## Valid DA0-002 Exam Notes | Exam DA0-002 Sample

Customizable CompTIA Data+ Exam (2025) (DA0-002) practice exams allow you to adjust the time and CompTIA DA0-002 questions numbers according to your practice needs. Scenarios of our DA0-002 Practice Tests are similar to the actual DA0-002 exam. You feel like sitting in the real DA0-002 exam while taking these DA0-002 practice exams.

## CompTIA Data+ Exam (2025) Sample Questions (Q51-Q56):

### NEW QUESTION # 51

Which of the following is found in metadata?

- A. Data lineage
- B. Syntax
- C. Transformations
- D. Variable types

**Answer: D**

Explanation:

This question pertains to the Data Concepts and Environments domain, focusing on the content of metadata. Metadata describes data attributes, and the task is to identify what it typically includes.

\* Transformations (Option A): Transformations (e.g., data cleaning steps) are part of data lineage, not metadata.

\* Data lineage (Option B): Data lineage tracks data flow and transformations, which is related to metadata but not a direct component.

\* Syntax (Option C): Syntax refers to code structure, not a metadata component.

\* Variable types (Option D): Metadata includes information about data fields, such as variable types (e.

g., integer, string), which is a standard component.

The DA0-002 Data Concepts and Environments domain includes understanding "data schemas and dimensions," and metadata typically contains details like variable types to describe the dataset.

Reference: CompTIA Data+ DA0-002 Draft Exam Objectives, Domain 1.0 Data Concepts and Environments.

### NEW QUESTION # 52

A manager needs a report to be sent by email every Monday for the next six months. Which of the following is the best way to accomplish this task?

- A. Developing a recurring process
- B. Waiting for the request each week
- C. Building self-service access
- D. Creating a data snapshot

#### Answer: A

Explanation:

This question falls under the Visualization and Reporting domain, focusing on report delivery methods. The task requires a report to be emailed every Monday for six months, indicating a scheduled, repeating process.

\* Building self-service access (Option A): Self-service allows users to generate reports on-demand, but the manager wants automatic delivery.

\* Creating a data snapshot (Option B): A snapshot captures data at a specific point, not suitable for recurring delivery over six months.

\* Developing a recurring process (Option C): A recurring process schedules the report to be generated and emailed every Monday, meeting the requirement for automated delivery over six months.

\* Waiting for the request each week (Option D): This is manual and inefficient, not suitable for a six- month schedule.

The DA0-002 Visualization and Reporting domain includes "the appropriate visualization in the form of a report" with delivery methods, and a recurring process is ideal for scheduled email delivery.

Reference: CompTIA Data+ DA0-002 Draft Exam Objectives, Domain 4.0 Visualization and Reporting.

### NEW QUESTION # 53

An administrator needs to design a table that will include foreign words. Which of the following is the best option for storing non-native language characters?

- A. VARCHAR
- B. CLOB
- C. CHAR
- D. NVARCHAR

#### Answer: D

Explanation:

This question falls under the Data Concepts and Environments domain, focusing on selecting appropriate data types for storing specific kinds of data. The task requires storing foreign words, which often include non-native characters (e.g., accents, Unicode characters).

\* VARCHAR (Option A): VARCHAR stores variable-length strings but typically uses ASCII or single- byte encoding, which may not support all foreign characters.

\* NVARCHAR (Option B): NVARCHAR (National VARCHAR) stores variable-length strings in Unicode, supporting a wide range of non-native characters, making it the best choice.

\* CLOB (Option C): CLOB (Character Large Object) is for large text data, but it's overkill for most foreign words and not specifically designed for Unicode.

\* CHAR (Option D): CHAR stores fixed-length strings, but like VARCHAR, it often uses single-byte encoding, which may not support foreign characters.

The DA0-002 Data Concepts and Environments domain includes understanding "data schemas and dimensions," such as selecting data types like NVARCHAR for Unicode support.

Reference: CompTIA Data+ DA0-002 Draft Exam Objectives, Domain 1.0 Data Concepts and Environments.

#### NEW QUESTION # 54

A data analyst is creating a report about cars sold within the last twelve months. The current data set only contains information from the last ten months. Which of the following is the most appropriate way to accomplish this task?

- A. Join the records from the last two months of the previous year and append them to the data table.
- B. Parse the records from the last two months of the previous year and append them to the data table.
- C. Merge the records from the last two months of the previous year and append them to the data table.
- D. Extract the records from the last two months of the previous year and append them to the data table.

**Answer: D**

#### NEW QUESTION # 55

A developer builds an online survey that requires all questions to have an answer. Which of the following inconsistencies does this setting prevent?

- A. Missing values
- B. Duplication
- C. Completeness
- D. Data corruption

**Answer: A**

Explanation:

This question pertains to the Data Governance domain, focusing on data quality and consistency in survey design. Requiring all questions to have an answer ensures a specific type of data quality.

\* Missing values (Option A): Requiring answers prevents missing values (NULLs or blanks) in the survey responses, which is the primary inconsistency this setting addresses.

\* Duplication (Option B): Duplication refers to repeated records, not prevented by requiring answers.

\* Data corruption (Option C): Data corruption involves damaged or altered data, not related to missing answers.

\* Completeness (Option D): Completeness is the concept of having all necessary data, but "missing values" is the specific inconsistency prevented here.

The DA0-002 Data Governance domain includes "data quality control concepts," and preventing missing values ensures data integrity in survey responses.

Reference: CompTIA Data+ DA0-002 Draft Exam Objectives, Domain 5.0 Data Governance.

#### NEW QUESTION # 56
