**NEW QUESTION # 296**

Refer to the exhibit.

An application must be deployed on a server that has other applications installed. The server resources are to be allocated based on the deployment requirements. The OS for each application must be independent. Which type of deployment is used?

- A. bare metal
- B. virtual machines
- C. containers
- D. hybrid

**Answer: B**

Explanation:
The exhibit shows an architecture where each application runs in its own isolated environment with its own OS. This setup is typical of virtual machines (VMs), where multiple VMs can run on a single physical server managed by a hypervisor.
* Isolation: VMs provide complete isolation between applications, including independent operating systems.
* Resource Allocation: Resources such as CPU, memory, and storage can be allocated based on deployment requirements.
Option B is correct as the type of deployment used is virtual machines.
