P.S. Free 2026 Confluent CCAAK dumps are available on Google Drive shared by Lead2Passed: <https://drive.google.com/open?id=10Jk2r2FJzymNHcU6UR4wiShGhpv3-IB9>

To stay updated and competitive in the market you have to upgrade your skills and knowledge level. Fortunately, with the Confluent Certified Administrator for Apache Kafka (CCAAK) certification exam you can do this job easily and quickly. To do this you just need to pass the Confluent Certified Administrator for Apache Kafka (CCAAK) certification exam. The Confluent Certified Administrator for Apache Kafka (CCAAK) certification exam is the top-rated and career advancement Confluent CCAAK certification in the market.

The Confluent CCAAK certification brings multiple career benefits. Reputed firms happily hire you for well-paid jobs when you earn the Confluent Certified Administrator for Apache Kafka. If you are already an employee of a tech company, you get promotions and salary hikes upon getting the CCAAK credential. All these career benefits come when you crack the Confluent CCAAK certification examination. To pass the CCAAK test, you need to prepare well from updated practice material such as real Confluent CCAAK Exam Questions.

Hot Valid Test CCAAK Tutorial | Pass-Sure CCAAK: Confluent Certified Administrator for Apache Kafka 100% Pass

Lead2Passed is one of the trusted and reliable platforms that is committed to offering quick CCAAK exam preparation. To achieve this objective Lead2Passed is offering valid, updated, and Real CCAAK Exam Questions. These Lead2Passed Confluent Certified Administrator for Apache Kafka (CCAAK) exam dumps will provide you with everything that you need to prepare and pass the final CCAAK exam with flying colors.

Confluent CCAAK Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Apache Kafka® Security: This section of the exam measures skills of a Site Reliability Engineer and focuses on securing Kafka environments. It includes authentication mechanisms such as TLS and SASL, authorization using ACLs, and encrypting data at rest and in transit to ensure secure communication and access control.

Topic 2	<ul style="list-style-type: none"> • Observability: This section of the exam measures skills of a Site Reliability Engineer and focuses on monitoring Kafka clusters. It assesses knowledge of metrics, logging, and alerting tools, including how to use them to maintain cluster health and performance visibility.
Topic 3	<ul style="list-style-type: none"> • Deployment Architecture: This section of the exam measures skills of a Kafka Administrator and covers different Kafka deployment topologies. It evaluates understanding of high availability, disaster recovery, multi-data center replication, and the roles of Zookeeper or KRaft in the cluster architecture.

Confluent Certified Administrator for Apache Kafka Sample Questions (Q46-Q51):

NEW QUESTION # 46

A topic 'recurring payments' is created on a Kafka cluster with three brokers (broker id '0', '1', '2') and nine partitions. The 'min.insync.replicas' is set to three, and producer is set with 'acks' as 'all'. Kafka Broker with id '0' is down. Which statement is correct?

- A. Consumers can read committed messages from partitions on broker id T, "2\"
- B. Producers will only be able to write messages to the topic where the Leader for the partition is on Broker id T.
- C. Producers can write messages to all the partitions, because new leaders for the partitions will be elected.
- **D. Producers and consumers will have no impact on six of the nine partitions.**

Answer: D

Explanation:

With 9 partitions spread across 3 brokers, each broker typically hosts 3 leaders (assuming even distribution). When Broker 0 fails, the partitions for which it was leader will elect new leaders on brokers 1 or 2 if enough in-sync replicas (ISRs) remain. But since min.insync.replicas=3 and only 2 brokers are up, no partition can meet the minimum in-sync replica requirement, so producers with acks=all will fail to write. However, for partitions where Broker 0 is not the leader, consumers can still read committed messages. Given that only 3 partitions likely had Broker 0 as leader, six partitions remain accessible for reads, but not writes.

NEW QUESTION # 47

An employee in the reporting department needs assistance because their data feed is slowing down. You start by quickly checking the consumer lag for the clients on the data stream.

Which command will allow you to quickly check for lag on the consumers?

- A. bin/kafka-consumer-group-throughput.sh
- B. bin/kafka-reassign-partitions.sh
- **C. bin/kafka-consumer-groups.sh**
- D. bin/kafka-consumer-lag.sh

Answer: C

Explanation:

The kafka-consumer-groups.sh script is used to inspect consumer group details, including consumer lag, which indicates how far behind a consumer is from the latest data in the partition.

The typical usage is bin/kafka-consumer-groups.sh --bootstrap-server <broker> --describe --group <group_id>

NEW QUESTION # 48

Multiple clients are sharing a Kafka cluster.

As an administrator, how would you ensure that Kafka resources are distributed fairly to all clients?

- **A. Quotas**
- B. ACLs
- C. Rebalancing
- D. Consumer Groups

Answer: A

Explanation:

Kafka quotas allow administrators to control and limit the rate of data production and consumption per client (producer/consumer), ensuring fair use of broker resources among multiple clients.

NEW QUESTION # 49

Which technology can be used to perform event stream processing? (Choose two.)

- **A. Apache Kafka Streams**
- **B. Confluent ksqlDB**
- C. Confluent Replicator
- D. Confluent Schema Registry

Answer: A,B

Explanation:

Kafka Streams is a client library for building real-time applications that process and analyze data stored in Kafka.

ksqlDB enables event stream processing using SQL-like queries, allowing real-time transformation and analysis of Kafka topics.

NEW QUESTION # 50

When a broker goes down, what will the Controller do?

- A. Wait for a follower to take the lead.
- **B. Trigger a leader election among the remaining followers to distribute leadership.**
- C. Automatically elect the least loaded broker to become the leader for every orphan's partitions.
- D. Become the leader for the topic/partition that needs a leader, pending the broker return in the cluster.

Answer: B

Explanation:

When a broker goes down, the Controller detects the failure and triggers a leader election for all partitions that had their leader on the failed broker. The leader is chosen from the in-sync replicas (ISRs) of each partition.

NEW QUESTION # 51

.....

Of course, when you are seeking for exam materials, it is certain that you will find many different materials. However, through investigation or personal experience, you will find Lead2Passed questions and answers are the best ones for your need. The candidates have not enough time to prepare the exam, while Lead2Passed certification training materials are to develop to solve the problem. So, it can save much time for us. What's more important, 100% guarantee to pass Confluent CCAAK Exam at the first attempt. In addition, Lead2Passed exam dumps will be updated at any time. If exam outline and the content change, Lead2Passed can provide you with the latest information.
