

300-220 Customizable Exam Mode | 300-220 Latest Exam Test

P.S. Free 2026 Cisco 300-220 dumps are available on Google Drive shared by PassSureExam: <https://drive.google.com/open?id=1QwiOLQ22THaQFtXQAQjjGJMUtH07NKC>

Forget your daydream! Forget living in cloud-cuckoo-land! Just be down-to-earth to prepare for an IT certification. Cisco 300-220 latest exam sample questions on our website are free to download for your reference. If you still want to find a valid dump, our website will be your beginning. Our Cisco 300-220 Latest Exam sample questions are a small part of our real products. If you think the free version is excellent, you can purchase our complete version.

To prepare for the exam, candidates can take advantage of a range of resources offered by Cisco, including training courses, study materials, and practice exams. The Cisco Learning Network is an excellent resource for candidates looking to learn more about the exam and connect with other cybersecurity professionals. There are also many third-party resources available, including books, online courses, and practice exams.

Cisco 300-220 Certification Exam is designed for professionals who want to demonstrate their knowledge and skills in conducting threat hunting and defending using Cisco Technologies for CyberOps. 300-220 exam is aimed at individuals who are interested in working in the cybersecurity industry and want to validate their proficiency in using Cisco technologies to prevent and mitigate cyber threats.

Perfect 300-220 Customizable Exam Mode Covers the Entire Syllabus of 300-220

Challenges are omnipresent everywhere. This challenge of 300-220 practice exam is something you do not need to be anxious with our 300-220 practice materials. If you make choices on practice materials with untenable content, you may fail the exam with undesirable outcomes. Our Conducting Threat Hunting and Defending using Cisco Technologies for CyberOps practice materials are totally to the contrary. Confronting obstacles or bottleneck during your process of reviewing, 300-220 practice materials will fix all problems of the exam and increase your possibility of getting dream opportunities dramatically.

Earning the Cisco 300-220 Certification is an excellent way for professionals to demonstrate their expertise in conducting threat hunting and defending using Cisco Technologies for CyberOps. Conducting Threat Hunting and Defending using Cisco Technologies for CyberOps certification can help professionals advance their careers by increasing their marketability and earning potential. Moreover, it can help organizations identify skilled and knowledgeable professionals who can help protect against cybersecurity threats.

Cisco Conducting Threat Hunting and Defending using Cisco Technologies for CyberOps Sample Questions (Q100-Q105):

NEW QUESTION # 100

_____ involves proactively searching through networks to detect and isolate advanced threats that evade existing security solutions.

- A. Network optimization
- B. Software development
- C. Compliance auditing

- D. Threat hunting

Answer: D

NEW QUESTION # 101

Why is it important for organizations to have trained threat hunters?

- A. Trained threat hunters do not add value to the security posture of an organization.
- B. Trained threat hunters can eliminate all security threats in the network.
- C. Organizations can save costs by not investing in threat hunting training.
- D. They can effectively detect and respond to sophisticated threats.

Answer: D

NEW QUESTION # 102

Refer to the exhibit.

```
1 sleep
2 encode
3 %02x %s?i=%s&c=%s&p=%s
4 APPDATA
5 Software\Microsoft\Windows\CurrentVersion\Run
6 brbbot
7 Mozilla/4.0 (compatible; MSIE 8.0; Windows NT 6.1; Trident/4.0)
8 HTTP/1.1 Connection: close
9 ZwQuerySystemInformation
10 ntdll.dll
11 RegSetValueExA
12 RegOpenKeyExA
13 RegDeleteValueA
14 RegFlushKey
15 RegCloseKey
16 CryptAcquireContextW
17 CryptDeriveKey
18 CryptReleaseContext
19 CryptEncrypt
20 CryptCreateHash
21 CryptDestroyKey
22 CryptDecrypt
23 CryptDestroyHash
24 CryptHashData
25 ADVAPI32.dll
26 InternetQueryDataAvailable
27 InternetReadFile
28 InternetCloseHandle
```

A security engineer notices that a Windows Batch script includes calls to suspicious APIs. How will the script affect the system when it is executed?

- A. The host version is retrieved.
- B. Files are encrypted.
- C. The internet connection is disabled.
- D. The host is put in sleep mode.

Answer: B

Explanation:

The correct answer is Files are encrypted. The exhibit shows a collection of API calls and strings that strongly indicate cryptographic operations associated with file encryption, a common behavior in ransomware and data-encrypting malware.

Key indicators in the script include multiple Windows Cryptographic API function calls such as:

- * CryptAcquireContextW
- * CryptCreateHash

- * CryptHashData
- * CryptDeriveKey
- * CryptEncrypt
- * CryptDecrypt
- * CryptDestroyKey
- * CryptReleaseContext

These APIs are part of the Windows CryptoAPI, which is explicitly used to generate cryptographic keys, hash data, and encrypt or decrypt content. The presence of ADVAPI32.dll further confirms cryptographic functionality, as this library provides access to Windows security and encryption services.

Additionally, registry-related APIs such as RegSetValueExA, RegOpenKeyExA, and references to:

Software\Microsoft\Windows\CurrentVersion\Run

indicate that the script may also establish persistence, ensuring the encryption routine executes again after reboot. However, persistence is secondary; the primary functional behavior shown is encryption.

Option A is incorrect because there are no APIs related to disabling networking (such as InternetSetOption or firewall manipulation). Option B is incorrect because retrieving host version information would involve system query APIs like GetVersionEx, which are not present. Option C is incorrect because although the word sleep appears, it is commonly used by malware to delay execution or evade sandboxes-not to place the system into sleep mode.

From a threat hunting and malware analysis perspective, the combination of CryptoAPI usage, registry modification, and internet-related APIs (InternetReadFile, InternetQueryDataAvailable) is a classic ransomware pattern: retrieve data or keys, encrypt local files, and possibly communicate with command-and-control infrastructure.

Professional defenders recognize these API patterns as high-confidence malicious indicators, often mapped to MITRE ATT&CK - Impact: Data Encrypted for Impact (T1486). Detecting such behavior early is critical to prevent widespread data loss and operational disruption.

In summary, the script's API usage clearly indicates that its execution results in file encryption, making Option D the correct answer.

NEW QUESTION # 103

The MITRE CAPEC database is best used for understanding:

- A. Firewall configurations
- B. Compliance requirements
- C. Common attack patterns
- D. Encryption standards

Answer: C

NEW QUESTION # 104

A tactic that indicates a sophisticated threat actor rather than a commodity malware campaign is:

- A. Scanning the internet for vulnerable servers
- B. Posting threats on social media
- C. Targeted spear-phishing emails
- D. Use of widely available exploit kits

Answer: C

NEW QUESTION # 105
