HashiCorp Terraform-Associate-003 Answers Real Questions & Reliable Terraform-Associate-003 Exam Simulations

From the view of specialized examination point, it is necessary to teach you tips about the exam. You need to outsmart, and do not

give your future the chance of failure. TestkingPDF is a great resource site. It includes HashiCorp Terraform-Associate-003 Exam Materials, study materials and technical materials, as well as exam training and detailed explanation and answers. The website which provide exam information are surged in recent years. This may cause you clueless when you prepare the HashiCorp Terraform-Associate-003 Exam. TestkingPDF's HashiCorp Terraform-Associate-003 exam training materials are effective training materials that proven by professionals and the candidates who passed the exam. It can help you to pass the exam certification easily.

HashiCorp Certified: Terraform Associate (003) (HCTA0-003) Sample Questions (Q73-Q78):

NEW QUESTION # 73

Which method for sharing Terraform modules fulfills the following criteria:

Keeps the module configurations confidential within your organization.

Supports Terraform's semantic version constraints.

Provides a browsable directory of your modules.

- A. HCP Terraform/Terraform Cloud private registry.
- B. A Git repository containing your modules.
- C. Public Terraform module registry.
- D. A subfolder within your workspace.

Answer: A

Explanation:

Confidentiality: Using HCP Terraform/Terraform Cloud's private registry keeps the module configurations within your organization, ensuring privacy and access control.

Browsable Directory: The private registry offers a user interface to browse modules, making it easy for users within the organization to locate and manage modules.

This setup aligns with HashiCorp's design for private registry support in Terraform, meeting all listed requirements for secure, version-controlled, and searchable module storage.

NEW QUESTION # 74

Which of the following arguments are required when declaring a Terraform output?

- A. value
- B. default
- C. description
- D. sensitive

Answer: A

Explanation:

When declaring a Terraform output, the value argument is required. Outputs are a way to extract information from Terraform-managed infrastructure, and the value argument specifies what data will be outputted. While other arguments like description and sensitive can provide additional context or security around the output, value is the only mandatory argument needed to define an output.

References = The requirement of the value argument for outputs is specified in Terraform's official documentation, which provides guidelines on defining and using outputs in Terraform configurations.

NEW QUESTION # 75

Which configuration consistency errors does terraform validate report?

- A. Differences between local and remote state
- B. A mix of spaces and tabs in configuration files
- C. Declaring a resource identifier more than once
- D. Terraform module isn't the latest version

Answer: C

Explanation:

Terraform validate reports configuration consistency errors, such as declaring a resource identifier more than once. This means that the same resource type and name combination is used for multiple resource blocks, which is not allowed in Terraform. For example, resource "aws_instance" "example" {...} cannot be used more than once in the same configuration. Terraform validate does not report errors related to module versions, state differences, or formatting issues, as these are not relevant for checking the configuration syntax and structure. Reference = [Validate Configuration], [Resource Syntax]

NEW QUESTION # 76

Which option cannot be used to keep secrets out of Terraform configuration files?

- A. A Terraform provider
- **B. secure string**
- C. A -var flag
- D. Environment variables

Answer: B

Explanation:
Explanation

A secure string is not a valid option to keep secrets out of Terraform configuration files. A secure string is a feature of AWS Systems Manager Parameter Store that allows you to store sensitive data encrypted with a KMS key. However, Terraform does not support secure strings natively and requires a custom data source to retrieve them. The other options are valid ways to keep secrets out of Terraform configuration files. A Terraform provider can expose secrets as data sources that can be referenced in the configuration. Environment variables can be used to set values for input variables that contain secrets. A -var flag can be used to pass values for input variables that contain secrets from the command line or a file. References = [AWS Systems Manager Parameter Store], [Terraform AWS Provider Issue #55], [Terraform Providers], [Terraform Input Variables]

NEW QUESTION # 77

What does terraform import do?

- A. Imports all infrastructure from a given cloud provider
- **B. Imports existing resources into the state file**
- C. None of the above
- D. Imports a new Terraform module
- E. Imports clean copies of tainted resources

Answer: B

Explanation:

The terraform import command is used to import existing infrastructure into your Terraform state. This command takes the existing resource and associates it with a resource defined in your Terraform configuration, updating the state file accordingly. It does not generate configuration for the resource, only the state.

NEW QUESTION # 78

.....

Our Terraform-Associate-003 study materials do our best to find all the valuable reference books, then, the product we hired experts will carefully analyzing and summarizing the related materials, such as: Terraform-Associate-003 Terraform-Associate-003 exam, eventually form a complete set of the review system. Experts before starting the compilation of "the Terraform-Associate-003 study materials ", has put all the contents of the knowledge point build a clear framework in mind, though it needs a long wait, but product experts and not give up, but always adhere to the effort, in the end, they finished all the compilation. So, you're lucky enough to meet our Terraform-Associate-003 Study Materials I, and it's all the work of the experts.
