 5 - FortiNAC-F 7.6 Administrator Sample Questions (Q64-Q69):

NEW QUESTION # 64

Refer to the output below.

```
INFO yams.CampusManager - masterLoaderPID = 2754377 nexusLoaderPID = 2754336
INFO yams.CampusManager - sendToNetwork verb Start Processes standbyenabled true inControl true controlServer true
INFO yams.CampusManager - Skip sending verb to 192.168.10.10 because local ip is 192.168.10.10
INFO yams.CampusManager - sendPacket() 192.168.10.10 verb Start Processes retval = null
[grpc-default-executor-3560] INFO yams.CampusManager - CampusManagerCheckOK system true, in control true, final true
INFO yams.CampusManager - sendPacket() 192.168.10.110 verb Start Processes retval = Running - Not In Control
```

Examine the communication between a primary FortiNAC-F (192.168.10.10) and a secondary FortiNAC-F (192.168.10.110) configured as a 1+1 HA pair.

What is the current state of the FortiNAC-F HA pair?

- A. The database replication failed.
- B. The secondary server is running and in control.
- C. Failover from the primary server to the secondary server is in progress.
- **D. The primary server is running and in control.**

Answer: D

The primary server (192.168.10.10) reports inControl true, while the secondary server (192.168.10.110) is Running - Not In Control, indicating the primary is active and controlling the HA pair.

Refer to the exhibit. What will happen to the host of a guest user created from this template if the time of connection is 8:00 PM?

- A. The host will be marked as non-authenticated.
- B. The host will be marked as a rogue device.
- C. The host will be marked as at-risk.
- D. The host will be administratively disabled.

Explanation:

In FortiNAC-F, the Guest & Contractor Template is a configuration object that defines the parameters for accounts created by sponsors or through self-registration. One of the critical security controls within this template is the Login Availability setting. This setting restricts the specific days and times during which a guest or contractor is permitted to authenticate and access the network. As shown in the exhibit, the "StandardGuest" template has Login Availability set to "Specify Time", with a schedule defined as Mon-Fri, 6:00 AM to 7:00 PM. If a guest user attempts to connect or authenticate at 8:00 PM, which is outside of the permitted window, FortiNAC-F's policy engine will automatically deny the authentication request. When an authentication attempt is denied due to schedule restrictions, the system does not move the host into the "Authenticated" or "Registered" state required for production access. Instead, the host is marked as non-authenticated in the adapter or host view.

Refer to the exhibit.

Which devices are automatically evaluated by these device profiling rules?

- A. Rogue devices, only when they are initially added to the database
- B. Known trusted devices, each time they connect

- C. All hosts, each time they connect
- D. Rogue devices, each time they change location

Answer: A

Explanation:

The profiling rules are configured with automatic registration and rely on vendor OUI and location methods. These rules evaluate devices when they are first identified as rogues and added to the database, at which point profiling determines whether they should be registered as devices.

NEW QUESTION # 67

A user was attempting to register their host through the registration captive portal. After successfully registering, the host remained in the registration VLAN. Which two conditions would cause this behavior? (Choose two.)

- A. There is no agent installed on the host.
- B. The port default VLAN is the same as the Registration VLAN.
- C. The wrong agent s installed.
- D. There is another unregistered host on the same port

Answer: B,D

Explanation:

The process of moving a host from a Registration VLAN to a Production VLAN (Access VLAN) is a fundamental part of the FortiNAC-F "VLAN steering" workflow. When a host successfully registers via the captive portal, FortiNAC-F evaluates its Network Access Policies to determine the correct VLAN. If the host remains stuck in the Registration VLAN despite a successful registration, it is typically due to port-level restrictions or the presence of other unregistered devices.

The two most common reasons for this behavior as per the documentation are:

The port default VLAN is the same as the Registration VLAN: If the "Default VLAN" field in the switch port's model configuration is set to the same ID as the Registration VLAN, the port will not change state because FortiNAC-F believes it is already in its "normal" or "forced" state.

There is another unregistered host on the same port: FortiNAC-F maintains the security posture of the physical port. If multiple hosts are connected to a single port (e.g., via a hub or unmanaged switch) and at least one host remains "Rogue" (unregistered), FortiNAC-F will generally keep the entire port in the isolation/registration VLAN to prevent the unregistered host from gaining unauthorized access to the production network.

NEW QUESTION # 68

Refer to the exhibit.

Network Access Policy configuration wizard

Create Network Access Policy

Name: Guests

Notes:

Configuration: Guest-VLAN

Enabled: ☒

User/Host Profile: Guests

Conditions

Use Existing Clone

Name: Guests

Who/What: ☒

Attributes (Satisfy Any of the Following)

Where: Host Security Access Value Guest

OR

Where: User Security Access Value Guest

RADIUS Attributes (Satisfy Any of the Following)

Groups: Any Any Of All Of None Of

Where: ☒ Any

When: Always

Notes:

When configuring guest access using a network access policy, where would an administrator configure the Guest-VLAN value?

- A. In the Model configuration
- B. In the Guest portal configuration
- C. In the Guest template
- D. In the User/Host profile

Answer: A

Explanation:

The Guest-VLAN value is defined within the switch Model configuration, where VLAN mappings and enforcement actions are configured. The network access policy references this configuration to apply the appropriate VLAN when the policy conditions are met.

NEW QUESTION # 69

.....

Many clients may worry that their privacy information will be disclosed while purchasing our NSE5_FNC_AD-7.6 quiz torrent. We promise to you that our system has set vigorous privacy information protection procedures and measures and we won't sell your privacy information. Before you buy our product, you can download and try out it freely so you can have a good understanding of our NSE5_FNC_AD-7.6 Quiz prep. Please feel safe to purchase our NSE5_FNC_AD-7.6 exam torrent any time as you like. We provide the best service to the client and hope the client can be satisfied.

NSE5_FNC_AD-7.6 Prep Guide: https://www.validexam.com/NSE5_FNC_AD-7.6-latest-dumps.html

Fortinet Practice NSE5_FNC_AD-7.6 Test Online All contents are passing rigid inspection, Fortinet Practice NSE5_FNC_AD-7.6 Test Online GREAT SELF-ASSESSMENT WITH OUR GUARANTEED RESULTS, Fortinet Practice NSE5_FNC_AD-7.6 Test Online We try our best to improve ourselves to satisfy all customers' demands, Fortinet Practice NSE5_FNC_AD-7.6 Test Online As you know, when choosing a learning product, what we should value most is its content, Fortinet Practice NSE5_FNC_AD-7.6 Test Online We firmly believe that you cannot be an exception.

Providing flexibility in the order in which one can cover topics, The caller NSE5_FNC_AD-7.6 is notified of some problem and then prompted to enter information such as credit card numbers, social security numbers, or other information.

All contents are passing rigid inspection, GREAT SELF-ASSESSMENT NSE5_FNC_AD-7.6 Valid Dumps Demo WITH OUR GUARANTEED RESULTS, We try our best to improve ourselves to satisfy all customers' demands.
