What tool should the agents use to upload records?

- A. Bulk API
- B. Apex
- C. **Date Import Wizard**
- D. Data Loader

**Answer: C**

Data Import Wizard is a tool that allows administrators to import data for standard and custom objects in Salesforce using CSV files. Data Import Wizard can handle up to 50,000 records at a time and supports simple data transformations and validations. Data Import Wizard can be used to upload records for a custom object when the number of records is small and the import frequency is low.

#### NEW QUESTION # 29

The sales manager at Cloud Kicks (CK) wants to make sure the accounts that CK serves are happy. One way they track this is by how many open cases an account has with CK. The sales manager asks CK's administrator to build a report to show Accounts with Open Cases.

What report type would this be?

- A. Summary Report
- B. **Joined Report**
- C. Matrix Report
- D. Bucket Report

**Answer: B**

Explanation:

A joined report is a type of report that allows you to create multiple report blocks that provide different views of your data. Each report block can have its own fields, columns, sorting, and filtering. A joined report can only be created from summary or matrix reports. You can use a joined report to show data from different report types or data sources on a single report. In this case, you can use a joined report to show Accounts with Open Cases by creating two report blocks: one for accounts and one for cases with a filter for open status.

You can then join the two blocks by a common field such as Account ID or Account Name. References:

- **B. Create a validation rule to ensure the length.**
- C. Define the number of mask characters.
- D. Use the credit card number mask type.

**Answer: B**

Explanation:

A validation rule is a formula that validates the data entered by a user and prevents the record from being saved if the data does not meet certain criteria. In this case, the administrator can create a validation rule to ensure that the custom encrypted field for credit card numbers has exactly 16 digits. The other options are not applicable for encrypted fields. References:

What should the administrator review to meet this requirement?

- A. Historical Trending
- **B. Setup Audit Trail**

- D. Analytic Snapshot

**Answer: B**

The log shows up to 20 fields of information for each change, such as who made it, when it was made, what type of change it was, and what values were changed. You can use the Setup Audit Trail to track configuration changes directly in production and identify any unauthorized or problematic changes. One of the changes that the Setup Audit Trail tracks is when a user's profile is changed and who changed it. - **A. Use a Cross Filter with WITHOUT logic.**

- B. Use PREVGROUPVAL() in Report Builder.
- C. Use a Summary report with Bucket Columns.
- D. Use Role Hierarchy filter to restrict related records.

**Answer: A**

A cross filter is a filter that lets you include or exclude records in your report based on related objects and their fields. You can use cross filters to create reports on accounts with or without opportunities, contacts, cases, or other related objects. In this case, you can use a cross filter with WITHOUT logic to show accounts without assets that have a certain product name or code.
