

Plat-Dev-301 Reliable Dumps Free - Latest Plat-Dev-301 Test Online

P.S. Free & New Plat-Dev-301 dumps are available on Google Drive shared by BraindumpsIT: <https://drive.google.com/open?id=10hhUISKeUZlaCPRjhQrw4u83QxIcM592>

After paying our Plat-Dev-301 exam torrent successfully, buyers will receive the mails sent by our system in 5-10 minutes. Then candidates can open the links to log in and use our Plat-Dev-301 test torrent to learn immediately. Because the time is of paramount importance to the examinee, everyone hope they can learn efficiently. So candidates can use our Plat-Dev-301 Guide questions immediately after their purchase is the great advantage of our product. It is convenient for candidates to master our Plat-Dev-301 test torrent and better prepare for the Plat-Dev-301 exam.

Salesforce Plat-Dev-301 Exam Syllabus Topics:

Section	Objectives
	- Deployment lifecycle 1. Change sets and deployment tools 2. Version control and CI/CD concepts
Topic 1: Testing and Deployment	- Testing strategies 1. Test data creation and mocking 2. Code coverage and quality practices

- Advanced data modeling
 - 1. Complex relationships and schema design
 - 2. Large data volume considerations

Topic 2: Data Modeling and Management

- Data access and security
 - 1. Sharing rules and Apex-managed sharing
 - 2. Security enforcement in Apex
- External system integration
 - 1. REST and SOAP API usage
 - 2. Callouts from Apex

Topic 3: Integration and APIs

- Platform events and messaging
 - 1. Change Data Capture concepts
 - 2. Event-driven architecture
- Asynchronous processing
 - 1. Batch Apex and Queueable Apex
 - 2. Scheduled Apex
 - 3. Future methods and limits considerations

Topic 4: Application Development

- Advanced Apex programming
 - 1. Apex design patterns and best practices
 - 2. Dynamic Apex and metadata-driven development
 - 3. Exception handling and debugging strategies

Latest Salesforce Plat-Dev-301 Test Online & New Plat-Dev-301 Exam Topics

BraindumpsIT has a huge team of IT experts, who continue to use their knowledge and experience to study a lot of IT certification examination papers of past few years. Their findings of the research is now the product of BraindumpsIT, therefore BraindumpsIT's Salesforce Plat-Dev-301 Practice Questions are very similar with the real exam, which can help a lot of people to realize their dreams. BraindumpsIT can ensure you to successfully pass the exam, and you can boldly Add BraindumpsIT's products to your shopping cart. With BraindumpsIT your dreams can be achieved immediately.

Salesforce Certified Platform Developer II - Multiple Choice Sample Questions (Q113-Q118):

NEW QUESTION # 113

A developer used custom settings to store some configuration data that changes occasionally. However, tests are now Failing in some of the sandboxes that were recently refreshed.

What should be done to eliminate this issue going forward?

- **A. Replace custom settings with custom metadata.**
- B. Set the setting type on the custom setting to List.
- C. Set the setting type on the custom setting to Hierarchy.
- D. Replace custom settings with static resources.

Answer: A

Explanation:

Replacing custom settings with custom metadata types is a good solution to ensure that test data is consistent across environments. Custom metadata types are deployable, and their records are available in test methods by default, unlike List Custom Settings which

need to be manually recreated in each environment after a refresh.

NEW QUESTION # 114

A company has a Lightning page with many Lightning Components, some that cache reference data. It is reported that the page does not always show the most current reference data.

What can a developer use to analyze and diagnose the problem in the Lightning page?

- A. Salesforce Lightning Inspector Event Log tab
- **B. Salesforce Lightning Inspector Storage tab**
- C. Salesforce Lightning Inspector Transactions tab
- D. Salesforce Lightning Inspector Actions tab

Answer: B

Explanation:

The Storage tab in the Salesforce Lightning Inspector can be used to view and manage data stored on the client side, such as in the cache. This is useful for diagnosing issues related to stale or outdated cache data that may prevent the most current reference data from displaying.

NEW QUESTION # 115

A developer is working on an integration between Salesforce and an external system. The integration requires sending a large amount of data to the external system, which can cause long response times and timeouts.

To optimize the performance and avoid timeouts, which technique should be used?

- A. Use the `@future` annotation to make the callout asynchronous.
- B. Use a chained batch Apex to split the data into smaller batches.
- C. Increase the timeout limit in the callout options.
- **D. Implement an asynchronous callout using the Continuation class.**

Answer: D

Explanation:

Implementing an asynchronous callout using the Continuation class is the optimal solution to handle long response times and avoid timeouts in Salesforce. It allows the Apex code to make a long-running request to an external service and free up the thread to serve other requests.

NEW QUESTION # 116

There are user complaints about slow render times of a custom data table within a Visualforce page that loads thousands of Account records at once.

What can a developer do to help alleviate such issues?

- A. Use the transient keyword in the Apex code when querying the Account records.
- B. Upload a third-party data table library as a static resource.
- C. Use JavaScript remoting to query the accounts.
- **D. Use the standard Account List controller and implement pagination.**

Answer: D

Explanation:

Implementing pagination using the standard Account List controller in Visualforce is a proven method to improve performance when displaying large sets of data. Pagination allows only a subset of records to be fetched and displayed at a time, thereby reducing the load time of the page.

NEW QUESTION # 117

A developer gets an error saying 'Maximum Trigger Depth Exceeded.'

What is a possible reason to get this error message?

- A. There are numerous DML operations in the trigger logic.
- B. A flow trigger was included too many times.
- C. The SOQL governor limits are being hit.
- D. A trigger is recursively invoked more than 16 times.

Answer: D

Explanation:

The "Maximum Trigger Depth Exceeded" error message is typically caused by a trigger being recursively invoked too many times. Salesforce has a limit on the depth of trigger recursion to prevent infinite loops, which is 16 times.

NEW QUESTION # 118

.....

Do you worry about not having a long-term fixed study time? Do you worry about not having a reasonable plan for yourself? Plat-Dev-301 exam dumps will solve this problem for you. Based on your situation, including the available time, your current level of knowledge, our study materials will develop appropriate plans and learning materials. You can use Plat-Dev-301 test questions when you are available, to ensure the efficiency of each use, this will have a very good effect. You don't have to worry about yourself or anything else. Our study materials allow you to learn at any time. Regardless of your identity, what are the important things to do in Plat-Dev-301 Exam Prep, when do you want to learn when to learn?
