C-SIGDA-2403 Hot Spot Questions, C-SIGDA-2403 Valid Test Pass4sure

The C-SIGDA-2403 exam questions given in this desktop SAP Certified Associate - Process Data Analyst - SAP Signavio (C-SIGDA-2403) practice exam software are equivalent to the actual SAP Certified Associate - Process Data Analyst - SAP Signavio (C-SIGDA-2403) exam. The desktop SAP C-SIGDA-2403 practice exam software can be used on Window based computers. If any issue arises, the RealValidExam support team is there to fix the issue. With more than thousands of satisfied customers around the globe, you can use the SAP C-SIGDA-2403 Study Materials of RealValidExam with confidence.

SAP Certified Associate - Process Data Analyst - SAP Signavio Sample Questions (Q21-Q26):

NEW QUESTION # 21

What are the benefits of using a data model in the ETL Data Pipeline configuration? Note: There are 2 correct answers to this question.

- A. Defines which process models are connected to the data
- B. Defines where to load the data
- C. Defines which process KPI's are related to which data table
- D. Defines how ETL extracts and transforms data

Answer: C,D

Explanation:

In the ETL (Extract, Transform, Load) Data Pipeline configuration, using a data model provides several benefits, including:

* Option A (Defines how ETL extracts and transforms data): A data model specifies the structure of the data, including relationships among different data entities. This helps in determining how data should be extracted from source systems and transformed to fit the model, ensuring data quality and consistency.

* Option C (Defines which process KPI's are related to which data table): By mapping process KPIs

NEW QUESTION # 22

How can KPI's from SAP Signavio Process Intelligence be visualized in the SAP Signavio Process Collaboration Hub? Note: There are 3 correct answers to this question.

- A. By case exporting
- B. By adding live KPI's into the process
- C. By monitoring widgets
- D. By adding live KPI's into the Customer Journey Map
- E. By workflow mining

Answer: B,C,D

Explanation:

In SAP Signavio, Key Performance Indicators (KPIs) from Process Intelligence can be visualized within the Process Collaboration Hub in several ways. Adding live KPIs into both the Customer Journey Map and the process diagrams enables real-time monitoring and assessment of process performance, directly within the context of the process flows. This integration aids in pinpointing performance bottlenecks and opportunities for improvement. Additionally, monitoring widgets can be used to display KPIs on dashboards, providing an overview of process health and performance trends at a glance. Exporting by case and workflow mining are not direct methods for visualizing KPIs within the Process Collaboration Hub. References: SAP Signavio User Guide

NEW QUESTION # 23

Which ID is needed to visualize KPI's in the SAP Signavio Process Collaboration Hub?

- A. Variant ID
- B. Event ID
- C. Case ID
- D. Widget ID

Answer: D

NEW QUESTION # 24

What does the strategic level focus on in Business Process Management?

- A. Align business processes to company goals.
- B. Define responsibilities in business processes.
- C. Run business tasks efficiently.
- D. Support business processes with the right systems.

Answer: A

Explanation:

At the strategic level, Business Process Management (BPM) focuses on aligning business processes with company goals. This alignment is essential for ensuring that all business activities contribute effectively towards achieving the overarching objectives and strategic vision of the organization. By aligning processes with company goals, organizations can ensure that their operations are strategically oriented, resource allocation is optimized, and every process improvement initiative contributes to the long-term success of the business. This strategic focus is distinct from operational concerns such as supporting processes with the right systems, defining responsibilities, or running tasks efficiently, which are more tactical or operational in nature. NEW QUESTION # 25

Which of the following Widgets need to be linked to a process model to provide insights? Note: There are 3 correct answers to this question.

- A. Process Discovery
- B. Process Funnel
- C. Variant Explorer
- D. Diagram
- E. Process Conformance

Answer: B,D,E

Explanation:

Certain widgets in SAP Signavio Process Intelligence require a link to a process model (e.g., a BPMN model) to generate meaningful insights by contextualizing data against a defined structure. The documentation specifies:

* Option A (Diagram):The Diagram Widget displays process models from the SAP Signavio Process Manager workspace and requires a link to a specific model to visualize it in the Collaboration Hub or Process Intelligence.

* Option D (Process Funnel):The Process Funnel Widget visualizes case progression along a process path and often needs to be linked to a process model to define the steps in the funnel, ensuring accurate representation of the process flow.

* Option E (Process Conformance):The Process Conformance Widget compares actual process execution against a reference BPMN model, requiring a direct link to the model to identify conformance issues.

* Option B (Process Discovery)is incorrect because it generates process models automatically from event logs without needing a predefined process model.
