Please contact us through email when you need us. The PDII question dumps produced by our company, is helpful for our customers to pass their exams and get the PDII certification within several days. Our PDII exam questions are your best choice.

Salesforce Platform Developer II Sample Questions (Q35-Q40):

NEW QUESTION # 35

A user receives the generic "An internal server error has occurred" while interacting with a custom Lightning component. What should the developer do to ensure a more meaningful message?

- A. Add an error-view component to the markup.
- B. Use platform events to process the error
- **C. Use an AuraHandledException in a try-catch block.**
- D. Add an onerror event handler to the tag.

Answer: C

NEW QUESTION # 36

For compliance purposes, a company is required to track long-term product usage in their org. The information that they need to log will be collected from more than one object and, over time, they predict they will have hundreds of millions of records. What should a developer use to implement this?

- A. Field History Tracking
- **B. Big objects**
- C. Field Audit Trail
- D. Setup Audit Trail

Answer: B

NEW QUESTION # 37

A developer is experiencing issues with a Lightning web component. The component must surface information about Opportunity owned by the currently logged-in user.

When the component is rendered, the following message is displayed: "Error retrieving data"

Which modification should be implemented to the Apex class to overcome the issue?

- **A. Use the Cacheable=True attribute in the Apex method.**
- B. Ensure the OWD for the Opportunity object is public.
- C. Use the Continuation=true attribute in the Apex method.
- D. Edit the code to use the without sharing keyword in the Apex class.

Answer: A

NEW QUESTION # 38

Recently a Salesforce org's integration failed because it exceeded the number of allowed API calls in a 24-hour period. The integration handles a near real-time, complex insertion of data into Salesforce. The flow of data is as follows: The integration looks up Contact records with a given email address and, if found, the integration adds a Task to the first matching Contact it finds. If a match is not found, the integration looks up Lead records with a given email address and, if found, the integration adds a Task to the first matching Lead it finds. If a match is not found, the integration will create a Lead and a Task for that newly created Lead. What is one way in which the integration can stay near real-time, but not exceed the number of allowed API calls in a 24-hour period?

- A. Create an Inbound Message that, using Flow, can do all of the logic the integration code was doing.
- B. write a custom Apex web service that, given an email address, does all of the logic the integration code was doing.
- C. Use the REST API as well as the SOAP API to effectively double the API calls allowed in a 24-hour period.
- **D. Create several Apex InboundEmailHandlers to accept calls from the third-party system, thus bypassing the API limits.**

Answer: D

NEW QUESTION # 39

A developer is creating a lightning web component to display a calendar. The component will be used in multiple countries. In some locales, the first day of the week is a Monday, or a Saturday, or a Sunday.

What should the developer do to ensure the calendar displays accurately for users in every locale?
