Whether you're a developer, administrator, or consultant, this certification can help you take your skills to the next level and advance your career. With the right preparation and study materials, you can pass the exam and become a Salesforce Certified Platform App Builder.

Salesforce Certified Platform App Builder Sample Questions (Q191-Q196):

NEW QUESTION # 191

Universal Containers wants to display the real-time stock price for each Account on the Account record page. How should an app builder implement this request?

- A. Build a Flow that uses API calls.
- **B. Create a Lightning Web Component.**
- C. Use a scheduled Apex job.
- D. Install a solution from the AppExchange.

Answer: B

Explanation:

The best way to implement this request is to create a Lightning Web Component that can fetch the real-time stock price from an external API and display it on the Account record page. Installing a solution from the AppExchange may not be feasible as it may not match the exact requirements or may have additional costs. Building a Flow that uses API calls may not be efficient as it may consume API limits and may not be able to update the stock price in real-time. Using a scheduled Apex job may not be suitable as it may not be able to run frequently enough to reflect the real-time stock price

NEW QUESTION # 192

Universal Containers is using a custom app to record performance review info for their employees. The performance review should be visible to the employee and the employee's manager, as well as the HR director. How can this be configured? Choose 1 answer.

- A. Use manager sharing to enable sharing with the employee's manager and HR director
- B. Set the org wide default for Performance Review to private and add a criteria based sharing rule to share performance review records with a public group that includes the employee managers and HR director
- **C. Set the org wide default for Performance Review to private, do not use grant access using hierarchies and use manual sharing for the employee manager and HR director**
- D. Set the org wide default for Performance Review to private and use grant access using hierarchies to give visibility to the employee's manager and HR director

Answer: C

NEW QUESTION # 193

Cloud Kicks (CK) keeps track of its shoe inventory in Salesforce. When an order's status is changed to Activated, the inventory for the ordered shoe is reduced. At that point, a SOAP web service on the CK website must be called so that the website is updated to display the correct inventory amount for the shoe.

What should an app builder use to communicate to the CK web service when a shoe's inventory has changed?

- A. Before-Save Record-Triggered flow
- **B. After-Save Record-Triggered flow**
- C. Workflow rule
- D. Process Builder

Answer: B

Explanation:

Explanation

To communicate to the CK web service when a shoe's inventory has changed, an app builder should use an after-save record-triggered flow. An after-save record-triggered flow is a type of flow that runs after a record is saved and can perform actions such as updating related records, sending emails, calling external services, etc. An after-save record-triggered flow can use an Apex action to invoke a SOAP web service using a WSDL file. NEW QUESTION # 194

AW Computing uses a private sharing model for opportunities. Whenever an opportunity with a type of Service Agreement is created, all users in the Service Manager role should be able to view the opportunity.

Which tool should AW Computing use to accomplish this?

- A. Manual sharing
- B. Owner-based sharing rules
- **C. Criteria-based sharing rules**
- D. Apex sharing rules

Answer: C

Explanation:

Criteria-based sharing rules are the best tool to use for automatically sharing records based on specific criteria, such as the opportunity type being "Service Agreement." This rule can share opportunities with all users in a particular role, such as the Service Manager role, when the criteria are met, thereby adhering to the private sharing model while still providing necessary access.

* A: Owner-based sharing rules focus on the record owner's role or group, not the record type.

* C: Apex sharing is used for more complex scenarios not easily handled by declarative sharing settings.

Reference: Using Criteria-Based Sharing Rules on Salesforce Help

NEW QUESTION # 195

Which statement is true about field update actions from workflow rules and approval processes? Choose 2 answers

- A. Field updates are tracked in the history related list of a record regardless of whether or not History tracking is set for those fields.
- **B. Field updates to records based on workflow rules and approval processes do not trigger validation rules**
- **C. Field update with "re-evaluate workflow rules" selected can cause a recursive loop if the updated field is included in a workflow.**
- D. Field update are not available on currency field if the organization uses multi-currency.

Answer: B,C
