Our company is a professional certificate exam materials provider, we have occupied in this field for years, and we are famous for offering high quality and high accurate Analytics-Admn-201 study materials. Moreover, we have a professional team to research the latest information of the exam, we can ensure you that Analytics-Admn-201 exam torrent you receive is the latest we have. In order to strengthen your confidence for Analytics-Admn-201 Exam Materials, we also pass guarantee and money back guarantee, and if you fail to pass the exam, we will refund your money. We have professional service stuff, and if you have any questions, you can consult them.

Salesforce Analytics-Admn-201 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> • Troubleshooting: This section of the exam measures the skills of Support Specialists and covers resolving common Tableau Server issues. Candidates must know how to reset accounts, package logs, validate site resources, rebuild search indexes, and use analysis reports. It also includes understanding the role of browser cookies and creating support requests when needed.
Topic 2	<ul style="list-style-type: none"> • Installation and Configuration: This section of the exam measures the skills of Server Engineers and covers the process of installing Tableau Server, understanding installation paths, identity store options, SSO integrations, SSL setup, and silent installs. Candidates also need to demonstrate the ability to configure Tableau Server by setting cache, distributing processes, customizing sites, and configuring user quotas. It further includes adding users, managing their roles and permissions, and applying Tableau's security model at different levels from sites to workbooks.
Topic 3	<ul style="list-style-type: none"> • Migration & Upgrade: This section of the exam measures the skills of System Engineers and covers the process of upgrading and migrating Tableau Server environments. Candidates should understand how to carry out clean reinstalls, migrate servers to new hardware, and maintain backward compatibility during the process.

Topic 4	<ul style="list-style-type: none"> • Connecting to and Preparing Data: This section of the exam measures the skills of Tableau Administrators and covers the basic understanding of Tableau Server's interface, navigation, and overall topology. Candidates are expected to recognize both client and server components, understand how these interact, and know where to find information about versions, releases, and updates. It also focuses on system requirements, including hardware, operating systems, browsers, email configurations, cloud considerations, and licensing models. Additionally, it examines knowledge of server processes, data source types, network infrastructure, and ports needed for a stable deployment.
Topic 5	<ul style="list-style-type: none"> • Administration: This section of the exam measures the skills of Tableau Administrators and covers the day-to-day tasks of maintaining Tableau Server. Candidates should understand how to create and manage schedules, subscriptions, backups, and restores, as well as how to use tools such as TSM, Tabcmd, and REST API. It emphasizes monitoring, server analysis, log file usage, and embedding practices. It also includes managing projects, sites, and nested structures, while contrasting end-user and administrator abilities. Knowledge of publishing, web authoring, sharing views, caching, and data source certification is also tested.

Latest Analytics-Admn-201 Dumps Questions, Test Analytics-Admn-201 Cram Review

During these years, our PDF version of our Salesforce Analytics-Admn-201 study engine stays true to its original purpose to pursue a higher pass rate that has never been attained in the past. And you will be content about our considerate service on our Salesforce Analytics-Admn-201 training guide. If you have any question, you can just contact us!

Salesforce Certified Tableau Server Administrator Sample Questions (Q54-Q59):

NEW QUESTION # 54

You have an installation of Tableau Server and a site that are configured to use default settings. What should you do to ensure that the users on the site can set up data-driven alerts?

- A. Change the data-driven alerts setting on the new site's Settings page
- B. Enable data-driven alerts on the Tableau Services Manager Configuration page
- C. No action is necessary: the default settings enable data-driven alerts for the site
- D. Run the tsm configuration set -k dataAlerts.checkIntervallnMinutes -v 60 command

Answer: A

Explanation:

Data-driven alerts in Tableau Server allow users to receive notifications when data in a view meets certain conditions (e.g., a sales metric exceeds a threshold). By default, this feature is disabled for a site unless explicitly enabled by an administrator.

Option C (Change the data-driven alerts setting on the new site's Settings page): This is the correct answer. In the Tableau Server web interface, a site administrator can navigate to the site's Settings > General page and enable the option "Let users create data-driven alerts." This must be done manually because the default setting for a new site is disabled. Once enabled, users with appropriate permissions (e.g., Viewer, Explorer, or Creator roles) can create alerts on views they have access to.

Option A (Enable data-driven alerts on the TSM Configuration page): This is incorrect because the TSM Configuration page (accessed via the TSM web UI or CLI) manages server-wide settings like ports, authentication, and processes, not site-specific features like data-driven alerts.

Option B (Run the tsm configuration set -k dataAlerts.checkIntervallnMinutes -v 60 command): This is incorrect. The dataAlerts.checkIntervallnMinutes key controls how frequently Tableau Server checks alert conditions (default is 60 minutes), but it does not enable the feature itself. The feature must first be turned on at the site level.

Option D (No action is necessary): This is incorrect because the default setting for data-driven alerts is off for new sites, requiring explicit action to enable it.

Reference: Tableau Server Documentation - "Configure Data-Driven Alerts" (https://help.tableau.com/current/server/en-us/data_alerts.htm).

NEW QUESTION # 55

What are two features of the Tableau Server user-based license? (Choose two.)

- A. A subscription license
- B. Restricts the number of machine cores you can deploy
- C. Enables distinct user roles
- D. A perpetual license

Answer: A,C

Explanation:

Tableau Server's user-based licensing model assigns licenses to individual users (Creator, Explorer, Viewer) rather than machines or cores. Key features include:

- * Subscription license: Licenses are typically subscription-based, renewed annually or monthly, aligning with Tableau's pricing model.
- * Distinct user roles: It supports three roles (Creator, Explorer, Viewer), each with specific capabilities, enabling granular access control.
- * Option A (A subscription license): Correct. User-based licenses are subscription-based by default.
- * Option B (Enables distinct user roles): Correct. The model defines Creator, Explorer, and Viewer roles.
- * Option C (Restricts the number of machine cores): Incorrect. This applies to core-based licensing, not user-based.
- * Option D (A perpetual license): Incorrect. Perpetual licenses were phased out; user-based licenses are subscription-based as of recent models.

Reference: Tableau Server Documentation - "Licensing Overview" (https://help.tableau.com/current/server/en-us/license_usage.htm).

NEW QUESTION # 56

What command should you run to update the automatically-generated secrets that are created during a Tableau Server installation?

- A. `tsm security regenerate-internal-tokens`
- B. `tsm licenses refresh`
- C. `tsm data-access caching set -r 1`
- D. `tsm security validate-asset-keys`

Answer: A

Explanation:

Tableau Server uses internal secrets (tokens) for secure communication between its processes (e.g., Repository, File Store). These are automatically generated during installation and can be regenerated if compromised or for security maintenance. The command to update these is:

- * `tsm security regenerate-internal-tokens`: This regenerates the internal security tokens, ensuring all processes use the new tokens after a restart.
- * Option C (`tsm security regenerate-internal-tokens`): Correct. This is the documented command for updating internal secrets.
- * Option A (`tsm data-access caching set -r 1`): Incorrect. This command configures caching behavior, not security tokens.
- * Option B (`tsm licenses refresh`): Incorrect. This refreshes license data, unrelated to internal secrets.
- * Option D (`tsm security validate-asset-keys`): Incorrect. This validates encryption keys for assets, not internal tokens.

Reference: Tableau Server Documentation - "Regenerate Internal Tokens" (https://help.tableau.com/current/server/en-us/cli_security.htm#regenerate-internal-tokens).

NEW QUESTION # 57

Which three methods should an administrator use to create a Tableau Server group or project? (Choose three.)

- A. REST API
- B. `tsm customize`
- C. `tabcmd`
- D. Tableau Server browser interface

Answer: A,C,D

Explanation:

Tableau Server provides multiple methods to create groups (collections of users) and projects (content containers), catering to UI, CLI, and programmatic needs. Let's dissect each option with depth:

- * Option B (Tableau Server browser interface): Correct.
 - * Groups: Go to Users > Groups > Add Group, name it, and optionally sync with Active Directory.
 - * Projects: Go to Content > Projects > New Project, set name, description, and permissions.
 - * Details: The web UI is intuitive, requiring server/site administrator rights. It's ideal for manual, ad-hoc creation with immediate visibility.
 - * Permissions: For projects, you can set default permissions or lock them here.
 - * Option C (tabcmd): Correct.
 - * Groups: `tabcmd creategroup "GroupName"` creates a local group. Add users with `tabcmd addusers "GroupName" --users "user1,user2"`.
 - * Projects: `tabcmd createproject -n "ProjectName" -d "Description"` creates a project.
 - * Details: `tabcmd` is a command-line tool for batch operations or scripting (e.g., automating group/project setup). It requires a server admin login (`tabcmd login`).
 - * Limitation: No AD sync via `tabcmd`-that's UI or REST API territory.
 - * Option D (REST API): Correct.
 - * Groups: Use the POST `/api/api-version/sites/site-id/groups` endpoint with a payload (e.g., `{'group': {'name': 'GroupName'}}`). Supports AD import too.
 - * Projects: Use POST `/api/api-version/sites/site-id/projects` (e.g., `{'project': {'name': 'ProjectName', 'description': 'Desc'}}`).
 - * Details: The REST API is programmatic, ideal for integration with external systems or bulk automation. Requires authentication via a token and server/site admin rights.
 - * Power: Offers full control, including nested projects and custom permissions.
 - * Option A (tsm customize): Incorrect.
 - * Purpose: `tsm customize` modifies TSM UI branding (e.g., logos, colors) via commands like `tsm customize --logo "path/to/logo.png"`.
 - * Why Wrong: It's unrelated to creating groups or projects-it's for cosmetic server configuration, not content/user management.
- Why This Matters: Offering UI, CLI, and API options ensures flexibility-manual for small tasks, automation for scale-critical in enterprise deployments.
- Reference: Tableau Server Documentation - "Manage Groups" (https://help.tableau.com/current/server/en-us/groups_create.htm), "Manage Projects" (https://help.tableau.com/current/server/en-us/projects_create.htm), "tabcmd Commands" (https://help.tableau.com/current/server/en-us/tabcmd_cmd.htm), "REST API Reference" (https://help.tableau.com/current/api/rest_api/en-us/REST/rest_api_ref.htm).

NEW QUESTION # 58

What is the minimum required free hard disk space recommended for a Tableau Server installation in production?

- A. 50 GB
- B. 64 GB
- C. 15 GB
- D. 32 GB

Answer: A

Explanation:

Tableau Server has specific hardware requirements for production environments to ensure stability and performance. The minimum recommended free disk space for a production installation is 50 GB. This accounts for:

- * The installation itself (approximately 1-2 GB).
- * Space for log files, temporary files, and extracts managed by the File Store and Data Engine.
- * Room for backups and operational overhead.

The full minimum hardware recommendations for a single-node production deployment are:

- * 8 CPU cores (2.0 GHz or faster).
- * 32 GB RAM.
- * 50 GB free disk space (on the system drive, typically C: on Windows).
- * Option A (32 GB): Incorrect. While 32 GB is the minimum RAM requirement, it's insufficient for disk space in production.
- * Option B (50 GB): Correct. This matches Tableau's official recommendation for production environments.
- * Option C (15 GB): Incorrect. 15 GB is the minimum for a non-production or trial installation, not production.
- * Option D (64 GB): Incorrect. While 64 GB exceeds the minimum, it's not the specified requirement-50 GB is sufficient.

Reference: Tableau Server Documentation - "Minimum Hardware Recommendations" (<https://help.tableau.com>).

com/current/server/en-us/requirements.htm).

NEW QUESTION # 59

.....

In the present situation, you will find companies laying off their employees without any notice or prior information. They are just receiving an email and the next moment they have no access to the company network. So to avoid all this, you have to keep yourself updated with the new version of technologies and applications. You have to become one of Salesforce Certified Tableau Server Administrator (Analytics-Admn-201) certification holders who survived the laying off situation and are still in a great position in their company. You cannot afford to lose it when you need your job the most.
