Pass Guaranteed 2026 Marvelous Google Professional-Cloud-Architect Latest Exam Online

We know that your work is very busy, and there are many trivial things in life. There is not much time you can spend on research. But our Professional-Cloud-Architect exam questions can promise to take the exam 20 to 30 hours after you use our products. The idea of Professional-Cloud-Architect study materials is to let you learn the most valuable things in the shortest possible time. And it is proved and tested by tens of thousands of our loyal customers. And our Professional-Cloud-Architect training engine can help you achieve success with 100% guarantee.

Google Certified Professional - Cloud Architect (GCP) Sample Questions (Q126-Q131):

NEW QUESTION # 126
Your company plans to migrate a multi-petabyte data set to the cloud. The data set must be available 24hrs a day. Your business analysts have experience only with using a SQL interface. How should you store the data to optimize it for ease of analysis?

- A. Stream data into Google Cloud Datastore.
- B. Load data into Google BigQuery.
- C. Put flat files into Google Cloud Storage.
- D. Insert data into Google Cloud SQL.

Answer: B

Explanation:
BigQuery is Google's serverless, highly scalable, low cost enterprise data warehouse designed to make all your data analysts productive. Because there is no infrastructure to manage, you can focus on analyzing data to find meaningful insights using familiar SQL and you don't need a database administrator.
BigQuery enables you to analyze all your data by creating a logical data warehouse over managed, columnar storage as well as data from object storage, and spreadsheets.

https://cloud.google.com/bigquery/

NEW QUESTION # 127
Your customer support tool logs all email and chat conversations to Cloud Bigtable for retention and analysis.
What is the recommended approach for sanitizing this data of personally identifiable information or payment card information before initial storage?

- A. Use regular expressions to find and redact phone numbers, email addresses, and credit card numbers
- B. De-identify the data with the Cloud Data Loss Prevention API
- C. Hash all data using SHA256
- D. Encrypt all data using elliptic curve cryptography

Answer: B

Explanation:

NEW QUESTION # 128
For this question, refer to the Dress4Win case study.
At Dress4Win, an operations engineer wants to create a tow-cost solution to remotely archive copies of database backup files. The database files are compressed tar files stored in their current data center. How should he proceed?

- A. Create a cron script using gsutil to copy the files to a Coldline Storage bucket.
- B. Create a cron script using gsutil to copy the files to a Regional Storage bucket.
- C. Create a Cloud Storage Transfer Service job to copy the files to a Regional Storage bucket.
- D. Create a Cloud Storage Transfer Service Job to copy the files to a Coldline Storage bucket.

Answer: A

Explanation:
Reference:
Follow these rules of thumb when deciding whether to use gsutil or Storage Transfer Service:
When transferring data from an on-premises location, use gsutil.
When transferring data from another cloud storage provider, use Storage Transfer Service.
Otherwise, evaluate both tools with respect to your specific scenario.
Use this guidance as a starting point. The specific details of your transfer scenario will also help you determine which tool is more appropriate

NEW QUESTION # 129

Your company has successfully migrated to the cloud and wants to analyze their data stream to optimize operations. They do not have any existing code for this analysis, so they are exploring all their options. These options include a mix of batch and stream processing, as they are running some hourly jobs and live-processing some data as it comes in. Which technology should they use for this?

- A. Google Container Engine with Bigtable
- B. Google Cloud Dataproc
- C. Google Compute Engine with Google BigQuery
- D. Google Cloud Dataflow

Answer: D

Explanation:
Dataflow is for processing both the Batch and Stream.
Cloud Dataflow is a fully-managed service for transforming and enriching data in stream (real time) and batch (historical) modes with equal reliability and expressiveness -- no more complex workarounds or compromises needed.
