Salesforce High Pass-Rate Guaranteed Data-Architect Success – Pass Data-Architect First Attempt

The rapid development of information will not infringe on the learning value of our Data-Architect study materials, because our customers will have the privilege to enjoy the free update for one year. You will receive the renewal of Data-Architect study materials through the email. And our Data-Architect study materials have three different version can meet your demands. Firstly, PDF version is easy to read and print. Secondly software version does not limit to the number of installed computers, and it simulates the Real Data-Architect Exam environment, but it can only run on Windows operating system.

Salesforce Certified Data Architect Sample Questions (Q120-Q125):

NEW QUESTION # 120
(NTO) has multiple salesforce orgs based on geographical reports (AMER, EMEA, APAC). NTO products are in the AMER org and need to be created in the EMEA and APAC after the products are approved.
Which two features should a data architect recommend to share records between salesforce orgs? Choose 2.

- A. Change data capture (CDC)
- B. Salesforce 2 Salesforce
- C. Salesforce connect.
- D. Federation search

Answer: A,B

Explanation:
The two features that a data architect should recommend to share records between Salesforce orgs are:
Change Data Capture (CDC): This is a feature that publishes change events for changes in Salesforce records, such as create, update, delete, and undelete operations. Change events can be subscribed by external systems or other Salesforce orgs using various tools, such as Platform Events, Streaming API, or CometD. CDC can help keep data in sync between Salesforce orgs in near real time89.
Salesforce to Salesforce (S2S): This is a feature that allows sharing records and related data with other Salesforce orgs that you partner with. You can choose which records and fields to share, and which orgs to share with. You can also accept updates from the other orgs to keep the data consistent10.
Salesforce Connect is not a good feature to share records between Salesforce orgs because it is intended for integrating external data sources with Salesforce using external objects. Federation Search is not a good feature to share records between Salesforce orgs because it is intended for searching across multiple Salesforce orgs without sharing data.

NEW QUESTION # 121
UC has a classic encryption for Custom fields and is leveraging weekly data reports for data backups. During the data validation of exported data UC discovered that encrypted field values are still being exported as part of data exported. What should a data architect recommend to make sure decrypted values are exported during data export?

- A. Create another field to copy data from encrypted field and use this field in export
- B. Set a standard profile for Data Migration user, and assign view encrypted data
- C. Leverage Apex class to decrypt data before exporting it.
- D. Set up a custom profile for data migration user and assign view encrypted data.

Answer: A

Explanation:
The best solution to make sure decrypted values are exported during data export is to create another field to copy data from encrypted field and use this field in export. This is because classic encryption does not support exporting decrypted values of encrypted fields. The view encrypted data permission only allows users to view decrypted values in the user interface, but not in reports or data exports. Therefore, a workaround is to create a formula field or a workflow field update that copies the value of the encrypted field to another field, and use that field for data export. However, this solution has some drawbacks, such as exposing sensitive data in plain text and consuming extra storage space. A better solution would be to use Shield Platform Encryption, which supports exporting decrypted values of encrypted fields with the Export Encrypted Data permission

NEW QUESTION # 122
(NTO) has multiple salesforce orgs based on geographical reports (AMER, EMEA, APAC). NTO products are in the AMER org and need to be created in the EMEA and APAC after the products are approved.
Which two features should a data architect recommend to share records between salesforce orgs? Choose 2.

- A. Change data capture (CDC)
- B. Salesforce 2 Salesforce
- C. Salesforce connect.
- D. Federation search

Answer: A,B

NEW QUESTION # 123

Universal Containers (UC) has lead assignment rules to assign leads to owners. Leads not routed by assignment rules are assigned to a dummy user. Sales rep are complaining of high load times and issues with accessing leads assigned to the dummy user.

What should a data architect recommend to solve these performance issues?

- A. Periodically delete leads to reduce number of leads
- B. Assign dummy user to highest role in role hierarchy
- C. Assign dummy user last role in role hierarchy
- D. Create multiple dummy user and assign leads to them

Answer: D

NEW QUESTION # 124

NTO processes orders from its website via an order management system (OMS). The OMS stores over 2 million historical records and is currently not integrated with SF. The Sales team at NTO using Sales cloud and would like visibility into related customer orders yet they do not want to persist millions of records directly in Salesforce. NTO has asked the data architect to evaluate SF connect and the concept of data verification. Which 3 considerations are needed prior to a SF Connect implementation?

Choose 3 answers:

- A. Develop an object relationship strategy.
- B. Assess whether the external data source is reachable via an ODATA endpoint.
- C. Identify the external tables to sync into external objects
- D. Configure a middleware tool to poll external table data
- E. Create a 2nd system Admin user for authentication to the external source.

Answer: A,B,C

NEW QUESTION # 125
