Salesforce Order-Management-Administrator Prüfungsplan:

Thema	Einzelheiten
Thema 1	• Advanced Topics: This topic challenges the Salesforce Order Management Administrator Consultant to diagnose and resolve configuration issues that hinder the launch or operation of Order Management processes. Proficiency includes troubleshooting integration problems and articulating how various processes interact to support successful deployments and system functionality.

Thema 2	• Deployment and Debugging: In this area, aspiring order management administrator consultant demonstrates a deep understanding of deployment options, life cycles, and the configuration of supporting objects. This includes creating processes from scratch, leveraging pre-set data, and validating results in runtime scenarios.
Thema 3	• User Experience and Customization: This section emphasizes leveraging Salesforce's Lightning UI to enhance user experiences. The Salesforce Order Management Administrator Consultant will customize experiences for users and managers through tools like the Lightning Page Editor, Report Builder, and out-of-the-box components. Success in this area ensures optimized workflows and improved operational efficiency.

Salesforce Order Management Administrator Accredited Professional Order-Management-Administrator Prüfungsfragen mit Lösungen (Q43-Q48):

43. Frage

Which three statements are true about change sets?

- A. Change sets can contain only modifications made through the Setup menu
- B. Changes can be deployed to any instance of Salesforce as long as the destination has approved it
- C. A change request should be created when the admin wants to send customizations from the current org to another org
- D. Change sets can only be sent between orgs that are affiliated with a production org
- E. Sending a change set between two orgs requires a deployment connection

Antwort: A,D,E

Begründung:

Three statements that are true about change sets are:

Sending a change set between two orgs requires a deployment connection. A deployment connection is a link between two orgs that allows one org to send change sets to another org.

Change sets can only be sent between orgs that are affiliated with a production org. A production org is an org that is used for live operations and data, and it can have one or more sandbox orgs that are used for development and testing. Change sets can only be sent from a sandbox org to its associated production org, or from one sandbox org to another sandbox org that shares the same production org.

Change sets can contain only modifications made through the Setup menu. A change set is a collection of metadata components that can be deployed from one org to another. Metadata components are customizations that are made through the Setup menu, such as custom objects, fields, workflows, etc.

44. Frage

A user wants to review credit card payment data for a specific Order. Which object should the employee navigate to?

- A. Payment

- B. Order Payment Summary
- C. Payment Method
- D. Order

Antwort: B

Begründung:

Explanation

The object that the user should navigate to to review credit card payment data for a specific Order is Order Payment Summary. An Order Payment Summary is a record that represents a payment made for an order or part of an order. An Order Payment Summary has a lookup relationship to both Order Summary and Invoice objects, and it contains information such as the payment amount, method, status, etc. Verified References: https://help.salesforce.com/s/articleView?id=sf.order_management_order_payment_summary.htm&t

45. Frage

An administrator suspects that recent changes to a flow have created a defect. The administrator wants to test the flow with input data that they believe will cause the error. What can the developer do next?

- A. Open the Flow, Select Debug, Provide the input values, Select Run
- B. Open the Flow and select Attach to Live Session. Provide the Session Id. Select Attach
- C. Open the Flow and select Attach to Live Session and Provide the Order Number
- D. Open the Flow, Select Debug with inputs. Provide the input values, select Run

Antwort: D

Begründung:

Debugging a flow with input data allows the administrator to test the flow with specific values and see how the flow behaves. The Debug with inputs option is available in the Flow Builder toolbar and lets the administrator provide input values for each flow variable before running the flow. Verified Reference: https://help.salesforce.com/s/articleView?id=sf.flow_builder_debug.htm&type=5

46. Frage

Where should a service agent go first to initiate changes related to an Order in Order Management?

- A. Fulfillment Order Details
- B. Order Summary Details
- C. Order Details
- D. Change Order Details

Antwort: B

Begründung:

A service agent should go first to the Order Summary Details page to initiate changes related to an order in Order Management. The Order Summary Details page provides a global view of the entire order lifecycle, including order capture, fulfillment, shipping, payment, invoicing, and service. From this page, a service agent can access various actions and flows to process changes such as cancellations, returns, exchanges, reshipments, refunds, and discounts. The service agent can also view related records such as Order, Fulfillment Orders, Shipments, Invoices, Credit Memos, and Change Orders. 47. Frage

Which three objects are likely to get created in Order Management as an order progresses through its lifecycle?

- A. Return Order
- B. Change Order
- C. Fulfillment Order
- D. Replacement Order
- E. rmaorder

Antwort: A,B,C

Begründung:

Explanation

Three objects that are likely to get created in Order Management as an order progresses through its lifecycle are:

Fulfillment Order. A Fulfillment Order is a record that represents a group of products in an order that are fulfilled together from the same location. A Fulfillment Order has a lookup relationship to the Order Summary object, and it contains information such as the fulfillment location, delivery method, status, etc.

Return Order. A Return Order is a record that represents a return request for an order or part of an order.

A Return Order has a lookup relationship to both Order Summary and Change Order objects, and it contains information such as the return reason, status, date, etc.

Change Order. A Change Order is a record that represents a change request for an order or part of an order. A Change Order has a lookup relationship to the Order Summary object, and it contains information such as the change type, status, date, etc.
