New Certification LEED-Green-Associate Exam Cost 100% Pass | High-

quality LEED-Green-Associate Reliable Source: LEED Green Associate Exam

Among global market, LEED-Green-Associate guide question is not taking up such a large share with high reputation for nothing. And we are the leading practice materials in this dynamic market. To facilitate your review process, all questions and answers of our LEED-Green-Associate test question is closely related with the real exam by our experts who constantly keep the updating of products to ensure the accuracy of questions, so all LEED-Green-Associate Guide question is 100 percent assured. We make LEED-Green-Associate exam prep from exam candidate perspective, and offer high quality practice materials with reasonable prices but various benefits.

USGBC LEED Green Associate Exam Sample Questions (Q247-Q252):

NEW QUESTION # 247

A company is considering investing in green power for its operations facilities, but is reluctant because of the high capital investment, maintenance costs and slow initial financial returns. Which of the following is a practical strategy to help the company overcome these obstacles?

- A. Divert the company's research and development funds to investment in large scale hydroelectric power
- B. Hire employees to staff a new operations department in preparation for the maintenance needs of the new renewable energy equipment
- C. Host an on-site renewable energy generation system and agree to buy the power without owning the equipment
- D. Relocate the company to a region that is better suited for harnessing renewable energy

Answer: C

Explanation:

A charrette is an intensive, multi-disciplinary workshop with the aim of developing a design or vision for a project or planning activity. Charrettes are often conducted to design such things as parks and buildings, or to plan communities or transportation systems. A charrette should take place at the beginning of the project, when the design team can engage with all the stakeholders, including the client, users, consultants, contractors, regulators, and community members. A charrette at this stage can help to:

Establish clear goals and objectives for the project

Identify opportunities and constraints for the site and program

Generate creative and innovative ideas and solutions

Foster collaboration and consensus among diverse perspectives

Reduce conflicts and delays during later phases of the project

Enhance communication and trust among the project team

The other options are not appropriate phases for a charrette. Post commissioning is too late to influence the design or planning of the project. During the design process, some decisions may have already been made or some stakeholders may have been excluded.

During the construction process, changes may be costly or impractical to implement. Reference: : Charrette

NEW QUESTION # 248

In a new building, which of the following is an effective way to confirm a building's performance compared with performance goals, design specifications, and the Owner's Project Requirements?

- A. Provide staff training
- B. Purchase Renewable Energy Certificates (RECs)
- C. Establish design and energy goals
- D. Perform Commissioning (Cx) activities

Answer: D

Explanation:

Commissioning (Cx) ensures that building systems meet the Owner's Project Requirements (OPR) and function as intended. It is required under EA Prerequisite: Fundamental Commissioning.

"Commissioning verifies that the building's energy-related systems are installed, calibrated, and perform according to the owner's project requirements."

- LEED v4 BD+C Reference Guide, EA Prerequisite: Fundamental Commissioning

NEW QUESTION # 249

What unit is green power purchased in?

- A. Megawatt-hour per square foot (MWh/sf)
- B. British thermal units (BTUs]
- **C. Kilowatt-hour (kWh)**
- D. Dollar amount of the purchase price

Answer: C

Explanation:

Explanation

Green power, like all electricity, is typically purchased in units of kilowatt-hours (kWh). This unit measures the amount of energy used over time. For example, a 1-kilowatt (1000 watts) appliance used for one hour consumes one kilowatt-hour of electricity.

NEW QUESTION # 250

Which of the following factors contributes to improved general health of building occupants and construction workers?

- **A. Application of construction management practices**
- B. Low ventilation rates
- C. Post-occupancy flush outs
- D. High VOC building materials

Answer: A

Explanation:

Construction management practices reduce dust and airborne contaminants, ensuring better health for both construction workers and future building occupants. LEED supports such strategies under Indoor Environmental Quality.

NEW QUESTION # 251

A building is located on a site without access to public transportation. Which of the following strategies can a project team implement in order to reduce the environmental impacts associated with how the occupants get to and from the building?

- A. Use compact development strategies
- B. Limit parking
- **C. Provide incentives for carpooling**
- D. Build underground parking structure

Answer: C

NEW QUESTION # 252

.....

The Internet is increasingly becoming a platform for us to work and learn, while many products are unreasonable in web design, and too much information is not properly classified. It's disorganized. Our LEED-Green-Associate study materials draw lessons from the experience of failure, will all kinds of qualification examination has carried on the classification of clear layout, at the same time the user when they entered the LEED-Green-Associate Study Materials page in the test module classification of clear, convenient to use a very short time to find what they want to study, which began the next exercise.
