The Juniper JN0-253 certification exam is one of the top-rated and valuable credentials in the Juniper world. This Juniper JN0-253 certification exam is designed to validate a candidate's skills and knowledge. With Juniper JN0-253 Certification Exam everyone can upgrade their expertise and knowledge level.

Juniper JN0-253 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Juniper Mist Monitoring and Analytics: This domain focuses on monitoring tools including service-level expectations, packet captures, AI-driven insights, automated alerts, and audit logs for comprehensive network visibility.
Topic 2	<ul style="list-style-type: none">Juniper Mist Cloud Fundamentals: This domain covers Juniper's cloud-native platform architecture, focusing on AI and machine learning capabilities for intelligent network management and real-world deployment scenarios.
Topic 3	<ul style="list-style-type: none">Juniper Mist Configuration Basics: This domain addresses initial setup including user accounts, device onboarding, organizational structures, subscription licensing, certificate management, and automated provisioning with labels and policies.
Topic 4	<ul style="list-style-type: none">Juniper Mist Cloud Operations: This domain covers three API types (RESTful, WebSocket, Webhook) for programmatic integration, plus support resources including ticketing systems and documentation.
Topic 5	<ul style="list-style-type: none">Juniper Mist Network Operations and Management: This domain examines operational features across Wi-Fi, Wired, WAN, Routing, and Access Assurance, delivering specialized management capabilities for different network infrastructure layers.
Topic 6	<ul style="list-style-type: none">Location-based Services: This domain presents virtual Bluetooth Low Energy capabilities for asset tracking, visibility, and location-aware experiences that extend networking into physical space management.

2026 High-quality JN0-253: Mist AI, Associate (JNCIA-MistAI) Trustworthy Practice

Holding a certification in a certain field definitely shows that one has a good command of the JN0-253 knowledge and professional skills in the related field. However, the majority of the candidates for the JN0-253 exam are those who do not have enough spare time. But our company can provide the anecdote for you--our JN0-253 Study Materials. Under the guidance of our JN0-253 exam practice, you can definitely pass the exam as well as getting the related certification with the minimum time and efforts. Our JN0-253 exam questions will never let you down.

Juniper Mist AI, Associate (JNCIA-MistAI) Sample Questions (Q40-Q45):

NEW QUESTION # 40

Which statement is correct about the Super User account role?

- A. The Super User role has limited read/write capabilities.
- **B. You must use the Super User role to add administrators to an organization.**
- C. The Super User role is restricted to the specific sites that are defined when creating the user account.
- D. You must use the Super User role to claim an organization's new AP.

Answer: B

Explanation:

In the Juniper Mist Cloud platform, user roles define the scope of permissions that determine what administrative functions an individual can perform within an organization. The Super User role represents the highest level of administrative authority within a Juniper Mist organization and carries full control over both organization-wide and site-specific configurations.

According to the Juniper Mist Cloud Administration and User Management documentation, the Super User role is described as: "The Super User role provides full read and write access across the entire organization. Only Super Users can manage organization-level settings, add or remove other administrators, and assign privileges to users." This means that only a Super User can add new administrators, manage subscription entitlements, configure organization-level policies, and perform full lifecycle device management. Unlike site administrators, Super Users are not restricted to specific locations—they have unrestricted visibility and control across all sites within the organization.

Therefore, the correct answer is D, since the Super User role is explicitly required to add administrators to an organization and perform top-level management operations.

NEW QUESTION # 41

You are asked to configure a site in Juniper Mist.
Which statement describes completing this step?

- A. You must define your organization within the site.
- B. You must claim your site by scanning the access point's QR code.
- C. You must first configure the country, time zone, and location at the organization level.
- **D. You must configure the site within your organization.**

Answer: D

Explanation:

You must configure the site within your organization—this is the correct process according to Juniper Mist's official configuration guides. When setting up a deployment, first an organization is created in the Mist cloud.

Within this organization, sites are added for each physical location. The Mist documentation says: "You can create Sites in the Juniper Mist portal from the Organization > Site Configuration menu. Add or update sites as needed." The configuration requires the site name, country, and location to be set at the site level—not the organization level. Claiming APs via QR codes and organization definition are separate steps in device onboarding and initial setup.

NEW QUESTION # 42

Which statement is correct about the SLE dashboard?

- A. Both SLEs and classifiers are displayed as a percentage of failure.
- B. Both SLEs and classifiers are displayed as a percentage of success.
- **C. SLEs are displayed as a percentage of success and classifiers are displayed as a percentage of failure.**

- D. SLEs are displayed as a percentage of failure and classifiers are displayed as a percentage of success.

Answer: C

Explanation:

In the SLE dashboard, Service Level Expectations (SLEs) are shown as a percentage of success to highlight how well the network is performing. On the other hand, classifiers are displayed as a percentage of failure to indicate areas where issues are occurring and need attention. This approach helps provide a clear understanding of both overall performance and problem areas.

NEW QUESTION # 43

Which statement describes Marvis Actions?

- A. It is a dashboard that describes user actions.
- B. It is a dashboard that lists the actions taken by wireless users.
- **C. It is a dashboard that highlights actionable items.**
- D. It is a dashboard that details actions taken by the Marvis AI.

Answer: C

Explanation:

Marvis Actions is a component of the Mist AI platform that provides a dashboard highlighting actionable items. This dashboard is designed to offer insights and recommendations based on the analysis performed by Marvis AI.

The focus of Marvis Actions is to present users with clear, actionable steps that can improve network performance, resolve issues, and enhance the overall user experience. By consolidating relevant information and suggested actions, Marvis Actions helps network administrators efficiently address network challenges and optimize operations.

NEW QUESTION # 44

Where do reminders about subscription expiration appear in the Juniper Mist portal?

- A. In Marvis Actions
- B. In the dashboard alerts
- **C. In a banner message at the top of the Juniper Mist portal**
- D. In the device's insights section

Answer: C

Explanation:

Juniper Mist Cloud provides visual and automated notifications to alert administrators about subscription status and expiration for services such as Wireless Assurance, Wired Assurance, WAN Assurance, Premium Analytics, and Marvis AI.

According to the Juniper Mist Cloud Administration and Licensing Guide, the system:

"Displays subscription and license expiration warnings in a banner across the top of the Mist portal interface when licenses are within their renewal window." This banner typically appears in yellow or red, depending on urgency, and includes direct links to the Subscriptions page for renewal actions.

While subscription status information can also be viewed manually under Organization # Subscriptions, the real-time reminders and notifications appear as banner messages at the top of the Mist Portal.

Options B, C, and D are incorrect because:

- * Dashboard alerts focus on network events, not licensing.
- * Marvis Actions highlights operational or performance issues.
- * Device insights report performance metrics, not subscription data.

Therefore, the correct answer is A. In a banner message at the top of the Juniper Mist portal.
