Salesforce Certified Platform App Builder cexamkiller Praxis Dumps & Platform-App-Builder Test Training Überprüfungen

Machen Sie sich noch Sorgen um die Salesforce Platform-App-Builder (Salesforce Certified Platform App Builder) Zertifizierungsprüfung? Haben Sie schon mal gedacht, sich an einem entsprechenden Kurs teilzunehmen? Gute Prüfungsmaterialien zu wählen, wird Ihnen helfen, Ihre Fachkenntnisse zu konsolidieren und sich gut auf die Salesforce Platform-App-Builder Zertifizierungsprüfung vorbereiten. Das Expertenteam von ExamFragen hat endlich die neuesten zielgerichteten Schulungsunterlagen, die Ihnen beim Vorbereiten der Prüfung helfen, nach ihren Erfahrungen und Kenntnissen erforscht. Die Salesforce Platform-App-Builder Schulungsunterlagen von ExamFragen ist Ihre optimale Wahl.

Salesforce Certified Platform App Builder Platform-App-Builder Prüfungsfragen mit Lösungen (Q196-Q201):

196. Frage

Ursa Major Solar wants to automate a welcome email to new clients and include a customized survey about their buying experience. An app builder is tasked with this project and has very little time to build the solution from scratch, but still needs to be able to fully customize the solution.

What should the app builder do to meet the deadline and custom requirements?

- **A. Use Salesforce flow to build the survey declaratively to meet the criteria and send it to the customer as an email.**
- B. Choose an unmanaged package from AppExchange that closely meets the requirements of the project and allows programmatic development.
- C. Work with a developer to create custom Apex code and a Lightning web component survey to meet the criteria,
- D. Choose a managed package from AppExchange that closely meets the requirements of the project, restricts programmatic development, but allows declarative development

Antwort: A

Begründung:

Given the need to automate a welcome email including a customized survey with customization requirements and a tight timeline, the best approach is:

Use Salesforce Flow to build the survey declaratively to meet the criteria and send it to the customer as an email (B). Flow is a powerful tool for automation in Salesforce, allowing the creation of complex workflows and user interactions without needing to write custom code. It can be used to build a survey and integrate it with email services for automated dispatch.

Working with a developer to create custom Apex and LWC (A) might meet the criteria but would not align with the limited time frame. Managed (C) and unmanaged packages (D) from AppExchange can provide pre-built solutions, but they may not offer the needed customization or could require more setup time than building directly in Flow.

Reference for automating processes with Salesforce Flow:

Salesforce Flow: https://help.salesforce.com/articleView?id=sf.flow_considerations_design.htm&type=5

197. Frage

An app builder received a request to extend record access beyond the organization-wide defaults configured. Which two features satisfy this requirement?

Choose 2 answers

- **A. Sharing Rules**
- B. Manual Sharing Rules
- C. Permission Set Groups
- **D. Public Groups**

Antwort: A,D

198. Frage

Universal Containers has deployed custom tabs to Production via changes sets, without including the profile settings or permission sets.

What is the settings for the visibility of custom tabs?

- A. Custom tabs are hidden for all users.
- B. Custom tabs are NOT deployed.
- **C. Custom tabs are default off for all users.**
- D. Custom tabs are default on for all uses.

Antwort: C

Begründung:

Explanation

The setting for the visibility of custom tabs is default off for all users when they are deployed via change sets without including the profile settings or permission sets. This means that the custom tabs are not visible in any apps or navigation menus for any users unless they are manually added by each user or by an administrator.

Option B, C, and D are not correct settings for the visibility of custom tabs.

199. Frage

An app builder has a custom component they want to make available on the utility bar, but the component is unavailable.

How should the component be tagged?

- **A. For use on the utility bar.**
- B. For use in App Manager.

- C. For use on record pages.
- D. For use in Lightning App Builder.

Antwort: A

Begründung:

To make a custom component available for the utility bar in Salesforce, the component needs to be explicitly tagged for use in the utility bar. Salesforce components require specific configurations to be available in different parts of the application, such as the utility bar, record pages, or app pages.

Option C: For use on the utility bar: When a custom Lightning component is developed, it must include a specific target tag in its .js-meta.xml configuration file that marks it as usable in the utility bar. This is done by setting the target to "lightning__UtilityBar".

Without this tag, the component will not appear as an option to add to the utility bar in the App Manager.

Example of how the component is tagged in the meta.xml file:

xml

Copy code

```
<targets>
<target>lightning__UtilityBar</target>
</targets>
```

Reference:

Option A: For use on record pages: This tag makes the component available only on record pages, but not the utility bar. The component would have a target for lightning__RecordPage in this case.

Option B: For use in Lightning App Builder: This option would allow the component to be used in the Lightning App Builder, but it wouldn't make the component available for the utility bar. App Builder placement is typically for page layouts.

Option D: For use in App Manager: This is incorrect, as App Manager is used for managing apps and not for tagging components for availability.

In summary, to make the component available for the utility bar, it needs to be specifically tagged for that purpose using the lightning__UtilityBar target in the component's metadata file.

Reference:

Utility Bar Metadata Configuration

200. Frage

After a deal is closed, Cloud Kicks (CK) wants to assign a user as a customer service manager (CSM) in addition to the account owner and would like a new field to easily track and report which CSM is assigned to the Account.

Which solution should an app builder use for this request?

- A. Text field
- **B. Lookup field**
- C. Multi-select picklist field
- D. Picklist field

Antwort: B

Begründung:

Explanation

The solution that an app builder should use for this request is a lookup field. A lookup field is a type of relationship field that links two objects together and allows users to select a record from another object. The app builder can create a lookup field on the account object that references the user object and allows users to assign a customer service manager (CSM) to the account. Option A is incorrect because a multi-select picklist field is not suitable for this request, as multi-select picklist fields allow users to select multiple values from a predefined list, not from another object. Option B is incorrect because a picklist field is not suitable for this request, as picklist fields allow users to select one value from a predefined list, not from another object. Option D is incorrect because a text field is not suitable for this request, as text fields allow users to enter any alphanumeric characters, not from another object.

201. Frage

.....

Viele auf die Salesforce Platform-App-Builder Prüfung vorbereitende Prüfungsteilnehmer haben schon ins Berufsleben eingestiegen. Und manche davon stehen jetzt vor Herausforderungen anderer Sachen. Deshalb bieten wir die Prüfungsteilnehmer die effizienteste Methode für die Vorbereitung der Salesforce Platform-App-Builder. Um Sie unbesorgt unsere Produkte kaufen zu lassen, bieten wir
