Oracle Cloud Infrastructure 2025 Migration Architect Professional Sample Questions (Q26-Q31):

NEW QUESTION # 26

What is a valid purpose for creating multiple Migration Plans for each Migration Project in Oracle Cloud Migrations?

- A. To create a backup from the existing Migration Plan, as a precautionary measure against misconfiguration
- B. To incrementally increase the allocated budget for each Migration Plan
- **C. To validate different compute shapes for each VM ensuring the most effective configuration can be chosen**
- D. To accelerate the migration task by assigning each Migration Plan to the respective migration team

Answer: C

Explanation:

Creating multiple Migration Plans for each Migration Project allows for the validation of different compute shapes for each VM. This ensures that the most effective configuration can be chosen based on the specific requirements of each workload, leading to optimized performance and resource utilization in the Oracle Cloud Migration.

NEW QUESTION # 27

How does the Copy to another region feature in Oracle Cloud Infrastructure (OCI) aid in achieving smooth transitions during Block Volume migration?

- A. It automates the migration process by transferring applications between regions
- **B. It replicates Block Volume backups to a target region, enabling smooth data migration**
- C. It ensures real-time data synchronization during migration for minimal downtime
- D. It compresses backup data before transferring, thereby expediting the migration process

Answer: B

Explanation:

The correct choice is that the Copy to another region feature in OCI aids in achieving smooth transitions during Block Volume migration by replicating Block Volume backups to a target region. This enables a seamless data migration process without the need for manual backup and restore operations.

NEW QUESTION # 28

In the context of Oracle Cloud Infrastructure (OCI) Object Storage replication, what happens to objects that were uploaded to the source bucket before the replication policy was created?

- A. Are asynchronously replicated to the destination bucket upon policy creation
- B. Are automatically deleted from the source bucket

- C. Are not replicated
- D. Are immediately replicated to the destination bucket upon policy creation

Answer: C

Explanation:

Objects that were uploaded to the source bucket before the replication policy was created are not replicated to the destination bucket. The replication policy only applies to objects uploaded after the policy is set up and does not include pre-existing objects.

NEW QUESTION # 29

How does containerization differ from virtualization in terms of resource optimization?

- A. Virtualization maximizes efficiency by running multiple applications on the same OS kernel
- B. Virtualization offers more flexibility in terms of application dependencies
- C. Containers require a full operating system to run, whereas virtual machines share a single operating system
- D. Containerization allows for more efficient utilization of hardware resources by sharing the host operating system

Answer: D

Explanation:

Containerization allows for more efficient utilization of hardware resources by sharing the host operating system. Containers only package the application and its dependencies, running on top of the host OS without the need for a separate guest OS.

NEW QUESTION # 30

During which phase of migration to Oracle Cloud Infrastructure Container Engine for Kubernetes (OKE), do you focus on tasks such as configuring Identity and Access Management (IAM), setting up billing, establishing network connectivity, and hardening the security of OKE clusters?

- A. Evaluating and identifying workloads
- B. Optimizing the environment
- C. Implementing workloads
- D. Planning and establishing a foundation

Answer: D

Explanation:

Planning and establishing a foundation is the phase where tasks such as configuring IAM, setting up billing, establishing network connectivity, and hardening the security of OKE clusters are performed. This phase lays the groundwork for the successful migration of workloads to OKE by ensuring the necessary infrastructure and security measures are in place.
