Fortinet FCSS - FortiSASE 25 Administrator Sample Questions (Q20-Q25):

NEW QUESTION # 20

What are two advantages of using zero-trust tags? (Choose two.)

- A. Zero-trust tags can help monitor endpoint system resource usage.
- **B. Zero-trust tags can be used to allow or deny access to network resources.**
- C. Zero-trust tags can be assigned to endpoint profiles based on user groups.
- **D. Zero-trust tags can determine the security posture of an endpoint.**

Answer: B,D

Explanation:

Zero-trust tags assess endpoint compliance based on defined posture rules and are used in access policies to control whether a device is permitted or denied access to specific network resources.

NEW QUESTION # 21

Which two statements describe a zero trust network access (ZTNA) private access use case? (Choose two.)

- A. All FortiSASE user-based deployments are supported.
- B. Data center redundancy is offered.
- **C. The security posture of the device is secure.**
- **D. All TCP-based applications are supported.**

Answer: C,D

Explanation:

Zero Trust Network Access (ZTNA) private access use cases focus on providing secure and controlled access to private applications without exposing them to the public internet. The following two statements accurately describe ZTNA private access use cases:

The security posture of the device is secure (Option A):

ZTNA enforces strict access controls based on the principle of least privilege. Before granting access to private applications, ZTNA evaluates the security posture of the device (e.g., whether it is patched, compliant, and free of malware). Only devices that meet the required security standards are granted access, ensuring that the device is secure before allowing private access.

All TCP-based applications are supported (Option C):

ZTNA supports all TCP-based applications, enabling secure access to a wide range of private applications, including legacy systems and custom-built applications. This flexibility makes ZTNA suitable for organizations with diverse application environments.

Here's why the other options are incorrect:

B. All FortiSASE user-based deployments are supported: While FortiSASE supports various deployment scenarios, not all user-based deployments are automatically compatible with ZTNA. Specific configurations and requirements must be met to enable ZTNA functionality.

D. Data center redundancy is offered: Data center redundancy is unrelated to ZTNA private access use cases. Redundancy typically pertains to infrastructure design and failover mechanisms, not access control methodologies like ZTNA.

A FortiSASE administrator has configured an antivirus profile in the security profile group and applied it to the internet access policy. Remote users are still able to download the eicar.com-zipfile from https://eicar.org.

Which configuration on FortiSASE is allowing users to perform the download?

- **A. Deep inspection is not enabled.**
- B. Application control is exempting all the browser traffic.
- C. Intrusion prevention is disabled.
- D. Web filter is allowing the URL.

Answer: A

Explanation:

The SSL inspection mode is set to certificate inspection, which only inspects SSL/TLS headers and does not allow full scanning of encrypted content. Without full (deep) inspection, the antivirus profile cannot scan or block malicious files (like eicar.com-zip) delivered over HTTPS, allowing the download to proceed.

NEW QUESTION # 23

Your FortiSASE customer has a small branch office in which ten users will be using their personal laptops and mobile devices to access the internet.

Which deployment should they use to secure their internet access with minimal configuration?

- A. Deploy FortiGate as a LAN extension to secure internet access.
- B. Deploy SD-WAN on-ramp to secure internet access.
- **C. Deploy FortiAP to secure internet access.**
- D. Deploy FortiClient endpoint agent to secure internet access.

Answer: C

Explanation:

Deploying FortiAP enables secure internet access for unmanaged personal devices in small branch offices with minimal configuration by automatically directing traffic through FortiSASE, eliminating the need for endpoint installation or complex setup.

NEW QUESTION # 24

- **A. device posture check**
- B. SSL inspection
- C. inline-CASB protection
- **D. vulnerability management**

Answer: A,D

Explanation:

When FortiClient is integrated with FortiSASE, it enables vulnerability management and device posture checks, allowing for advanced endpoint compliance enforcement - capabilities not available in standalone secure web gateway (SWG) deployments.
