Latest CLF-C02 Demo - Reliable CLF-C02 Study Guide

The superb CLF-C02 practice braindumps have been prepared extracting content from the most reliable and authentic exam study

sources by our professional experts. As long as you have a look at them, you will find that there is no question of inaccuracy and outdated information in them. And our CLF-C02 Study Materials are the exact exam questions and answers you will need to pass the exam. What is more, you will find that we always update our CLF-C02 exam questions to the latest.

Amazon AWS Certified Cloud Practitioner Sample Questions (Q881-Q886):

NEW QUESTION # 881
Which option is the default pricing model for Amazon EC2 instances?

- A. Spot Instances
- B. Savings Plans
- C. Reserved Instances
- D. On-Demand Instances

Answer: D

Explanation:
Explanation
On-Demand Instances are the default pricing model for Amazon EC2 instances. They allow users to pay for compute capacity by the second, with no long-term commitments or upfront payments. They are suitable for applications with short-term, irregular, or unpredictable workloads that cannot be interrupted3. Savings Plans are a pricing model that offer significant savings on Amazon EC2 and AWS Fargate usage, in exchange for a commitment to a consistent amount of usage (measured in $/hour) for a 1-year or 3-year term. Spot Instances are a pricing model that offer spare Amazon EC2 compute capacity at up to 90% discount compared to On-Demand prices, but they can be interrupted by AWS with a two-minute notice when the demand exceeds the supply. Reserved Instances are a pricing model that offer up to 75% discount compared to On-Demand prices, in exchange for a commitment to use a specific instance type and size in a specific region for a 1-year or 3-year term.

NEW QUESTION # 882
A company wants to generate a list of IAM users. The company also wants to view the status of various credentials that are associated with the users, such as password, access keys: and multi-factor authentication (MFA) devices Which AWS service or feature will meet these requirements?

- A. AWS IAM Identity Center (AWS Single Sign-On)
- B. AWS Cost and Usage Report
- C. AWS Identity and Access Management Access Analyzer
- D. IAM credential report

Answer: D

Explanation:
Explanation
An IAM credential report is a feature of AWS Identity and Access Management (IAM) that allows you to view and download a report that lists all IAM users in your account and the status of their various credentials, such as passwords, access keys, and MFA devices. You can use this report to audit the security status of your IAM users and ensure that they follow the best practices for credential management1. References: 1: AWS Documentation - IAM User Guide - Getting credential reports for your AWS account

NEW QUESTION # 883
A company needs to implement identity management for a fleet of mobile apps that are running in the AWS Cloud.
Which AWS service will meet this requirement?

- A. AWS Shield
- B. AWS Security Hub
- C. Amazon Cognito
- D. AWS WAF

Answer: C

Explanation:

Explanation
Amazon Cognito is a service that provides identity management for mobile and web applications, allowing users to sign up, sign in, and access AWS resources with different identity providers. AWS Security Hub is a service that provides a comprehensive view of the security posture of AWS accounts and resources. AWS Shield is a service that provides protection against distributed denial of service (DDoS) attacks. AWS WAF is a web application firewall that helps protect web applications from common web exploits.

NEW QUESTION # 884

A company needs to migrate all of its development teams to a cloud-based integrated development environment (IDE).
Which AWS service should the company use?

- A. AWS Cloud Development Kit (AWS CDK)
- B. AWS OpsWorks
- C. AWS Cloud9
- D. AWS CodeBuild

Answer: C

Explanation:
Explanation
The correct answer is B because AWS Cloud9 is an AWS service that enables users to run their existing custom, nonproduction workloads in the AWS Cloud quickly and cost-effectively. AWS Cloud9 is a cloud-based integrated development environment (IDE) that allows users to write, run, and debug code from a web browser. AWS Cloud9 supports multiple programming languages, such as Python, Java, Node.js, and more. AWS Cloud9 also provides users with a terminal that can access AWS services and resources, such as Amazon EC2 instances, AWS Lambda functions, and AWS CloudFormation stacks. The other options are incorrect because they are not AWS services that enable users to run their existing custom, nonproduction workloads in the AWS Cloud quickly and cost-effectively. AWS CodeBuild is an AWS service that enables users to compile, test, and package their code for deployment. AWS OpsWorks is an AWS service that enables users to configure and manage their applications using Chef or Puppet. AWS Cloud Development Kit (AWS CDK) is an AWS service that enables users to define and provision their cloud infrastructure using familiar programming languages, such as TypeScript, Python, Java, and C#. NEW QUESTION # 885

A company is running workloads for multiple departments within a single VPC. The company needs to be able to bill each department for its resource usage.
Which action should the company take to accomplish this goal with the LEAST operational overhead?

- A. Move each department resource to its own VPC.
- B. Add a department tag to each resource and configure cost allocation tags.
- C. Use AWS Organizations to get a billing report for each department.
- D. Move each department resource to its own AWS account.

Answer: B

Explanation:
Adding a department tag to each resource and configuring cost allocation tags is an action that can help you accomplish the goal of billing each department for its resource usage with the least operational overhead. Tags are simple labels consisting of a key and an optional value that you can assign to AWS resources. You can use tags to organize your resources and track your AWS costs on a detailed level. Cost allocation tags enable you to track your AWS costs on a detailed level. After you activate cost allocation tags, AWS uses the cost allocation tags to organize your resource costs on your cost allocation report, to make it easier for you to categorize and track your AWS costs2. Moving each department resource to its own VPC or its own AWS account is an action that can help you isolate and control the resources for each department, but it would incur more operational overhead than using tags. Using AWS Organizations to get a billing report for each department is an action that can help you consolidate billing and payment across multiple AWS accounts, but it would not help you bill each department for its resource usage within a single VPC.

NEW QUESTION # 886

......

LatestCram is a leading platform that has been helping the CLF-C02 exam candidates for many years. Over this long time period,

countless Amazon CLF-C02 exam candidates have passed their dream AWS Certified Cloud Practitioner (CLF-C02) certification and they all got help from valid, updated, and Real CLF-C02 Exam Questions. So you can also trust the top standard of CLF-C02 exam dumps and start CLF-C02 practice questions preparation without wasting further time.
