Development-Lifecycle-and-Deployment-Architect専門知識訓練、Development-Lifecycle-and-Deployment-Architect試験過去問

Salesforce Development-Lifecycle-and-Deployment-Architect資格認定はバッジのような存在で、あなたの所有する専門技術と能力を上司に直ちに知られさせます。次のジョブプロモーション、プロジェクトとチャンス을申し込むとき、Salesforce Development-Lifecycle-and-Deployment-Architect資格認定はライバルに先立つのを助け、あなたの大業を成し遂げられます。

Salesforce Certified Development Lifecycle and Deployment Architect 認定 Development-Lifecycle-and-Deployment-Architect 試験問題 (Q72-Q77):

質問 # 72

Universal Containers has developed teams working on multiple projects. They are exploring a source control tool to track and manage their code/config. What two benefits does a source control tool provide? Choose 2 ans

- A. Provides the ability to automatically identify issues in code/configuration.
- B. Provide the ability for distributed teams to work in isolation.
- C. Provides the ability to backup code/configuration changes.
- D. Provides automated code/configuration deployments.

正解: B、C

解説:

A source control tool provides the ability for distributed teams to work in isolation, as they can create branches and merge their changes later. It also provides the ability to backup code/configuration changes, as they can be stored in a remote repository and retrieved if needed.

質問 # 73

What advice should a technical architect provide in a Change Advisory Board meeting?

- A. Solution is usable by the business.
- B. Troubleshooting strategies for deployment issues
- C. Solution is technically sound.
- D. Functionality meets the business needs.

正解: B

解説:

Explanation

The advice that a technical architect should provide in a Change Advisory Board meeting is troubleshooting strategies for deployment issues. This is because the Change Advisory Board is responsible for reviewing and approving changes to the IT environment, and the technical architect should provide guidance on how to resolve any potential problems that may arise during the deployment process. The other options are not relevant for the Change Advisory Board meeting, as they are more related to the requirements analysis, design, or testing phases of the development lifecycle.

質問 # 74

Cloud Kicks (CK) is launching a new sneaker line during the upcoming holiday season and needs to do a thorough batch data testing before Go-Live. CK is using Salesforce unlimited edition.

What two sandbox types should the architect recommend for batch data testing?

Choose 2 answers

- A. Developer sandbox
- B. Partial Copy sandbox
- C. Full sandbox
- D. Developer Pro sandbox

正解: B、C

解説:

Explanation

The sandbox types that the architect should recommend for batch data testing are Partial Copy sandbox and Full sandbox. These sandbox types allow the testing of large data sets that are similar to the production data.

Developer Pro sandbox and Developer sandbox have limited storage and may not be able to accommodate the data needed for the batch data testing.

質問 # 75

What two things are needed to delete metadata with a deploy() call? Choose 2 answers

- A. DestructiveChanges.xml file.
- B. Package.XML file.
- C. PurgeOnDelete option must be set to TRUE.
- D. The CURRENT API version must be used.

正解: A、B

解説:

Explanation

To delete metadata with a deploy() call, two things are needed: a package.xml file and a destructiveChanges.xml file. The

package.xml file specifies the API version and the components to be deployed, while the destructiveChanges.xml file specifies the components to be deleted. The API version does not have to be the current one, as long as it is compatible with the components. The purgeOnDelete option is not required, as it only determines whether the deleted components are stored in the recycle bin or not.

質問 # 76

Universal Containers is looking to install a new application to enable advanced quoting in its current Professional Edition org. The org is near capacity with object and tab limits. Which two solutions should the Architect recommend? Choose 2 answers

- A. Buy more user licenses to increase org limits
- **B. Install an Aloha certified App**
- C. Create and install an unmanaged package
- **D. Upgrade to an Enterprise Edition org**

正解: B、D

解説:

A and B are the correct answers, as installing an Aloha certified app and upgrading to an Enterprise Edition org are the best solutions to enable advanced quoting in the current Professional Edition org. An Aloha certified app is an app that does not count against the org limits, such as objects and tabs, and can provide additional functionality and features. Upgrading to an Enterprise Edition org can increase the org limits, as well as provide access to more customization and automation options. C is incorrect, as creating and installing an unmanaged package is not a good solution, as it will consume the org limits and may not provide the desired functionality. D is incorrect, as buying more user licenses will not increase the org limits, but only the number of users who can access the org. You can learn more about this topic in the Salesforce Editions and Limits module on Trailhead.
