

# ANS-C01 Free Brain Dumps | New ANS-C01 Exam Questions

BONUS!!! Download part of ValidTorrent ANS-C01 dumps for free: [https://drive.google.com/open?id=1pWU2JvT4Wi8WVl\\_2YbdkbaoHgiEV-JhJ](https://drive.google.com/open?id=1pWU2JvT4Wi8WVl_2YbdkbaoHgiEV-JhJ)

Our AWS Certified Advanced Networking Specialty Exam exam question can make you stand out in the competition. Why is that? The answer is that you get the ANS-C01 certificate. What certificate? Certificates are certifying that you have passed various qualifying examinations. Watch carefully you will find that more and more people are willing to invest time and energy on the ANS-C01 Exam, because the exam is not achieved overnight, so many people are trying to find a suitable way. Fortunately, you have found our ANS-C01 real exam materials, which is best for you.

Obtaining the ANS-C01 Certification demonstrates that an IT professional has a high level of expertise in networking on the AWS platform. AWS Certified Advanced Networking Specialty Exam certification is recognized by employers and provides a competitive advantage in the job market. Additionally, it validates an individual's skills in designing and implementing secure and scalable networking solutions on AWS, which is essential for businesses that operate in the cloud.

Amazon ANS-C01 (AWS Certified Advanced Networking Specialty) exam is specifically designed for professionals who have a deep understanding of networking concepts and are looking to validate their knowledge and skills in the AWS environment. AWS Certified Advanced Networking Specialty Exam certification is intended for individuals who have already passed the AWS Certified Solutions Architect – Associate or AWS Certified Developer – Associate exams and are looking to further their knowledge in networking in the AWS cloud.

## 2026 Marvelous ANS-C01 Free Brain Dumps Help You Pass ANS-C01 Easily

No doubt the Amazon ANS-C01 certification is a valuable credential that helps you to put your career on the right track and assist you to achieve your professional career goals. To achieve this goal you need to pass the AWS Certified Advanced Networking Specialty Exam (ANS-C01) exam. To pass the AWS Certified Advanced Networking Specialty Exam (ANS-C01) exam you need to start this journey with valid, updated, and real Amazon ANS-C01 PDF QUESTIONS. The ValidTorrent ANS-C01 exam practice test questions are essential study material for quick Amazon ANS-C01 exam preparation.

To achieve ANS-C01 Certification, candidates must pass a rigorous exam that includes both multiple-choice and hands-on questions. ANS-C01 exam is designed to test the candidate's knowledge and skills in real-world scenarios, so it requires a practical understanding of networking principles and AWS services. Candidates must also demonstrate their ability to troubleshoot and optimize network performance.

## Amazon AWS Certified Advanced Networking Specialty Exam Sample Questions (Q12-Q17):

### NEW QUESTION # 12

A government contractor is designing a multi-account environment with multiple VPCs for a customer. A network security policy requires all traffic between any two VPCs to be transparently inspected by a third-party appliance.

The customer wants a solution that features AWS Transit Gateway. The setup must be highly available across multiple Availability Zones, and the solution needs to support automated failover.

Furthermore, asymmetric routing is not supported by the inspection appliances. Which combination of steps is part of a solution that meets these requirements? (Choose two.)

- A. Configure two route tables on the transit gateway. Associate one route table with all the attachments of the application VPCs. Associate the other route table with the inspection VPC's attachment. Propagate all VPC attachments into the inspection route table. Define a static default route in the application route table. Enable appliance mode on the attachment that connects the inspection VPC.
- B. Deploy two clusters that consist of multiple appliances across multiple Availability Zones in a designated inspection VPC. Connect the inspection VPC to the transit gateway by using a VPC attachment. Create a target group, and register the appliances with the target group. Create a Gateway Load Balancer, and set it up to forward to the newly created target group. Configure a default route in the inspection VPC's transit gateway subnet toward the Gateway Load Balancer endpoint.
- C. Configure two route tables on the transit gateway. Associate one route table with all the attachments of the application VPCs. Associate the other route table with the inspection VPC's attachment. Propagate all VPC attachments into the application route table. Define a static default route in the inspection route table. Enable appliance mode on the attachment that connects the inspection VPC.
- D. Deploy two clusters that consist of multiple appliances across multiple Availability Zones in a designated inspection VPC. Connect the inspection VPC to the transit gateway by using a VPC attachment. Create a target group, and register the appliances with the target group. Create a Network Load Balancer (NLB), and set it up to forward to the newly created target group. Configure a default route in the inspection VPC's transit gateway subnet toward the NLB.
- E. Configure one route table on the transit gateway. Associate the route table with all the VPCs. Propagate all VPC attachments into the route table. Define a static default route in the route table.

**Answer: A,B**

Explanation:

<https://docs.aws.amazon.com/elasticloadbalancing/latest/gateway/introduction.html>

### NEW QUESTION # 13

A global company operates all its non-production environments out of three AWS Regions: eu-west-1, us-east-1, and us-west-1. The company hosts all its production workloads in two on-premises data centers. The company has 60 AWS accounts and each account has two VPCs in each Region. Each VPC has a virtual private gateway where two VPN connections terminate for resilient connectivity to the data centers. The company has 360 VPN tunnels to each data center, resulting in high management overhead. The total VPN throughput for each Region is 500 Mbps.

The company wants to migrate the production environments to AWS. The company needs a solution that will simplify the network architecture and allow for future growth. The production environments will generate an additional 2 Gbps of traffic per Region back to the data centers. This traffic will increase over time.

Which solution will meet these requirements?

- A. Set up an AWS Direct Connect connection from each data center to AWS in each Region. Create and attach private VIFs to a single Direct Connect gateway. Attach the Direct Connect gateway to all the VPCs. Remove the existing VPN connections that are attached directly to the virtual private gateways.
- B. Create a single transit gateway with VPN connections from each data center. Share the transit gateway with each account by using AWS Resource Access Manager (AWS RAM). Attach the transit gateway to each VPC. Remove the existing VPN

connections that are attached directly to the virtual private gateways.

- C. Peer all the VPCs in each Region to a new VPC in each Region that will function as a centralized transit VPC. Create new VPN connections from each data center to the transit VPCs. Terminate the original VPN connections that are attached to all the original VPCs. Retain the new VPN connection to the new transit VPC in each Region.
- D. Create a transit gateway in each Region with multiple newly commissioned VPN connections from each data center. Share the transit gateways with each account by using AWS Resource Access Manager (AWS RAM). In each Region, attach the transit gateway to each VPC. Remove the existing VPN connections that are attached directly to the virtual private gateways.

**Answer: D**

#### NEW QUESTION # 14

You are using CloudHSM to provide secure storage for cryptographic keys. Resource requirements change from time to time, and you need to distribute requests across a fleet of CloudHSM instances.

How can this be accomplished?

Response:

- A. CloudHSM instances in a cluster
- B. CloudHSM instances in an auto-scaling group plus an Elastic Load Balancer
- C. CloudHSM instances in a cluster plus an Elastic Load Balancer
- D. CloudHSM instances in an auto-scaling group

**Answer: A**

#### NEW QUESTION # 15

You own the example.com domain. Traffic is hitting an Application Load Balancer. Connections for dev.example.com need to be forwarded to a specific target group. All other connections should be forwarded to a different target group. How can this be done?

Response:

- A. Create an http-header condition in the Application Load Balancer
- B. Create a path condition in the Application Load Balancer
- C. Create an IP condition in the Application Load Balancer
- D. Create a host condition in the Application Load Balancer

**Answer: D**

#### NEW QUESTION # 16

Which of the following is not used for billing of the Network Address Translation (NAT) gateway?

Response:

- A. NAT gateway data processing charge
- B. NAT gateway hourly charge
- C. Data transfer charge
- D. Active session charge

**Answer: D**
