

Authoritative Nokia Free SRAN-Radio-Network-Performance-Optimization Updates and Useful SRAN-Radio-Network-Performance-Optimization Exam Introduction

AirScale 5G gNB Nokia

The 5G gNB Nokia is a modular solution based on AirScale Generation Hardware

The site will be deployed according to the configuration needed.

For 5G NB site, the solution will deploy :

- AirScale Module (ID) AMIA with :
- AirScale Module (OD) AMOD with :
- Radio Modules :

AMIA / AMOD	5G
System Modules	ASIK
Base Band Modules	ABIL

Active Antenna	
AEQE	• 5G NR 3.5 GHz

NOTE:
AEQE: Band 78 (64x 3.125 W max /TRX - 200 W max/ MAA)

© 2017 Nokia

Nokia Internal Use

NOKIA

AirScale 5G gNB Nokia

Configuration with AMIA or AMOD + AEQE

As we all know, respect and power is gained through knowledge or skill. The society will never welcome lazy people. Do not satisfy what you have owned. Challenge some fresh and meaningful things, and when you complete SRAN-Radio-Network-Performance-Optimization Exam, you will find you have reached a broader place where you have never reach. For instance, our SRAN-Radio-Network-Performance-Optimization practice torrent is the most suitable learning product for you to complete your targets.

In order to meet the time requirement of our customers, our experts carefully designed our SRAN-Radio-Network-Performance-Optimization test torrent to help customers pass the exam in a lot less time. We hope everyone can prepare for their exam with minimal time investment. If you purchase our MN: NCSS NPS - SRAN Radio Network Performance Optimization Certification Exam | GS40-NPS-SRPER-E-S03-2510 guide torrent, we can make sure that you just need to spend twenty to thirty hours on preparing for your exam before you take the exam, it will be very easy for you to save your time and energy. So do not hesitate and buy our SRAN-Radio-Network-Performance-Optimization study torrent, we believe it will give you a surprise, and it will not be a dream for you to pass your MN: NCSS NPS - SRAN Radio Network Performance Optimization Certification Exam | GS40-NPS-SRPER-E-S03-2510 exam and get your certification in the shortest time.

>> Free SRAN-Radio-Network-Performance-Optimization Updates <<

2026 Realistic Free SRAN-Radio-Network-Performance-Optimization

Updates - MN: NCSS NPS - SRAN Radio Network Performance Optimization Certification Exam | GS40-NPS-SRPER-E-S03-2510 Exam Introduction Free PDF

Many candidates failed exam before. They have no confidence for next exam and they also hesitate if they have to purchase valid SRAN-Radio-Network-Performance-Optimization brain dumps materials or if dumps are actually valid. Now I advise you download our free demo before you are determined to buy. Our free demo is a little of the real test, you can see several questions answers and explanations. You will know the validity of Nokia SRAN-Radio-Network-Performance-Optimization Brain Dumps materials.

Nokia MN: NCSS NPS - SRAN Radio Network Performance Optimization Certification Exam | GS40-NPS-SRPER-E-S03-2510 Sample Questions (Q25-Q30):

NEW QUESTION # 25

The slice type SST value for Extreme Broadband is typically:

- A. 0
- B. 1
- C. 2
- D. 3

Answer: A

Explanation:

The correct answer is B .

In 5G network slicing, SST means Slice/Service Type . It identifies the high-level service category of a network slice.

Typical standardized SST values are:

SST = 1 # eMBB, enhanced Mobile Broadband

SST = 2 # URLLC, Ultra-Reliable Low-Latency Communication

SST = 3 # MIIoT/mMTC, Massive IoT or massive Machine Type Communication

SST = 4 # V2X-related slice type

"Extreme Broadband" is normally aligned with eMBB , because it refers to high data rate, high capacity, and broadband user experience.

Therefore, the SST value for Extreme Broadband is:

1.

NEW QUESTION # 26

At which mark are all conditions fulfilled for energy saving , so the cell will be switched off? Refer to the image below.

□

- A. B
- B. E
- C. C
- D. D

Answer: C

Explanation:

The correct answer is B , which corresponds to mark C in the diagram.

In the diagram, the energy-saving process follows these stages:

Before mark B , the cell is entering the power-saving period, but the required load condition has not yet been satisfied for the required duration.

At mark B , the measured load has gone below the configured threshold, but the cell is not switched off immediately. The system must confirm that the load remains below the required threshold for the configured time.

At mark C , the load has stayed below the required threshold for the required duration, shown as 5 minutes in the diagram. At this point, all conditions are fulfilled, and the cell can be switched off. The diagram also shows the state becoming: `energySavingState = energySaving`

Marks D and E are already inside or near the later part of the power-saving period. Mark E is associated with operator

suspension/exit behavior, not the initial moment when all switch-off conditions are first fulfilled.

NEW QUESTION # 27

Single Network Slice Selection Assistance Information, or S-NSSAI, identifies a network slice. Which of the following statements are correct regarding NSSAI? Refer to the diagram for basic information.

- A. SST, or Slice/Service Type, is a mandatory numeric parameter that refers to defined slice characteristics.
- B. A, B, and C
- C. SD, or Slice Differentiator, pairs with SST, or Slice/Service Type, to uniquely define a slice.
- D. A, B, C, and D
- E. A and B
- F. SD, or Slice Differentiator, is an optional parameter that identifies or differentiates slices.
- G. The SST field may have standardized and non-standardized values.
- H. B, C, and D

Answer: G

Explanation:

The correct answer is D: A, B, C, and D.

In 5G network slicing, S-NSSAI identifies a single network slice. It is composed of

SST, or Slice/Service Type

SD, or Slice Differentiator

Statement A is correct.

The combination of SST + SD can uniquely identify a slice. For example, two slices may both use SST 1 for eMBB/MBB-type service, but different SD values can separate them for different enterprises, tenants, or service groups.

Statement B is correct.

SST is mandatory. It is an 8-bit numeric field that indicates the expected slice/service behavior, such as eMBB, URLLC, or mMTC.

Statement C is correct.

SD is optional. It is a 24-bit field used to differentiate multiple slices that may share the same SST.

Statement D is correct.

SST may use standardized values, such as SST 1 for eMBB, SST 2 for URLLC, and SST 3 for mMTC/MiOT.

It may also use operator-specific or non-standardized values depending on deployment requirements.

NEW QUESTION # 28

Evaluate the impact of using MantaRay SON's centralized PCI optimization module compared to distributed SON implementations.

- A. Distributed SON implementations provide better optimization benefits.
- B. Distributed SON implementations are more effective in handling multi-vendor networks.
- C. Centralized PCI optimization can identify and resolve PCI issues across multi-vendor networks.
- D. Centralized PCI optimization offers less visibility into network configuration.

Answer: C

Explanation:

The correct answer is C.

A centralized SON approach has broader network-level visibility than a purely distributed implementation.

For PCI optimization, this is important because PCI conflicts, PCI confusion, and neighbor-related PCI issues are not always local to one cell. They may involve several neighboring cells, multiple layers, and sometimes multiple vendors.

Nokia positions MantaRay SON as a centralized, AI-powered network optimization and automation platform for improving RAN quality, efficiency, and customer experience. Nokia also describes MantaRay SON as supporting multi-supplier/non-real-time RIC functionality in the MantaRay SMO framework.

So compared with distributed SON, centralized PCI optimization can better analyze wider-area PCI relationships and resolve PCI problems across multi-vendor or multi-layer networks.

Therefore, the correct statement is:

Centralized PCI optimization can identify and resolve PCI issues across multi-vendor networks.

NEW QUESTION # 29

When selecting an LTE anchor layer for EN-DC , why is it important to check 3GPP band combinations ?

- A. To ensure that LTE and NR bands are compatible and allowed as EN-DC pairs
- B. To avoid configuring LTE with higher bandwidths
- C. To guarantee dual-uplink transmission support for all UE models
- D. To reduce the number of BTS neighbors required for 5G integration

Answer: A

Explanation:

The correct answer is B .

In 5G NSA EN-DC , the UE connects to LTE as the Master Cell Group , or anchor, and NR as the Secondary Cell Group . Not every LTE band can be paired with every NR band. The supported LTE-NR combinations are defined by 3GPP band-combination rules and must also be supported by the UE chipset and device capability.

For example, an operator may have LTE Band 3, Band 7, or Band 20 and NR n78, but only certain LTE-NR combinations may be valid for EN-DC. If the selected LTE anchor band is not supported in combination with the NR band, the UE will not be able to establish EN-DC even if LTE and NR coverage both exist.

Option C is not correct because dual-uplink support depends on UE capability and specific band-combination support; it cannot be guaranteed for all UE models. Option A and D are unrelated to the main purpose of checking 3GPP band combinations.

So the correct reason is:

To ensure that LTE and NR bands are compatible and allowed as EN-DC pairs.

NEW QUESTION # 30

.....

With so many online resources, knowing where to start when preparing for an MN: NCSS NPS - SRAN Radio Network Performance Optimization Certification Exam| GS40-NPS-SRPER-E-S03-2510 (SRAN-Radio-Network-Performance-Optimization) exam can be tough. But with MN: NCSS NPS - SRAN Radio Network Performance Optimization Certification Exam| GS40-NPS-SRPER-E-S03-2510 (SRAN-Radio-Network-Performance-Optimization) practice test, you can be confident you're getting the best possible SRAN-Radio-Network-Performance-Optimization exam dumps. Prep4sures exam simulator mirrors the SRAN-Radio-Network-Performance-Optimization Exam-taking experience, so you know what to expect on SRAN-Radio-Network-Performance-Optimization exam day. Plus, with our wide range of Nokia SRAN-Radio-Network-Performance-Optimization exam questions types and difficulty levels, you can tailor your SRAN-Radio-Network-Performance-Optimization exam practice to your needs.

SRAN-Radio-Network-Performance-Optimization Exam Introduction: <https://www.prep4sures.top/SRAN-Radio-Network-Performance-Optimization-exam-dumps-torrent.html>

The SRAN-Radio-Network-Performance-Optimization exam questions and answers are updated frequently in order to assure its accuracy, Nokia Free SRAN-Radio-Network-Performance-Optimization Updates Are you still worried about your exam, We continually improve the versions of our SRAN-Radio-Network-Performance-Optimization study materials so as to make them suit all learners with different learning levels and conditions, Compared to other learning materials, our products are of higher quality and can give you access to the SRAN-Radio-Network-Performance-Optimization certification that you have always dreamed of.

For more on lightweight technology and what it means for small businesses, see this SRAN-Radio-Network-Performance-Optimization Intuit Future of Small Business Research report, You'll want to allow adequate slack for moving the computer and for avoiding strong interference sources.

Download Prep4sures Nokia SRAN-Radio-Network-Performance-Optimization Exam Dumps and Start Preparation

The SRAN-Radio-Network-Performance-Optimization Exam Questions And Answers are updated frequently in order to assure its accuracy, Are you still worried about your exam, We continually improve the versions of our SRAN-Radio-Network-Performance-Optimization study materials so as to make them suit all learners with different learning levels and conditions.

Compared to other learning materials, our products are of higher quality and can give you access to the SRAN-Radio-Network-Performance-Optimization certification that you have always dreamed of.

It's a Way of Learning that Suits You.
