## SAP Certified Associate - Process Data Analyst - SAP Signavio Sample Questions (Q26-Q31):

### NEW QUESTION # 26

What are some filters that are available in the search function in SAP Signavio Process Collaboration Hub?Note: There are 3 correct answers to this question.

- A. Dictionary entries
- B. IT Systems

- C. Files
- D. Models
- E. Attributes

**Answer: A,C,D**

#### NEW QUESTION # 27

What is a Variant in Process Mining?

- A. A variant visualizes all tasks to complete the process.
- B. A variant is a set of attributes.
- C. A variant is a set of cases with the same sequence of tasks.
- D. A variant has different process flows.

**Answer: C**

Explanation:

In Process Mining, a Variant is defined as:

\* Option A (A variant is a set of cases with the same sequence of tasks.): This definition accurately captures the essence of what a variant represents in the context of process mining. Variants help in understanding how processes are executed by grouping cases that follow the same sequence of activities or tasks, thus allowing for the analysis of common process flows and identifying deviations or inefficiencies.

#### NEW QUESTION # 28

You are in the SAP Signavio Process Manager and want to get an overview about costs and resources. Which features do you use?

Note: There are 2 correct answers to this question.

- A. Reporting
- B. Analytics
- C. Simulation
- D. Value Widget

**Answer: A,C**

Explanation:

In SAP Signavio Process Manager, to get an overview of costs and resources, the features primarily used are Simulation and Reporting. Simulation allows users to model and predict how changes in the process will affect costs and resource utilization, enabling decision-makers to experiment with different scenarios and optimize process performance. Reporting, on the other hand, provides detailed analyses and overviews of current process metrics, including costs and resources, through customizable reports. These tools are instrumental in understanding and optimizing the efficiency and cost-effectiveness of business processes. The Value Widget and Analytics are valuable tools as well but are not primarily designed for detailed costs and resources overview. References: SAP Signavio Process Manager User Guide

#### NEW QUESTION # 29

What is the benefit of using Attribute Visualization Layers? Note: There are 2 correct answers to this question.

- A. Display attributes directly on the diagram canvas.
- B. Display attributes of the linked dictionary term.
- C. Display attributes in different colors based on their values.
- D. Display attributes categories above a task.

**Answer: A,C**

Explanation:

The use of Attribute Visualization Layers in SAP Signavio offers several benefits, including the ability to:

\* Option B (Display attributes in different colors based on their values): This feature allows users to quickly visualize variations in process attributes by color-coding them. It helps in identifying patterns or outliers within the process model, making it easier to analyze and interpret data directly from the diagram.

\* Option D (Display attributes directly on the diagram canvas): Attributes can be displayed directly on the process diagram, providing immediate context and details about process steps without needing to navigate away from the visual model. This enhances the comprehensibility and accessibility of process information directly within the visualization.

### NEW QUESTION # 30

What is a core capability of the transaction code analysis?

- A. It can show the various ways processes are executed in reality across the entire organization.
- B. It can check the number of transaction codes used on average for one end-to-end process.
- **C. It can check the number of transaction codes used on average for each process step and by company code.**
- D. It can show the average ways processes are executed in a particular company code.

**Answer: C**

### NEW QUESTION # 31

.....
