What's more, part of that Dumpleader EMT dumps now are free: [https://drive.google.com/open?id=1xelea8\\_5nvs0rt\\_9uBrb8lo5pSmi6Axo](https://drive.google.com/open?id=1xelea8_5nvs0rt_9uBrb8lo5pSmi6Axo)

One of the advantages of taking the Dumpleader Emergency Medical Technicians Exam (EMT) practice exam (desktop and web-based) is that it helps applicants to focus on their weak areas. It also helps applicants to track their progress and make improvements. NREMT EMT Practice Exams are particularly helpful in identifying areas where one needs more practice.

## There are the Problems in taking the Test Prep EMT Exam

The NREMT focuses on many technologies that's why it is getting more and more fame in the Medical sector within a short span. Therefore by this increases the difficulty of passing the NREMT exam. Candidates should pass the NREMT in order to survive in the Medical field. Dumpleader provides latest and valid NREMT Certified questions. This **Test Prep EMT exam dumps** have been verified and reviewed by the EMT professionals and experts. Dumpleader provides what others won't provide you.

Dumpleader **Test Prep EMT exam dumps** have the latest and verified questions which will be asked in the real exam. Dumpleader offers you authentic NREMT questions. Apart from this we also provide the Test Prep EMT Practice Test which includes all the practice questions for the NREMT exam, **Test Prep EMT exam dumps** that will ensure 100% passing surety and the simple user interface of NREMT practice test. Our hired professionals who passed their EMT well contribute to making **Test Prep EMT exam dumps** updated with NREMT new questions to ensure candidates to clear their NREMT certification at first attempt. Candidates can achieve the best result in the NREMT they need to experience the types of NREMT question they will be asked to answer and prepare for the NREMT test from **Test Prep EMT exam dumps** for each and every topic.

## New EMT Test Preparation Professional Questions Pool Only at Dumpleader

All three formats of NREMT EMT practice test are available with up to three months of free NREMT EMT exam questions updates, free demos, and a satisfaction guarantee. Just pay an affordable price and get NREMT EMT updated exam dumps today. Best of luck!

### NREMT Emergency Medical Technicians Exam Sample Questions (Q12-Q17):

#### NEW QUESTION # 12

A 9-year-old patient who was injured in an MCI is brought to the treatment area with a delayed triage tag. Which of the following signs or symptoms would the EMT expect to find? Select the three correct options.

- A. Palpable pulses being present
- B. Mottled skin
- C. Follows simple commands
- D. Breathing only after opening the airway
- E. Respiratory rate of 16
- F. Ability to ambulate

**Answer: A,C,F**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

In pediatric START or JumpSTART triage, a "delayed" status is appropriate if the child is breathing adequately, has palpable pulses, and follows commands. The respiratory rate of 16 is normal for a 9-year-old, and being able to walk also supports the "delayed" tag.

"Mottled skin" and "breathing only after airway opening" would more likely lead to "immediate" or even "expectant" categories depending on associated symptoms.

#### NEW QUESTION # 13

An infectious disease spread by the fecal-oral route that is considered an acute infection with a currently available vaccine is

- A. Hepatitis E
- B. Hepatitis C
- C. Hepatitis A
- D. Hepatitis B

**Answer: C**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Hepatitis A is transmitted primarily via the fecal-oral route, often through contaminated food or water. It leads to a acute liver infection, not a chronic condition. Unlike Hepatitis C, which has no vaccine, Hepatitis A has an effective vaccine and is preventable with proper hygiene and immunization.

Hepatitis B is spread through blood and sexual contact, not fecal-oral. Hepatitis E is also fecal-oral but is rare in the U.S. and doesn't have a widely used vaccine.

#### NEW QUESTION # 14

A 78-year-old female tripped and fell while walking. Her left leg is rotated externally and shorter than her right leg. You should

suspect

- A. Proximal femur fracture
- B. Posterior hip dislocation
- C. Pelvic fracture
- D. Colles' fracture

**Answer: A**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

An externally rotated, shortened leg is a classic sign of proximal femur fracture, specifically a femoral neck or intertrochanteric fracture, commonly seen in elderly fall patients. This presentation reflects muscle pull and fracture displacement.

\* Posterior hip dislocations cause internal rotation.

\* Pelvic fractures may cause instability but not specific leg rotation/shortening.

\* Colles' fracture is a distal radius (wrist) injury, unrelated to leg trauma.

### NEW QUESTION # 15

A 3-year-old female choked while eating a hot dog and then became unresponsive. You should first

- A. Check her carotid pulse
- B. Perform a head tilt-chin lift maneuver
- C. Begin chest compressions
- D. Deliver two rescue breaths

**Answer: C**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

According to Pediatric Basic Life Support (PALS) guidelines by the American Heart Association (AHA), when a child becomes unresponsive due to foreign body airway obstruction (FBAO), the immediate next step is to begin chest compressions. This is done before checking the airway or giving breaths because the airway is presumed obstructed. The compressions may dislodge the object.

After 30 compressions, open the airway and check for visible objects. If none are seen, attempt rescue breaths.

This protocol reflects the high risk of complete airway blockage in children with sudden collapse following a choking episode.

### NEW QUESTION # 16

A 38-year-old patient is unconscious with slow, shallow, and gasping breaths. The patient is not moving.

What should the EMT perform first?

- A. Perform a secondary assessment
- B. Assess the airway
- C. Auscultate breath sounds
- D. Check a carotid pulse

**Answer: B**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

In any unresponsive patient, the first step is to assess and open the airway to determine patency and identify obstruction or inadequate breathing.

Gasping respirations (agonal) are not effective; they require BVM ventilation support. The airway must be open before checking for a pulse or performing auscultation. A secondary assessment is performed only after primary survey and stabilization.
