## Latest Professional-Cloud-Architect Braindumps, Professional-Cloud-Architect Download Demo

The purchase process of our Professional-Cloud-Architect question torrent is very convenient for all people. In order to meet the needs of all customers, our company is willing to provide all customers with the convenient purchase way. The PDF version of our Professional-Cloud-Architect study tool is very practical, which is mainly reflected on the special function. As I mentioned above, our company are willing to provide all people with the demo for free. You must want to know how to get the trial demo of our Professional-Cloud-Architect question torrent; the answer is the PDF version. You can download the free demo form the PDF version of our Professional-Cloud-Architect exam torrent. Maybe you think it does not prove the practicality of the PDF version, do not worry, we are going to tell us another special function about the PDF version of our Professional-Cloud-Architect study tool.

## Google Certified Professional - Cloud Architect (GCP) Sample Questions (Q255-Q260):

### NEW QUESTION # 255

You have created several preemptible Linux virtual machine instances using Google Compute Engine. You want to properly shut down your application before the virtual machines are preempted. What should you do?

- A. Create a shutdown script named k99.shutdown in the /etc/rc.6.d/ directory.
- B. Create a shutdown script and use it as the value for a new metadata entry with the key shutdown-script in the Cloud Platform Console when you create the new virtual machine instance.
- C. Create a shutdown script, registered as a xinetd service in Linux, and use the gcloud compute instances add-metadata command to specify the service URL as the value for a new metadata entry with the key shutdown-script-url
- **D. Create a shutdown script registered as a xinetd service in Linux and configure a Stackdriver endpoint check to call the service.**

**Answer: D**

### NEW QUESTION # 256

You have been asked to select the storage system for the click-data of your company's large portfolio of websites. This data is streamed in from a custom website analytics package at a typical rate of 6,000 clicks per minute. With bursts of up to 8,500 clicks per second. It must have been stored for future analysis by your data science and user experience teams.

Which storage infrastructure should you choose?

- A. Google Cloud Storage
- B. Google Cloud SQL
- **C. Google Cloud Bigtable**
- D. Google Cloud Datastore

**Answer: C**

Explanation:

Explanation/Reference:

Explanation:

Google Cloud Bigtable is a scalable, fully-managed NoSQL wide-column database that is suitable for both real-time access and analytics workloads.

Good for:

Low-latency read/write access

High-throughput analytics

Native time series support

Common workloads:

IoT, finance, adtech

Personalization, recommendations

Monitoring

Geospatial datasets

Graphs

Incorrect Answers:

C: Google Cloud Storage is a scalable, fully-managed, highly reliable, and cost-efficient object / blob store.

Is good for:

Images, pictures, and videos

Objects and blobs

Unstructured data

D: Google Cloud Datastore is a scalable, fully-managed NoSQL document database for your web and mobile applications.

Is good for:

Semi-structured application data

Hierarchical data

Durable key-value data

Common workloads:

- User profiles
- Product catalogs
- Game state
- References: <https://cloud.google.com/storage-options/>

#### NEW QUESTION # 257

Your organization requires that metrics from all applications be retained for 5 years for future analysis in possible legal proceedings. Which approach should you use?

- A. Configure Stackdriver Monitoring for all Projects with the default retention policies.
- B. Configure Stackdriver Monitoring for all Projects, and export to BigQuery.
- C. Grant the security team access to the logs in each Project.
- **D. Configure Stackdriver Monitoring for all Projects, and export to Google Cloud Storage.**

**Answer: D**

Explanation:

Overview of storage classes, price, and use cases <https://cloud.google.com/storage/docs/storage-classes> Why export logs?

<https://cloud.google.com/logging/docs/export/> StackDriver Quotas and Limits for Monitoring

<https://cloud.google.com/monitoring/quotas> The BigQuery pricing. <https://cloud.google.com/bigquery/pricing>

#### NEW QUESTION # 258

Your company is using Google Cloud. You have two folders under the Organization: Finance and Shopping. The members of the development team are in a Google Group. The development team group has been assigned the Project Owner role on the Organization. You want to prevent the development team from creating resources in projects in the Finance folder. What should you do?

- A. Assign the development team group only the Project Owner role on the Shopping folder.
- **B. Assign the development team group the Project Owner role on the Shopping folder, and remove the development team group Project Owner role from the Organization.**
- C. Assign the development team group the Project Viewer role on the Finance folder, and assign the development team group the Project Owner role on the Shopping folder.
- D. Assign the development team group only the Project Viewer role on the Finance folder.

**Answer: B**

Explanation:

<https://cloud.google.com/resource-manager/docs/cloud-platform-resource-hierarchy>

"Roles are always inherited, and there is no way to explicitly remove a permission for a lower-level resource that is granted at a higher level in the resource hierarchy. Given the above example, even if you were to remove the Project Editor role from Bob on the "Test GCP Project", he would still inherit that role from the "Dept Y" folder, so he would still have the permissions for that role on "Test GCP Project"."

#### NEW QUESTION # 259

You are managing an application deployed on Cloud Run for Anthos, and you need to define a strategy for deploying new versions of the application. You want to evaluate the new code with a subset of production traffic to decide whether to proceed with the rollout. What should you do?

- **A. Deploy a new revision to Cloud Run with the new version. Configure traffic percentage between revisions.**
- B. In the Google Cloud Console page for Cloud Run, set up continuous deployment using Cloud Build for the development branch. As part of the Cloud Build trigger, configure the substitution variable TRAFFIC\_PERCENTAGE with the percentage of traffic you want directed to a new version.
- C. In the Google Cloud Console, configure Traffic Director with a new Service that points to the new version of the application on Cloud Run. Configure Traffic Director to send a small percentage of traffic to the new version of the application.
- D. Deploy a new service to Cloud Run with the new version. Add a Cloud Load Balancing instance in front of both services.

**Answer: A**

## NEW QUESTION # 260
